

D-Link Introduces Compact IP Surveillance Systems Kit For Easy Remote Monitoring From Virtually Anywhere

Keeping an eye on business all the time can now be easily achieved

Sydney, Australia – October 1, 2009 – D-Link, the end-to-end computer networking solutions provider for consumers and businesses, today announced the release of a multi-channel IP video surveillance system that offers simple to use and simple to implement all-in-one security kits targeted at small and medium sized businesses.

The surveillance kits known as D-Link SecureCenter Kits come in two different packages to provide multiple choices of selection to meet different business environments and requirements. The Kits combine advanced features and digital video compression technologies found in advanced multi-component surveillance systems, and put them together into a compact and easy to manage solution. Each D-Link SecureCenter Kit comes complete with two IP-based network cameras, a Network Video Recorder (NVR) and video management software.

“With D-Link SecureCenter Kits, users will be able to view live video streaming on any computer connected directly to the local network or from anywhere in the world via the Internet,” said Maurice Famularo, Marketing Director for D-Link Australia and New Zealand. “Users will be able to view videos from multiple locations simultaneously where the cameras have been installed, and can record digital video 24/7 using schedule or motion detection.”

Some of the key benefits of the SecureCenter Kit include easy installation and set up, painless integration with existing infrastructure, manageability and accessibility anywhere, and effective playback and monitoring.

Keeping an eye on businesses can now be easily achieved with the D-Link SecureCenter Kit. Together with the bundled camera management software that comes with the NVR, users can now watch what is going on at their remote business premise, entrances, warehouses, shipping areas and other places, all within the office or at a remote location, wherever they are at whatever the time.

With D-Link’s NVR advanced playback*, searching through recorded data need no longer be tedious or frustrating. The smart search function in the advanced playback is capable of detecting notable events effortlessly by selecting a target area on the video and setting search sensitivity. Criteria for the search sensitivity can include options such as motion detection, missing or abandoned object, lost of focus or camera occlusion. In addition, the NVR’s playback manager comes with a clean and simple web interface to help users play, search or export video streaming data easily.

SecureCenter Kit

D-Link SecureCenter Kit comes in two different options to offer you more choices of selection to suit your business environment and requirements.

Kit 1 – D-Link DNS-722-4, DCS-3410 x 2 and D-ViewCam NVR

Kit 2 – D-Link DNS-726-4, DCS-3410 x 2 and D-ViewCam NVR

DNS-722-4 Network Video Recorder

A 2-bay Network Video Recorder (SATA HDD) with 4 channel camera support. This basic model provides easy installation, high security, powerful event management, live viewing, playback, and extensive recording functionality, including schedule recording. This model supports all D-Link cameras.

DNS-726-4 Network Video Recorder

A 2-bay Network Video Recorder (SATA HDD) with 4 channel camera support. This professional model provides easy installation, high security, live viewing, extensive recording functionality which includes event and schedule recording, and advanced playback with smart search. This model also supports third party cameras.

DCS-3410 IP Surveillance Camera

A Power over Ethernet (PoE) network camera designed for both day and night (with external IR illuminator), suitable for indoor applications as well as outdoor applications if outdoor enclosure is added.

D-ViewCam NVR Software

Software bundled with the NVR consisting of three main components: Multi-NVR Viewer, Playback Manager, Backup and File Manager. Multi-NVR Viewer supports simultaneous display of up to 16 channels with drag and drop features to easily organise video views onto display window. Playback Manager includes a clean and simple web GUI interface that allows you to play, search or export video. Backup and File Manager provides flexible backup utility for simple processing of backing up of video data from the NVR to external storage.

* D-Link's NVR advanced playback for smart search function is currently only available with the DNS-726 series
