CMS (Center Management System) User Manual

Issue: 1.4 Date: 2020/02/26

Introduction

Overview

This document describes in detail the configuration and use of the video management of CMS.

Reader

This document is intended for:

- Technical Support Engineer
- System Manager
- System Operator

Symbol Convention

The following symbols may appear in this document, and their meanings are as follows:

Symbol	Description
	Alert you to a high risk hazard that could, if not avoided, result in death or serious injury.
	Alert you to a medium or low risk hazard that could, if not avoided, result in moderate or minor injury.
	Alert you to a potentially hazardous situation which, if not avoided, result in equipment damage, data loss, performance deterioration, or unanticipated results.
G =− [™] TIP	Provide a tip that may help in solving a problem or saving time.
	Provide additional information to emphasize or supplement important points in the main text.

1 Platform Description

The platform can be used for video management of different monitoring scales. It supports centralized management, distributed deployment, multi-user remote access. With user management, device management, server management, alarm management, map management, device configuration, real-time video, video playback, personnel archive management, data statistics, face recognition and other functions. Meets a variety of video surveillance solutions.

1.1 System Function

- Multiple front-end devices can be connected. Support IPC, NVR, face capture camera, panda camera.
- Centralized management and distributed deployment. Unified management of resources such as users and devices, and distributed deployment of servers.
- > Authority management. Different users can be assigned different functional rights.
- > Device management. Support automatic search, manual addition, batch import of devices.
- User rating management. Support the combination of administrative organization structure to achieve user hierarchical management. The superior can manage the subordinates.
- Organizational management. Users of a specific organization can be restricted to only view the content of their organization's camera.
- Real-time monitoring. Support multi-screen layout preview, round tour preview.
- Video playback. Support multi-picture video synchronous playback.
- Video download. Support downloading NVR and DVR recordings to local clients.
- Map management. Support for electronic map-based video preview.
- Real-time alarm. Support alarm display of front-end devices.
- > Data statistics. It can count the alarm data of the platform equipment and online rate of the equipment.
- Personnel information management. The fundamental library for face recognition supports multi-level management and batch import.
- Face recognition comparison. The face of the face capture machine is displayed in real-time and determined by comparing with the fundamental library.
- Search by image. Support fuzzy search for faces and support for finding similar faces through faces of library.
- Attendance management. Support face library for attendance.
- AI recognition. Statistics of vehicle, human, etc.
- > Health archives. Manage the health information of personnel, and show the chosen person's temperature.
- Vehicle identify. Real-time view of the vehicle license plate snapshot pictures, relevant warehousing information.
- Attendance management. The face detection cameras can be used to manage employee attendance and face recognition punching.
- Body temperature monitoring. Support human body thermometer to monitor body temperature in the face database to form a health archive.
- Thermal temperature management. Support for thermal imaging capture, snap search and historical retrieval.
- Monitoring center. Comprehensive monitoring center, visual comprehensive management interface, which mainly displays the current main data of the platform, conventional monitoring, AI intelligence, etc.

1.2 System Components

1.2.1 Central Management Server

The central management server centralizes user management, authority management, device management, server management, alarm management, electronic map management, face database management, etc.; Running as a server, can be installed on a separate physical server or installed with other components. Users must first connect to the central management server for permission authentication, and then connect to the media distribution server, intelligent analytics server to use the relevant features.

1.2.2 Database Server

The central management server and intelligent analysis server use the MySQL database storage system configuration; and run as a server, and are installed with the central management server.

1.2.3 Media Distribution Server

The media distribution server forwards the audio and video streams of the device to the requesting user, ensuring high performance with end-to-end low latency; support running as a service, can be installed on a separate physical server or installed with other components.

