## 1. Introduction

## Audience

This reference manual is intended for network administrators and other IT networking professionals responsible for managing the switch by using the Web User Interface (Web UI). The Web UI is the secondary management interface to the DGS-1510 Series switch, which will be generally be referred to simply as the 'Switch' within this manual. This manual is written in a way that assumes that you already have the experience and knowledge of Ethernet and modern networking principles for Local Area Networks.

## **Other Documentation**

The documents below are a further source of information in regards to configuring and troubleshooting the switch. All the documents are available either from the CD, bundled with this switch, or from the D-Link website. Other documents related to this switch are:

- DGS-1510 Series Gigabit Ethernet SmartPro Switch Hardware Installation Guide
- DGS-1510 Series Gigabit Ethernet SmartPro Switch CLI Reference Guide

## Conventions

Convention	Description
Boldface Font	This indicates a button, a toolbar icon, menu, or menu item. For example, Open the <b>File</b> menu and choose <b>Cancel</b> . Used for emphasis. This may also indicate system messages or prompts appearing on screen. For example, <b>You have mail</b> . Bold font is also used to represent filenames, program names, and commands. For example, use the <b>copy</b> command.
Initial capital letter	This indicates a window name. Names of keys on the keyboard have initial capitals. For example, click Enter.
Menu Name > Menu Option	This indicates the menu structure. <b>Device &gt; Port &gt; Port</b> <b>Properties</b> means the <b>Port Properties</b> menu option under the <b>Port</b> menu option that is located under the <b>Device</b> menu.

## **Notes, Notices, and Cautions**

Below are examples of the three types of indicators used in this manual. When administering your switch using the information in this document, you should pay special attention to these indicators. Each example below provides an explanatory remark regarding each type of indicator.

**NOTE:** A note indicates important information that helps you make better use of your device.

**NOTICE:** A notice indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

**CAUTION:** A caution indicates a potential for property damage, personal injury, or death.

## 2. Web-based Switch Configuration

Management Options Connecting using the Web Logging onto the Web Smart Wizard Web User Interface (Web UI)

## **Management Options**

The Switch provides multiple access platforms that can be used to configure, manage and monitor networking features available on the Switch. Currently there are three management platforms available and they are described below.

#### Web User Interface (Web UI)

The Switch can be managed through any of the RJ4/SFP/SFP+ ports on the front panel of the Switch by means of an HTTP/HTTPS connection using a Web browser like Microsoft<sup>®</sup> Internet Explorer, Mozilla Firefox, Safari, or Google Chrome.

#### Command Line Interface (CLI)

The Switch can be managed, Out-Of-Band (OOB), through the RJ45 Console port on the front panel of the Switch. Alternatively, the Switch can also be managed, in-band, through any of the RJ4/SFP/SFP+ ports on the front panel of the Switch by means of a Telnet connection. The command line interface provides complete access to all switch management features.

#### **SNMP-based Management**

The Switch can be managed with an SNMP-compatible console program. The Switch supports SNMPv1, SNMPv2c, and SNMPv3. The SNMP agent decodes the incoming SNMP messages and responds to requests with MIB objects stored in the database. The SNMP agent updates the MIB objects to generate statistics and counters.

## **Connecting using the Web UI**

Most software functions of the DGS-1510 Series switches can be managed, configured, and monitored through the Web UI. Manage the Switch from remote stations anywhere on the network through a standard web browser. The web browser acts as a universal access tool and can communicate directly with the Switch using the HTTP or HTTPS protocol.

**NOTE:** The Command Line Interface (CLI) provides the functionality of managing, configuring, and monitoring **all** of the software features that are available on the Switch.

## Logging onto the Web UI

To access the Web UI, simply open a standard web browser on the management PC, and enter the Switch's default IP address into the address bar of the browser and press the **Enter** key.

11	

NOTE: The default IP address of this switch is **10.90.90.90**, with a subnet mask of **255.0.0.0**.

	and the second second		
$\leftarrow$	<i>ế</i> http://10.90.90.90/	,C - ⊠ → X	<i>i</i> 10.90.90.90 ×

Password	••••		
Language	English		
	Login Reset		

Figure 2-2 User Authentication Window

Enter the **User Name** and **Password** in the corresponding fields and click **Login**. This will open the Web UI. Management features available in the Web UI of the Switch are explained below.

## **Smart Wizard**

After successfully connecting to the Web UI for the first time, the **Smart Wizard** embedded Web utility will be launched. This wizard will guide the user through basic configuration steps that is essential for first time connection to the Switch.

### Step 1 - Web Mode

The Switch supports two Web Modes: **Standard Mode** and **Surveillance Mode**. The Standard Mode is used to configure, manage, and monitor most of the software features on the Switch. The Surveillance Mode is an additional web mode specifically designed to assist the user with surveillance features supported by the Switch.

