D-Link Introduces New 1.3 Megapixel Surveillance Camera For Home or Office Video Monitoring and Recording

Wired or Wireless Megapixel Cameras Enable High Resolution Remote Monitoring of Home or Office by Logging into Computers with Internet Access

SYDNEY, Aust., April 14, 2009 – D-Link, the end-to-end networking solutions provider for business and consumers, today announced it is now shipping its new Megapixel Cameras for high resolution remote monitoring of the home or office, providing an all-in-one solution for creating a surveillance camera network over an existing wired or Wi-Fi network.

With easy network setup, The D-Link® DCS-2121 Wireless Megapixel Camera wirelessly connects quickly and easily to a home or office network to enable remote video viewing. With its compact and sleek design and integrated Wi-Fi capability, the DCS-2121 can be mounted in places that were previously inaccessible, such as ceilings and walls.

The DCS-2121 can be accessed remotely and controlled from any PC or notebook over the local network or through the Internet via a web browser.

Unlike a standard webcam, the DCS-2121 is a complete system with a built-in CPU and web server that transmit high quality video images for security and surveillance. It supports simultaneous MJPEG and MPEG-4 high quality video streams allowing optimisation of both image quality and bandwidth efficiency.

"D-Link's Megapixel Cameras offer a very powerful security solution for homes and offices, providing high resolution images and high end surveillance features at an affordable price," said Maurice Famularo, Marketing Director for D-Link Australia and New Zealand. "In many ways they are superior to a traditional closed circuit camera system because users can log in and view high quality streaming video from any computer with Internet access."

The camera allows both taking snapshots and recording directly from the Web browser to a local hard drive without installing any software. Direct recording to a local network area storage device is also supported without the use of a dedicated PC for storing recorded video.

The Megapixel Camera also comes with motion detection features to trigger recording and sending e-mail alerts for a complete home or office security solution. Full Duplex 2-Way Audio allow users to listen and talk at the same time when connected to an external speaker.

D-ViewCam™2.0 camera surveillance software is included with the camera to enable the simultaneous viewing of up to 32 cameras with a wide range of remote control features. The powerful, easy to use surveillance software provides users with a wide array of features including video recording and playback, Video mode, Map mode, Wizard mode, Expert mode, Event Action and more.

Price and Availability

The D-Link DCS-2121 Wireless Megapixel Camera is available now. There is also a wired-only version available, the DCS-2102 Megapixel Camera, which connects to a home or office network using standard Ethernet network cables. Both the DCS-2121 and DCS-2102 are available now with recommended retail prices of AU\$399.95 inc. GST and NZ\$540 inc. GST.