When the media distribution server is installed separately on a server, the IP address of its central management server must be configured so that it can be managed by the central management server. The performance indicators of the media distribution server are as follows: NIC is Gigabit

	•				
Channel	Camera Bitrate	Input Bitrate	Output Bitrate		
200	4 Mbps	800 Mbps	800 Mbps		
400	2 Mbps	800 Mbps	800 Mbps		
500	1.5 Mbps	800 Mbps	800 Mbps		

1.2.4 Intelligent Analysis Server

The intelligent analysis server is used for face recognition applications; it only supports cameras with face detection; it runs as a service and can be installed on a separate physical server or installed with other components. For high performance requirements, it is recommended that the intelligent analysis server be installed separately on a physical server.

The V1.2 version of the intelligent analytics server only supports CPU.

Reference:

Туре	Model	ROM	Channel of face detection
CPU	Intel(R) Core i5-7500	8 G	1-3
CPU	Intel(R) Core i7-8700	8 G	2-8

CPU Intel(2630	(R) Xeon(R) cpu E5-) v4	16 G	4-10
--------------------	-----------------------------	------	------

In the same configuration, the fewer the access cameras, the higher quality of real-time video, the denser the flow of people (human faces), the worse quality of real-time video, and can be adjusted according to actual needs. This is only a reference, please refer to actual configure.

1.2.4.1 Server Management Tool

The server management tool is used to manage the platform server components, which exclude the client; displaying the running status of the component, it can also control the startup, stop, and delete the component; you can manually add the service. If the service component does not start normally, it will flash a reminder in the system tray to find the problem in time. The tool will launch as soon as the installation is successful. As shown in figure 1-1.

1.2.5 Client

1.2.5.1 About PC Client

Currently, the client only supports Windows system. It is a kind of software specially designed for video management. Users can remotely access real-time video and video recordings, and manage users, devices, servers, alarms, etc. and meanwhile control devices. The client integrates common users and administrator users to facilitate unified management of resources. The interface is as follows:

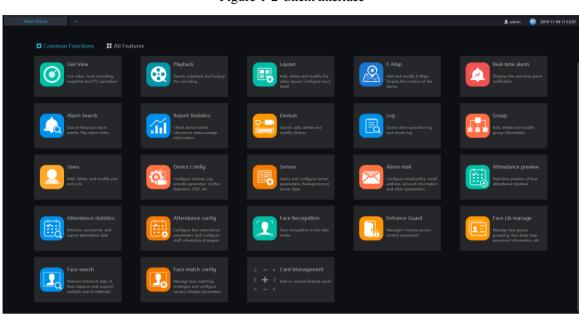

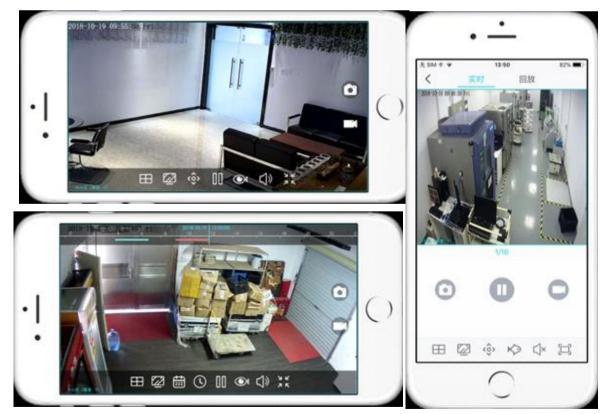

Figure 1-2 Client interface

1.2.5.2 About Mobile Client

The Mobile client provides users with wireless-based video surveillance, which allows users to remotely access real-time video and video recorders, receive device alarms and control devices. The interface is as follows

1.3 System Requirement

OS Not support Microsoft Windows 32 bit anymore.

Name	PC Client	Central Management Server	Distribution		Intelligent Analysis Server (CPU environment)		lligent lysis Server U ironment)

1.4 Deployment Planning

\triangle caution

This content is suitable for administrators to understand the platform before installing, you can choose the appropriate deployment according to different plans.

The platform has good scalability and can support three deployment methods.

