INTERNET CONNECTION SETTINGS

In this section, you can setup the IP camera's wired network interface settings. If you are configuring this device for the first time, D-Link recommends that you click the Setup Wizard button, and follow the instructions on screen. If you wish to modify or configure the IP camera settings manually, click manual setup to enable the IP camera connection setup.

Internet Connection Setup Wizard Manual Internet Connection Setup

IP CAMERA MOTION DETECTION SETTINGS

In this section, you can setup the IP camera's Motion Detection settings. If you are configuring this device for the first time, D-Link recommends that you click the Setup Wizard button, and follow the instructions on screen. If you wish to modify or configure the Motion Detection settings manually, click manual setup to enable the Motion Detection setup.

Motion Detection Setup Wizard Manual Motion Detection Setup

Helpful Hints..

If you are an advanced user and have configured an Internet camera before, click 'Manual Internet Connection Setup' to input all settings manually.

If you consider yourself an advanced user and you want to manually set up motion detection settings, click 'Manual Motion Detection Setup' to input all the settings manually.

User Name: _____
 Password: _____
 Confirm password: _____
 PPPoE Status: PPPoE is inactive.

HTTP

HTTP port: 80
 Access name for stream1: video1.mjpg
 Access name for stream2: video2.mjpg

HTTPS

HTTPS port: 443

RTSP

Authentication: Disable
 RTSP port: 554
 Access name for stream1: live1.sdp
 Access name for stream2: live2.sdp

Helpful Hints..

Select 'DHCP Connection' if you are running a DHCP server on your network and would like an IP address assigned to your IP camera automatically.

UPnP: Enabling UPnP settings will allow you to configure your IP camera as an UPnP device in the network.

PPPoE Setting: If you use the IP camera to connect directly to the Internet, you will need to enter the username and password, which were given to you when you set up your account with your Internet Service Provider. If the camera is behind a router or a gateway, you do not need to configure this setting.

HTTP: HTTP Port is the port you allocate in order to connect to the IP camera via a standard web browser.

HTTPS: HTTPS Port is a port you allocate in order to connect to a IP camera by using streaming mobile device(s), such as a mobile phone or PDA.

CoS (Class of Service): Coarsely-grained traffic control based on the L2 protocol. Class of Service technologies do not guarantee a level of service in terms of bandwidth and delivery time, they offer a "best-effort".

QoS (Quality of Service): Finely-grained traffic control, a resource reservation control mechanism. Quality of service guarantees are important if the network capacity is insufficient.

IPv6

Enable IPv6

Manually setup the IP address

Optional IP address / Prefix length: / 64
 Optional default router:
 Optional primary DNS:

MULTICAST

Enable multicast for stream 1

Multicast group address: 239.1.1.1
 Multicast video port: 6550
 Multicast RTCP video port: 6551
 Multicast audio port: 6552
 Multicast RTCP audio port: 6553
 Multicast TTL [1~255]: 64

Enable multicast for stream 2

Multicast group address: 239.1.1.2

QoS (Quality of Service): Finely-grained traffic control, a resource reservation control mechanism. Quality of service guarantees are important if the network capacity is insufficient, especially for real-time streaming multimedia applications.

Enable IPv6: Select this option and click Save to enable IPv6 setting. Please note that this only works if your network environment and hardware equipment support IPv6. The browser should be Microsoft® Internet Explorer 6.0, Mozilla Firefox 3.0 or above. When IPv6 is enabled, by default, the Network Camera will listen to router advertisements and be assigned a link-local IPv6 address accordingly.

IPv6 Information: Click this button to obtain the IPv6 information. If your IPv6 setting are successful, the IPv6 address list will be listed in the pop-up window. Please follow the steps below to link to an IPv6 address:
 1) Open your web browser.
 2) Enter the link-global or link-local IPv6 address in the address bar of your web browser.
 3) Press Enter on the keyboard or click Refresh button to refresh the webpage.

Manually setup the IP address: Select this option to manually configure IPv6 setting if your network environment does not have DHCPv6 server and advertisements-enabled routers.

Multicast: Click the items to display the detailed configuration information. Select the Always multicast option

DYNAMIC DNS

The Dynamic DNS feature allows you to use a domain name that you have purchased (www.yourdomain.com) to access your IP camera with a dynamically assigned IP address. Most broadband Internet service providers assign dynamic (changing) IP addresses. By using a DDNS service, you can enter your domain name to connect to your IP camera no matter what your IP address is.

[Sign up for D-Link's Free DDNS service at www.DLinkDDNS.com.](http://www.DLinkDDNS.com)

Save Settings Don't Save Settings

Helpful Hints..

