

## **D-LINK FIRST TO LAUNCH NEW ONLINE NETWORK CONFIGURATOR**

New D-Link Configurator Provides a Streamlined Interface, making it the Ideal Tool for Building a Virtual Network for the home or business.

**Sydney & Auckland, June 9, 2005** — D-Link, a global leader in the design, development, and manufacturing of networking, broadband, wireless, and communications technologies for the SOHO, SMB and enterprise markets, today announced that it has launched its new web based network configurator.

"The aim of the configurator is quite simple . . . build and design your own network", said Maurice Famularo, D-Link Marketing Director Australia and New Zealand.

"The SOHO portion is designed for smaller networks of between 2 and 7 computers, which is typical for a home/study or a small office/home office environment. The Small to Medium Business portion is designed for slightly larger less complex networks", said Famularo.

The primary idea behind the Network Builder is to enable the user to input certain criteria about their existing or intended network and produce a list of suggested hardware to enable them to build their proposed network.

So what can the user do with the information? Simple, the user can graphically see what the network looks like and can print out a shopping list to take out to their preferred reseller/retailer.

Our intended aim is to educate as well as inform users about various network configurations. Resellers and especially retailers should benefit from this by assisting their customers design a network.

You can view the Network Configurator on our web sites [www.dlink.com.au](http://www.dlink.com.au) or [www.dlink.co.nz](http://www.dlink.co.nz).

END.....