- > Mini type: All components of the platform are installed on the same machine.
- > Middle type: The platform client and server are installed on different machines.
- > Large: All components of the platform are installed on different machines.

1.4.1 Mini Method (Standalone Deployment)

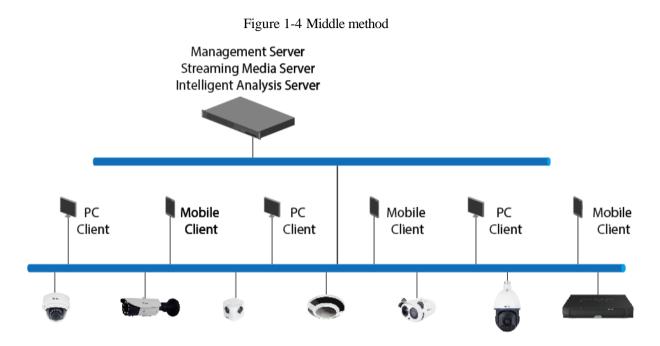

All components of the platform, including server components and client components, are deployed on the same physical machine for easy deployment of small-scale monitoring applications.

Figure 1-3 Mini method

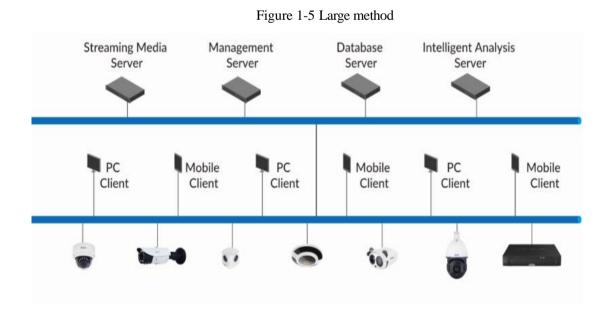

1.4.2 Middle Method (Distributed Deployment)

You can install all the server components on one physical machine and the client installs multiple machines.

1.4.3 Large Method (Distributed Deployment)

If the system is large or you can install each server component on a different machine and the client installs multiple machines

2 Installation

2.1 One-Click Installation

One-click installation is a simplified installation of the Mini type, and the installation process does not require any configuration. The platform is quickly installed on a single machine and is installed by default in the system disk C:\Program Files (x86)\CMS directory. After installation, the server component and client program are automatically started.

Figure 2-1 One click installation

2.2 Custom Installation

Custom installation supports flexible installation. You can choose three installation methods, which correspond to the three deployment modes of the platform. The way is as follows:

Mini method: All components of the platform can be installed on a single machine; it is similar to "one click installation".

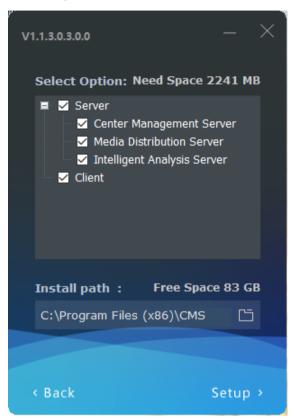

Figure 2-2 Installtion interface

> Middle method: The Sever and Clients installed on differnet machines, build up a distributed deployment

Figure 2-3 Server installed on a machine

Large Method: All components of the platform are installed on different machines to form a larger system

Client installed on another machine

Figure 2-4

After the server is installed, you need to use the server management tool to configure the IP of the central management server of the media distribution server and the intelligent analysis server, which is convenient for unified management by the central management server. The tool is automatically displayed in the system tray after the system is installed. After displaying the main interface, select the corresponding service and click "Configure", as shown in figure 2-5.

🛄 ΝΟΤΕ

0

If the installation is failed, it is recommended to close the firewall or antivirus software.

The server management tool runs automatically after the server is installed. The system tray icon is

click and open the menu.

