

**D-LINK UNVEILS FIRST GIGABIT GAMING ROUTER™: LAG IS NO LONGER AN
EXCUSE™**

**New D-Link Gaming Router Features GameFuel™ Priority Technologies to Minimize In-
Game Lag for the Ultimate Online Gaming Experience**

Sydney, Australia, September 28, 2005 — D-Link, the global leader in design, development and manufacturing of networking, broadband, wireless and communications technologies for the SOHO, SMB and enterprise markets, today announced the industry's first wireless Gaming Router, GamerLounge enabling, online games to be given precedence for bandwidth over all other Internet applications, email and FTP transfers.

"Designed with gamers in mind, the GamerLounge router surpasses the high-performance demands of today's video games with the fusion of D-Link GameFuel technologies, Gigabit LAN ports and up to 108Mbps WLAN connectivity," said Maurice Famularo, Marketing Director of D-Link Australia and New Zealand. "When playing an online game where every millisecond counts, gamers need the fastest router available to give them a competitive edge."

GamerLounge features D-Link GameFuel priority technologies, a new intelligent packet processing engine integrated directly on the router which enables superior multitasking to each device on the network to perform heavy data transfers without compromising the gaming traffic. Optimized for PC, Xbox™ and PlayStation®2 games, the D-Link GamerLounge wireless router provides gamers with increased control to maximize online performance for the ultimate "no lag" gaming experience.

The D-Link GamerLounge wireless router enables users to set up a high-performance gaming network that offers the fastest wired and wireless speeds available from a single broadband device. The game-centric user interface of the Gaming Router allows for the configuration of multiple ports

or port ranges simply by selecting the game title from a menu. With an easy to use, Flash-based Web interface, the D-Link GamerLounge wireless router can be accessed quickly to change settings and adjust performance for individual applications.

The D-Link GamerLounge wireless router is also the first router to brandish four 1000Mbps Gigabit Ethernet ports with up to 108Mbps 802.11g wireless connectivity for blazing fast LAN party and WLAN connections.

Delivering sophisticated firewall protection, the D-Link GamerLounge wireless router is easily configured through the advanced features section of the product's web-based interface. The router features a high performance CPU to support advanced management features such as MAC address authentication, Stateful Packet Inspection (SPI) and Content Filtering. The D-Link GamerLounge wireless router features robust security to protect the wireless network from intruders, supporting the latest wireless networking security standards, including WEP encryption and Wi-Fi Protected Access (WPA) support for both 802.1x and WPA-PSK.

Pricing
