

### D-LINK WIRELESS POCKET ROUTER

#### "THE WORLD IS IN YOUR POCKET"

Portable D-Link Wireless Pocket Router/AP is much smaller than a PDA, Features Three Operating Modes and Ships with a Convenient Carrying Case for a Complete Wireless Solution to the Mobile Workforce

**Sydney & Auckland, April 11, 2005** — D-Link, a global leader in the design, development, and manufacturing of networking, broadband, wireless, and communications technologies for the SOHO, SMB and enterprise markets, today announced the D-Link **DWL-G730AP** AirPlus®G Wireless Pocket Router/AP, a portable wireless networking solution for business travellers wanting to access and share hotel Internet connections, wirelessly connect Ethernet devices or secure shared information from potential hackers.

The D-Link Wireless Pocket Router/AP is much smaller than your average PDA, measures 80mm x 60mm x 17mm and ships with a convenient carrying case to make it a complete and compact wireless networking solution. For added mobility, the D-Link Wireless Pocket Router/AP can be powered over USB if power outlets are not available.

"Staying connected while on the road is crucial in today's business environment," said Maurice Famularo, D-Link Marketing Director Australia and New Zealand. "With its small footprint and three-in-one functionality, the D-Link Wireless Pocket Router/AP is the perfect connectivity companion for the business traveler."

The D-Link Wireless Pocket Router/AP (**DWL-G730AP**) is a convenient and portable network device that offers today's traveler the flexibility of connecting computers to share files and hotel Internet access, wirelessly connect any Ethernet-equipped to a 802.11b/g network or protect computers and files from hackers and other intruders that are sharing a public connection, such as hot spot Internet access locations.

The D-Link Wireless Pocket Router/AP provides business travelers with a simple and flexible wireless network no matter where they travel. A small switch on the back of the unit allows users to easily select one of the three wireless modes: Router/Firewall, Access Point and Wireless Client modes. The integrated Router mode features a robust firewall suite, an internal DHCP server that automatically assigns IP addresses to multiple connected devices, supports VPN Pass-through and includes a set of robust firewall features, including Network Address Translation (NAT) and MAC filtering. While in Access Point mode, the Wireless Pocket Router/AP can connect multiple wireless devices, such as laptops and PDAs, to a single Internet connection, be it a hotel or a conference room location. The Wireless Pocket Router/AP can make any Ethernet-equipped device wireless without installing software or configuring network settings, drawing power from either a wall receptacle or from the included Power-Over-USB adapter.

## Press News Release

*Immediate release*

The D-Link Wireless Pocket Router/AP supports WPA-PSK, as well as 64/128 WEP encryption to secure your wireless data communications, keeping it safe from prying eyes. In Access Point mode, the D-Link Wireless Pocket Router/AP adds support for 802.1x user authentication with an external RADIUS server, making it transferable from multiple office environments.