2.3 Retrieve password

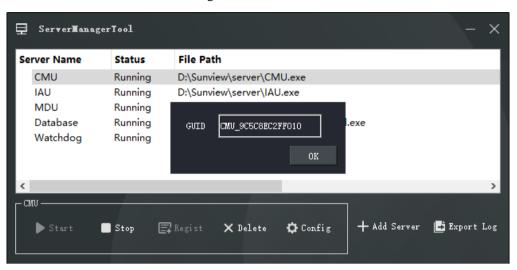

Figure 2-6 GUID

If the user forget the password, please provide the GUID for us, we feedback a new password lasting for one day. User can use it to modify a new password.

3 Login

Server installation is complete, double click on the desktop icon O, input the user, password, and central management server IP, click "Login", the login interface is shown in figure 3-1

The default user name and password are both admin. You should modify after first login to make sure safety of system.

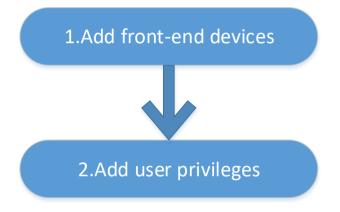

Figure 3-1 Login interface

4 Quick Start

After both the client and the server are successfully installed and running normally, the administrator can login to the system through the client to quickly use the platform as follows. The platform includes basic monitoring applications and smart applications. The smart application is suitable for face recognition and supports our camera with face detection function, including face capture camera and human body thermometer.

4.1 Monitoring Application Configuration Process

4.1.1 Add Front-end Device

Enter the main interface, open "device management, for the introduction of the function menu, you need to cut out the icon, now just a name and then directly interface, it seems more monotonous", if the device and the platform are in the same network segment, you can quickly add by automatic search Equipment, as shown in Figure 4-1:

Figure 4-1 Add device

After selecting the device, click "Add" and the camera can assign the specified server. Figure as below:

4.1.2 Add User Permissions

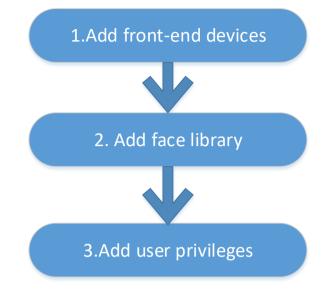

The system has administrator and operator roles by default. You can create users based on the default roles directly. You can assign menu permissions and channel permissions to users. As shown in Figure 4-2:

The monitoring application does not have to assign personnel file permissions, which is used for smart (face recognition) applications.

Step 1 Input the device name, select the device type, input the IP address/user name/password, and select group

Step 2 Click "test" to check your settings, click "Save and New"

Step 3 Pop-up window show "Add successfully", device is displayed in the device management page (device details are displaying on the page at the same time).

cancel, click "OK" to

Step 4 Delete the cameras: tick the No of cameras, click "Delete" to show delete the cameras.

6.4 Export and Import Device

Procedure:

Step 1 Click "Export".

Step 2 Click "Export Template", edit information at template page.

Step 3 Click "Import".

Step 4 Select files to be imported , click "Save" , import device successfully.

--End

6.5 Device Status

Procedure:

Step 1 Click "Device Status".

Step 2 The pop-up window show the status of devices as shown in Figure 6-5.

16 Report Statistics

At the interface of report statistics, the user can view the alarm statistics of group, devices, the online rate of devices is also reported.

On the main menu page, click

Aport Statistics Acch device online alm server

to enter the detailed page, as shown in the figure 16-1.

Figure 16-1 Report statistics interface

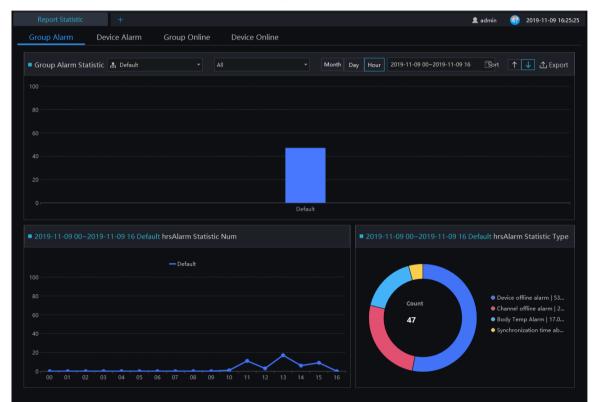

Figure 16-1 Alarm type statistics

There are three forms of visual display of data statistics, histograms, line charts and torus charts.