Dynamic DNS is useful if you have a DSL or Cable service provider that changes your modem IP address periodically. This will allow you to assign a website domain name to your IP camera instead of connecting through an IP address.

Mirror On Off
 Flip On Off
 Power Line 60 Hz 50 Hz
 White Balance
 Exposure Mode Max Gain dB
 Enable automatic Iris adjustment
 Denoise
 Brightness
 Contrast
 Saturation
 Sharpness
 WDR Level

Helpful Hints..

Privacy Mask: Click the attached box to activate this function. Now use your mouse to draw a rectangle covering the area you want hidden. Click the box again to deactivate the function.

Mirror: This function horizontally reverses your images 180 degrees.

Flip: This function vertically reverses your images 180 degrees.

Power Line: This setting is used to remove 50/60 Hz flicker.

White Balance: White Balance - Is the process of removing unrealistic color casts, so that objects which appear white in person are rendered white in your photo.

Exposure Mode: Exposure is the total amount of light allowed to fall on the image sensor during the process of capturing an image. You may choose different scene modes to produce the better images.

Max Gain: It can always be enabled automatically. But you have an option- you can change Max Gain either automatically or manually.

Iris Adjustment: To achieve special inventive effects or to deal with special lighting situations. The iris also can be adjusted manually.

Iris Speed: To adjust exposure and focus.

AUDIO AND VIDEO

This section allows you to configure the sound and video of your camera. You can configure different settings depending on whether you are viewing content from a PC or a Mobile Phone / PDA.

Save Settings Don't Save Settings

VIDEO SETTINGS

Number of active profiles: 2
 Aspect ratio: 2 **Warning: Change the aspect ratio will clear the settings of privacy mask and preset and motion detection.**

Save Default

VIDEO PROFILE 1

Mode: H.264
 Frame size: 1920x1080
 View window area: 1920x1080
 Maximum frame rate: 25
 Video quality:
 Constant bit rate: 2M
 Fixed quality: Excellent

VIDEO PROFILE 2

Mode: JPEG
 Frame size: 640x360
 View window area: 640x360
 Maximum frame rate: 25
 Video quality: Excellent

AUDIO SETTINGS

Encoding: 6.711
 Audio in off
 Audio in gain level: 20dB
 Audio out off

Helpful Hints..

Higher frame size, frame rate and bit rate gives better video quality. At the same time, it requires more network bandwidth.

For best viewing results on a mobile phone, we suggest setting the Frame Rate to 5fps and the Bit Rate to 64 kbps.

Number of active profiles: Number of profiles that you wish to activate. The maximum profiles are three.

Aspect Ratio: An aspect ratio is the ratio between the width and height of an image.

Mode: It can be H.264, JPEG, or MPEG4. In JPEG mode, the video frames are independent; MPEG4 consumes much less network bandwidth than JPEG, and H.264 can use less bandwidth but better image quality.

Frame Size: 7 options exist for the sizes of the video display. It is recommended using 176x144 for mobile viewing and 1920x1080 for computer viewing.

View window area: The viewing region of the current video stream.

Max frame rate: The maximum number of frames that is displayed in 1 second. 30fps is the highest video quality for this camera. In general, any frame rate above 15 fps is imperceptible to the human eye.

Video Quality: This limits the maximum frame

LENS CONTROL

There is a red rectangular frame as an insert which can be moved in the live image of this setting page. You can fine tune the lens focus of the red frame by selecting the automatic option or just modify it manually.

LENS CONTROL

12/11/2012 12:53:16 PM
 192.168.0.20

Focus Mode :

Lens Zoom Speed :

Zoom :

Focus :

Helpful Hints..

Zoom: Use the zoom function to control the camera image to zoom out or zoom in.

Focus: Use the focus function to control the camera image to focus far or focus near.

Auto mode: The screen is split into 9 rectangular areas marked in red frames. Left click the mouse on the areas you wish to focus on. In a few seconds, your choice will be activated. The scroll bar under the screen has the 'Zoom in' icon on the left side, and the 'Zoom out' icon on the right. Click on the bar to get the 'Zoom in' function on the left, and 'Zoom out' on the right.

Manual Mode: Here we don't have the red rectangles, but we have 2 options: 'Zoom' and 'Focus', with Zoom's icons being 'Zoom in' and 'Zoom out', and Focus's icons being 'Near' and 'Far'.

Lens Zoom Speed: It controls the speed of each step of Pan, Tilt and Zoom.

