D-Link Unleashes Highest Performance Draft 802.11n Router

D-Link® DGL-4500 Xtreme N™ Router Features Award-Winning Technologies for the Ultimate Online Experience

SYDNEY, Aust., March 6, 2008 – D-Link, the end-to-end networking solutions provider for business and consumers, today introduced the highest performance model in its successful Xtreme N™ router range, the DGL-4500 Xtreme N™ Router with built-in Quality of Service (QoS) technology and Network Activity Display.

The D-Link® DGL-4500 Xtreme N Router offers the power of D-Link Draft 802.11n Wi-Fi combined with an updated version of D-Link's award-winning QoS technology. This intelligent packet processing engine is integrated directly in the router, giving applications such as streaming video, VoIP and online games priority for bandwidth over other Internet applications, e-mail and FTP transfers. These technological advancements boost application performance to maximum speeds to provide the ultimate "no lag" experience.

"Our latest Xtreme N Router surpasses the high-performance demands of today's online applications with the fusion of D-Link QoS technology, Gigabit ports and the latest Draft 802.11n wireless local area network (WLAN) connectivity," said Maurice Famularo, Marketing Director, D-Link Australia & New Zealand. "For serious online applications such as streaming video and online gaming, where every millisecond counts, users need the fastest router available. This is that router.

"Users will also enjoy the luxury of having an on-board OLED display to quickly monitor settings and performance to keep their home or small office network running at its peak."

The D-Link DGL-4500 Xtreme N Router provides users with increased control to maximise online performance by incorporating D-Link's Xtreme N Duo wireless technology (allowing users to choose the 2.4Ghz or 5Ghz band), a high-performance CPU and a Network Activity Display for instant review of network settings. The DGL-4500 Xtreme N Router includes Gigabit WAN and LAN ports for ultimate performance when used as a wired router.

The included Network Activity Display, a bright organic light-emitting diode (OLED) display on the router for monitoring important network activity, was created around the idea of "You can never have too much information". The Network Activity Display provides time-saving benefits for users wanting to monitor their network performance and keep it running at optimal levels. Among the settings available for viewing, customers can quickly check the DGL-4500 Xtreme N Router's security types, network speeds, wireless network names, and much more. Users can also use the available D-Link Network Monitor Yahoo!® Widget for real-time network information delivered right to the desktop.

The D-Link DGL-4500 Xtreme N Router enables users to set up a high-performance network that offers the fastest wired and wireless speeds available from a single broadband device. The user interface of the Xtreme N Router allows for the configuration of multiple ports or port ranges in the

firewall simply by selecting the application to be prioritised from a menu. With an easy-to-use Web interface, the D-Link DGL-4500 Xtreme N Router can be accessed quickly to change settings and adjust performance for individual applications. The DGL-4500 can prioritise Internet traffic by port, application, MAC address and IP address.

The new router is easily configured through the advanced features section of the product's Web-based interface. The D-Link DGL-4500 Xtreme N Router features robust security to help protect the wireless network from intruders, supporting the latest wireless networking security standards, including Wi-Fi Protected Access (WPA and WPA-2), and advanced firewall features such as Network Address Translation (NAT), Stateful Packet Inspection (SPI), and Virtual Private Network (VPN) Pass-Through/Multi-Sessions.

The DGL-4500 features four gigabit LAN ports, one gigabit WAN port and a USB Port for Windows® Connect Now, along with three external reverse SMA dual band antennas.

Price and Availability
The D-Link DGL-4500 Xtreme N Router is available now with recommended retail prices of AU$429.95 inc. GST and NZ$469.00 inc. GST.