17 Monitoring Center

In the monitoring center, a visual comprehensive management platform. It can directly call the electronic map to view the online status of regional statistical equipment, such as regional statistics, snapshot statistics, 7 day statistics, 24-hour traffic statistics, attendance, face snapping, real time alarm, E-map, and alarming live video.

On the main menu page, click

to enter the detailed page, as shown in Figure 17-1.

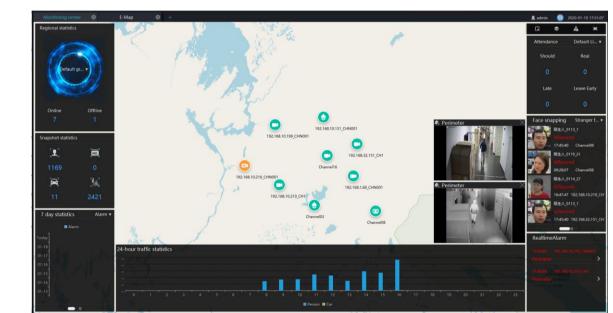

Figure 17-1 Monitoring Center

Regional statistics: Count the number of online and offline devices in different groups.

Snapshot statistics: devices under the organization, statistics faces, number of license plates, vehicles, number of person and vehicles snapshot.

7 days statistics: Pedestrian and vehicle traffic and alarm conditions within the 7 days. This statistic is updated regularly every day. It cannot be updated in real time. Automatically switch between pedestrian and alarm's statistics by default.

24-hour traffic statistics: statistics about the number of people and cars in a 24-hour period.

Attendance: statistics of attendance at the attendance points under the structure of the group.

Face snapping: Count the frequency of strangers and over-temperature capture. By default, two kinds of statistical data are automatically switched and the data is updated in real time.

Real-time alarm: Display real-time alarm information. If the device is connected to the map, you can click to view the real-time video.

Real-time video: Switch the real-time alarm video of the electronic map device in real time.

Click the camera in the E-map can view the live video or playback.

18 Device Configuration

At the interface of device configuration, you can view and set the parameter of the front-end device, such as bit rate parameters, motion detection parameters, OSD parameters, image parameters, thermal parameters, etc. For more devices configuration, click on "Link Web" to enter the device.

The configuration function is related to the firmware version of the device. Please refer to the actual situation.

to enter the detailed page, as shown in Figure 18-1.

19.1 Central Management Server

Data backup and recovery normally is used for system migration, which requires data backup first and recovery then. The backup data contains data from database, like users, device, server, alarm, log, face photos, etc.

Data backup means it will download data from the server where the VMS installed. Data recovery means it will upload the backup data to the servers, it includes perform recovery operations and ensure the system resume normal work.

Server setting, user can set the general parameters of snapshot face capture threshold, the parameters can be used to all cameras with these functions, as shown in Figure 19-2.