MOTION DECTION

In order to use motion detection, you must first check the checkboxes, then draw the areas you want to monitor for motion.

LIVE VIDEO

Enable Video Motion
01/14/2012 19:28:28
DCS-7513

Sensitivity
85 0~100%

Percentage
5 0~100%

Helpful Hints..

Enable Video Motion: Select this option to enable motion detection for your camera.

Sensitivity: Sets the sensitivity for motion detection. The text field indicate the level of sensitivity for motion detection. As motion is detected the level will rise depending on the frequency of the movement.

Percentage: Adjusting the percentage allows you to set a requirement on how much of the motion window must be filled by movement. Example: If you set this to 50%, then the selected window must be half filled by a moving object before it triggers motion detection.

TIME CONFIGURATION

Time Zone: (UTC+10:00) Canberra, Melbourne, Sydney

Enable Daylight Saving

Auto Daylight Saving

Set date and time manually

Offset:

	Month	Week	Day of week	Hour	Minutes
Start time	<input type="text" value="5"/>	<input type="text" value="1"/>	<input type="text" value="Sunday"/>	<input type="text" value="00"/>	<input type="text" value="00"/>
End time	<input type="text" value="10"/>	<input type="text" value="1"/>	<input type="text" value="Sunday"/>	<input type="text" value="00"/>	<input type="text" value="00"/>

AUTOMATIC TIME CONFIGURATION

Synchronize with NTP Server

NTP Server: <<

Select NTP Server

ntp1.dlink.com

ntp.dlink.com.tw

SET DATE AND TIME MANUALLY

Set date and time manually

Year	<input type="text" value="2012"/>	Month	<input type="text" value="1"/>	Day	<input type="text" value="1"/>
Hour	<input type="text" value="2"/>	Minute	<input type="text" value="37"/>	Second	<input type="text" value="34"/>

Helpful Hints..

Good timekeeping is important for accurate logs and scheduled firewall rules.

Time Zone: Select your time zone from the drop-down menu.

Enable Daylight Saving: Select this to enable the daylight saving time.

Auto Daylight Saving: When you select it, the clock is automatically adjusted according to the daylight saving time of the selected time zone.

Offset: Select the time offset, if your location observes daylight saving time.

Synchronize with NTP Server: With the option selected, the camera will synchronize the time settings with the NTP server over the Internet whenever the camera starts up. If the timeserver cannot be reached, no time settings will be applied.

NTP Server: Network Time Protocol (NTP) synchronizes the IP camera with an Internet time server. Choose the one that is closest to your location.

Copy Your Computer's Time Settings: This will synchronize the time information from your PC.

Server address: _____
Port: 21
User name: _____
Password: _____
Remote folder name: _____

Passive mode

Network storage

Network storage location: _____
(for example: \\my_nas\disk\folder)
Workgroup: _____
User name: _____
Password: _____
Primary WINS server: _____

SD Card

Helpful Hints..

"Server name" The unique name for server. There are four kinds of servers supported. They are email server, FTP server, HTTP server and network storage.

Email server:
"Sender email address" The email address of the sender.
"Recipient email address" The email address of the recipient.

FTP server:
"Remote folder name" Granted folder on the external FTP server. The string must conform to that of the external FTP server. Some FTP servers cannot accept preceding slash symbol before the path without virtual path mapping. Refer to the instructions for the external FTP server for details. The folder privilege must be open for upload.
"Passive Mode" Check it to enable passive mode in transmission.

Network storage: Only one network storage is supported.
"Network storage location" The path to upload the media.
"Workgroup" The workgroup for network storage.

SD card: Use the SD card for recording media.

MEDIA

You can set at most 5 different media here for different event.

MEDIA TYPE

Media name:

Snapshot

Source:

Send pre-event image(s) [0~4]

Send post-event image(s) [0~7]

File Name Prefix:

Add date and time suffix to file name

Video Clip

Source:

Pre-event recording: Second(s) [0~4]

Maximum duration: Second(s) [1~100]

Maximum file size: Kbytes [100~5000]

File Name Prefix:

System log

Helpful Hints..

"Media name" The unique name for media. There are three kinds of media. They are snapshot, video clip and system log.

Snapshot:
"Source" The source of profile, profile1 or profile2.
"Send Pre-event images" The number of pre-event images.
"Send Post-event images" The number of post-event images.
"File name prefix" The prefix name will be added on the file name of the snapshot images.
"Add date and time suffix to file name" Check it to add timing information as file name suffix.

