### **D-Link Announces NEW Certified Network Engineer Training Course For Channel Partners and Resellers**

**Sydney, 15 March, 2006** - D-Link, the global leader in design, development and manufacturing of networking, broadband, wireless and communications technologies, today announced a NEW training programme for Resellers, System Integrators and Network Engineers looking to stay in touch with the company's networking technology.

The D-Link Certified Network Engineer (DCNE) two-day technical training course will replace the company's DCE certification programme and provide participants with D-Link recognition as certified professionals in their chosen discipline(s) (Security, Switch and/or Wireless).

The course is designed specifically for Channel Partner and Reseller Network Technicians, Administrators and support staff and includes the following modules:

- Network Basics and Theory
- LAN and Switches
- Wireless LAN
- Network Security.

In commenting on the launch of the programme, Maurice Famularo, Marketing Director of D-Link Australia and New Zealand said: "As a company completely committed to our Channel we are continually looking for new and interesting ways to keep our partners up to date with the latest D-Link product news and advancements.

"In developing this particular DCNE Training Course we made it a priority to reach beyond our channel partners and also understand the businesses and people *they* serve. Using the knowledge gained from this effort as a guide, we have restructured

our training system to focus on providing partners and resellers with the education and experience they need to effectively satisfy the networking demands of their own partners and customers. I believe the Course will be a great success and look forward to kick-off next month in Melbourne," said Famularo.

An added incentive for D-Link Channel Partners and Resellers to participate in the new DCNE Training Course is the \$250 redemption voucher offered to each and every programme partaker.