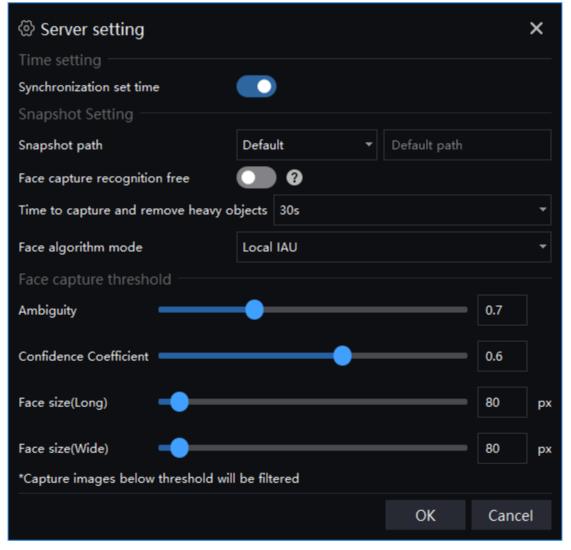

Figure 19-2 Server Setting

- Step 1 Enable synchronization to set the time to facilitate unified management of the device and reduce inconvenience caused by inconsistent time.
- Step 2 Set the snapshot of the duplication time of removing the similarity capture. In the drop-down list, 5S, 10S, 15S, 30S.
- Step 3 Snapshot saving path. It is best not to change the default path. Only change it if you have special needs.

Step 4 The face algorithm mode can choose local IAU and face algorithm box.

Step 5 Face capture threshold, ambiguity, confidence coefficient, face size length and width.

Step 6 Click "OK" to save the settings.

Enable the face capture recognition free, the face recognition device will not recognize and compare faces, and all captured faces are automatically recognized as strangers, reducing performance consumption.

19.2 Data Backup

Procedure:

Step 1 Click "backup" button at right upper of screen, then the pop-up window appears, as shown in Figure 19-1;

📚 Data Backup	×

Figure 21-2 Voice announcement setting

Procedure:

- Step 1 Select the full screen display mode, there are two modes, cards (need to set the card size) and list card.
- Step 2 Enable the stranger, If not the stranger snapshot image is not show on comparison area.
- Step 3 Strangers can set the content of the voice broadcast, the characters are within 10 characters.
- Step 4 The staff already in the library tick the face library, it can set whether to speech the name, time of snapshot, and play text.

Step 5 Set the voice time.

Step 6 Click "+" that appears on the picture to add it directly to the face database.

22 Face Library Manage

At the interface of face library management, a multilevel face library directory can be created. Different face libraries can be added and edit personnel information for face recognition. When the camera detects a face, it can be compared with the library to identify, who was captured.

On the main menu page, click

to enter the configuration page, as shown in figure 19-1

This function is only subject to face detection cameras and license plate detection cameras.

Figure 23-2 Add strategy

Step 3 Check camera and face library.

Step 4 Set up Similarity and activate Stranger mode.

Step 5 Click to confirm the success of adding face comparison, relative devices showing in the list and executable for both Edit and Delete.

24 Face Search

At the Smart Search function page, you can select a face image to retrieve a face photo that matches the face similarity from the platform and play back the track on the map.

This function only supports cameras with face recognition.

On the main menu page, click

Smart Search Through picture to search history event and video

to view more detailed interface.

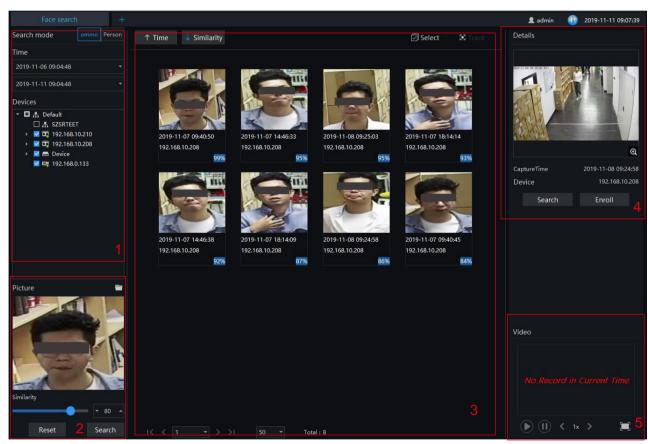

Figure 24-1 Face search

Table 24-1 Smart search

No.	Function	Description
1	Set search mode	The search modes are common and person.
		Set the start time of the query. Select the capture camera, tick the group to select all.