Video clip:
"Source" The source of profile, profile1 or profile2.
"Pre-event recording" The interval of pre-event recording in seconds. There are two limitations for video clip file.
"Maximum duration" The maximal recording file duration in seconds.
"Maximum file size" The maximal file size would be generated.

Priority: The event with higher priority will be executed first.

Delay second(s) before detecting next event: The delay to check next event. It is used in motion detection and digital input trigger type.

There are five kinds of trigger supported.

There are five kinds of trigger supported.

Video motion detection: Select the windows which need to be monitored.

Periodic: The event is triggered in specified intervals. The unit of trigger interval is minute.

Digital input: The event is triggered when the DI status changed by external device.

System boot: The event is triggered when the system boot up.

Network lost: The event is Triggered when the network service is not available or disconnection.

Sun ~ Sat: Select the days of the week to perform the event.

Time: show "Always" or input the time interval.

The default action are triggering DO and storing media on SD card. If there are servers configured, the user can select them from "Server name", too.

Trigger DO: Check it to trigger digital output for specific seconds when event is triggered.

Note: Please Format SD card before use. The entire data in the SD card will be erased after

SD CARD

Here you could browse and manage the record files which stored in SD card.

SD CARD

The SD Card Storage is unavailable or not formatted.

Helpful Hints..

Format SD Card:
Click this icon, system will automatically format SD card and create "picture" & "video" folders.

View recorded picture:
If SD stored recorded picture files, enter picture link and choose which picture file you desire to view. You will view picture via image viewer SW. (ie. Windows Image Viewer)

Playback recorded video:
If SD stored recorded video files, enter video link and choose which video file you desire to playback. Windows will guide you to open/download video file (AVI format) so that you can playback file via video decoder SW (ie. Windows Media Player)

DI AND DO

The I/O connector provides the physical interface for digital output (DO) and digital input (DI) that is used for connecting a diversity of external alarm devices such as IR-Sensors and alarm relays.

The digital input is used for connecting external alarm devices and once triggered images will be taken and e-mailed.

Save Settings Don't Save Settings

DI AND DO

Digital Input 1: The active state is N.O. ; the current state detected is **Normal Open**

Digital Output: The active state is N.O.

VIDEO OUTPUT

VIDEO OUTPUT On Off

Save Settings Don't Save Settings

Helpful Hints..

The network ipcam str provides a general I/O terminal block with one digital input and one relay switch for device control. Pin DI+ and pin DI- can be connected to an external sensor and the state of voltage will be monitored from the initial state LOW. The relay switch of pin DO+ and pin DO- can be used to turn on or off the external device. Please refer to manual for detail connection diagram.

TV Output: This function has two options: ON and OFF. To enable this option, plug the cable connection into the TV output adapter. Connect the other end of the cable to your monitor. Image from your cameras will be captured by a sensor and transmitted to your monitor. CM.

ICR AND IR

An IR(Infrared) Cut-Removable(ICR) filter can be disengaged from the image path for increased sensitivity in low light environments. The ICR filter will automatically engage depending on the ambient light, allowing the camera to be effective in day/night environments.
 1. Select the Day/Night from the radio button. The available options are Automatic, Schedule mode, Day mode and Night mode.
 2. The default value is Automatic.

Light Sensor Sensitivity
 Light sensor sensitivity has Low, Medium, and High three different levels. You may get current camera light illumination by clicking Refresh button to set proper level of Light sensor sensitivity. For example, when level sets at High less than 30lux, camera will switch Day & Night mode to Night mode.

IR Light
 The built-in IR light illuminators will be activated automatically or manually so as to supplement the low light situation without additional equipment.

Save Settings Don't Save Settings

Helpful Hints..

ICR and IR:

Automatic: The day/Night mode is set automatically. It is normally set in the Day mode and changes to the Night mode in a dark place.

Day mode: The Day mode means disable the IR Cut Filter.

Night mode: The Night mode means enable the IR Cut Filter.

Schedule mode: Set the Day/Night mode using the schedule. Fill in the time so the Day/Night mode is normally set to Day mode and it enters the Day mode at the start time and returns to the Night mode at the end time.

IR Light Control:
 In poor light conditions, open IR Light Control to automatically turn on the light to enable you to take clear picture. The IR Light Control has 4 options: Off, On, Sync. with ICR, and Schedule. Off: This option disable the IR Light Control. On: This option automatically opens the IR Light Control to enable a camera to take clear images in poor light conditions. Sync. with ICR: In this option, the IR Light Control will open automatically and follow the ICR setting. Schedule: In this option, you have to customize the setting to set the time period you want. Please set the Start time and the End time of your