No.	Function	Description
2	Set picture	Select picture from the local folder. Set the similarity. Reset: reset the search items. Search: click "Search" and switch the details picture to search
3	Display information	The information can be displayed by time, similarity in row, behavior track.
4	Details	Click on the image of the query result to display the panorama in the captured state. The captured picture can be entered into the face database. Search directly with snap shots. Enroll: click to enroll the searched picture.
		Enter the face database and search for images. The pictures captured by the camera are generally stored in the snap folder by default.
5	Switch picture to search	If there is a record, you can directly play the video before and after the snapshot.

24.1 Image Searching

Procedure:

Step 1 Click **to** select image.

Step 2 Set Similarity; set time of searching picture and the capture devices.

Step 3 Click "Search", the searching results will display by Time and Similarity.

Step 4 Click the images in the result, displaying the details.

Step 5 Click "Enroll" and show the pop up "Person Enroll" interface. Input relative information and save.

Step 6 Click "Select" to choose picture of searching result.

24.2 Track

User need to set more than two the face detection cameras at the custom e-map at first.

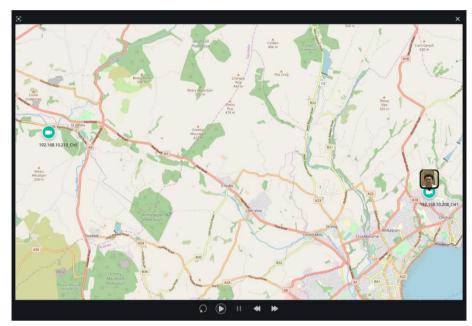

Procedure:

Step 1 Click "select" to start select pictures.

Step 2 Tick the pictures from different cameras.

Step 3 Click "track", the pop-up track map will show, as shown in .

Figure 24-2 Track

Step 4 Replay or playback the track line.

25 Classification Data Query

At the Face Match configuration page, you can add a comparison strategy between the camera and the face library for different cameras to be compared with different face databases. When the camera detects a face, it only compares with the chosen library.

On the main menu page, click

This function is only subject to Face Detection cameras.

to view the configuration interface, as shown in Figure 25-1.

Figure 25-1 Classification data query

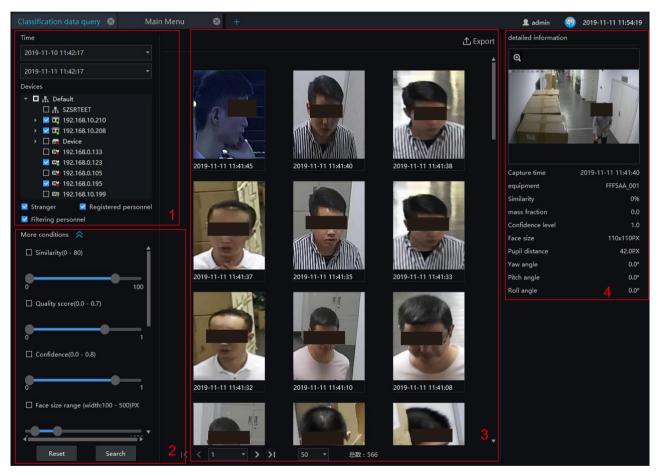

Table 25-1 Smart search

No.	Function	Description
1	Basic conditions of querying	Start time and end time, tick the devices and modes of face libraries.

No.	Function	Description
2	More conditions	Set similarity, quality score, confidence, face size range, pupil distance range, yaw angle, pitch angle, roll angle.
3	Operation of library	The basic operation of license plate library.
4	Detailed information	The result of querying, show the detail information.

Procedure:

Step 1 Set the query start time and select the device.

Step 2 Tick the devices of the query. The default is to select all.

Step 3 Set the classification query conditions and search accurately.

Step 4 Click "Query" and the result of the query is now displayed.

Step 5 Click "Reset" to reset the query criteria.

Figure 25-2 More conditions

Similarity(0 - 80)	☐ Face size range (width:100 - 500)PX	
0 100	0 1920	☐ Yaw angle(0 - 90)°