**NOTE:** The **Web Mode** can only be changed when one user session is connected to the Web UI of the Switch.

Welcome to Smart Wizard				
The wizard will guide you to do basic configurations on 4 steps for the Web Mode, IP Information, User Account and SNMP. If you are not changing the settings, click on "Exit" to go back to the main page. Step 1 of 4: Choose the web interface mode.				
Web Mode				
Standard Mode     Surveillance Mode				
Ignore the wizard next time Exit Next				

Figure 2-3 Web Mode

The fields that can be configured are described below:

Parameter	Description		
Standard Mode	Select this option to access the Standard Mode after the Smart Wizard was completed.		
Surveillance Mode	Select this option to access the Surveillance Mode after the Smart Wizard was completed.		

Tick the Ignore the wizard next time option to skip the Smart Wizard on the next login.

Click the **Exit** button to discard the changes made, exit the Smart Wizard, and continue to the Web UI.

Click the **Next** button to accept the changes made and continue to the next step.

## **Step 2 - System IP Information**

In this step, we can configure System IP Information.

**NOTE:** The Switch will probe for surveillance devices every 30 seconds. If a surveillance device is not in the same subnet as the switch, it will not be discovered automatically. Place the Switch management IP in the same subnet as the surveillance devices for ONVIF cameras to be added to the Surveillance Mode Web UI automatically.

Welcome to Smart Wizard
Step 2 of 4: The wizard will help to complete settings for System IP address, Netmask, and Gateway.
System IP Information
Static     DHCP
IP Address 10 . 90 . 90 . 90
Netmask 8 (255.0.0.0)
Gateway 0.0.0.0
Ignore the wizard next time Exit Back Next

Figure 2-4 System IP Information

Parameter	Description
Static	Select this option to manually assign and configure the IP address settings for the Switch.
DHCP	Select this option to obtain IP address settings automatically from a DHCP server for the Switch.
IP Address	After selecting the <b>Static</b> option, manually enter the IP address of the Switch here.
Netmask	After selecting the <b>Static</b> option, manually select the Netmask option here.

а

The fields that can be configured are described below:

Parameter	Description
	After selecting the <b>Static</b> option, manually enter the IP address of the default gateway here.

Tick the **Ignore the wizard next time** option to skip the Smart Wizard on the next login.

Click the **Exit** button to discard the changes made, exit the Smart Wizard, and continue to the Web UI.

Click the **Next** button to accept the changes made and continue to the next step.

### **Step 3 - User Accounts Settings**

In this step, we can configure the user account settings. This step can only be modified by a user account with the privilege level of 15.

Welcome to Smart Wizard			
Step 3 of 4: Configure User Account for management.			
User Accounts Settings			
User Name admin Password Type None Password			
Ignore the wizard next time Exit Back Next			

Figure 2-5 User Account Settings

The fields that can be configured are described below:

Parameter	Description			
User Name	Select the user name of the administrator level account with the privilege level of 15.			
Password Type	<ul> <li>Select the password type here. Options to choose from are:</li> <li>None - Specifies that no password will be configured for this user account.</li> <li>Plain Text - Specifies that the password for this user account will be in the plain text form.</li> <li>Encrypted-SHA1 - Specifies that the password for this user account will be in the encrypted form using the SHA1 encryption method.</li> </ul>			

Parameter	Description			
	<ul> <li>Encrypted-MD5 - Specifies that the password for this user account will be in the encrypted form using the MD5 encryption method.</li> </ul>			
Password	Enter the password for the user account either in the plain text format or the encrypted format here based on the previous selection made.			
	In the encrypted format, the password will not be encrypted from plain text to the encrypted format. Instead, the encrypted password must be entered. To encrypt the password from plain text to the encrypted format, refer to the <b>Password Encryption</b> window.			

Tick the Ignore the wizard next time option to skip the Smart Wizard on the next login.

Click the **Exit** button to discard the changes made, exit the Smart Wizard, and continue to the Web UI.

Click the **Back** button to discard the changes made and return to the previous step.

Click the Apply button to accept the changes made and continue to the Web UI.

### **Step 4 - SNMP Settings**

In this step, we can enable or disable the SNMP feature.

Welcome to Smart Wizard	
Step 4 of 4: Enable SNMP	for management.
SNMP	
SNMP   Enabled	• Disabled
Ignore the wizard next time	Exit Back Apply & Save

Figure 2-6 SNMP Window

The fields that can be configured are described below:

Parameter	Description
SNMP	Select the <b>Enabled</b> option to enable the SNMP feature. Select the <b>Disabled</b> option to disable the SNMP feature.

Tick the Ignore the wizard next time option to skip the Smart Wizard on the next login.

Click the **Exit** button to discard the changes made, exit the Smart Wizard, and continue to the Web UI.

Click the **Back** button to discard the changes made and return to the previous step.

Click the Apply & Save button to accept the changes made and continue to the Web UI.

## Web User Interface (Web UI)

## **Areas of the User Interface**

The Web UI on the Switch can be divided into distinct **Areas**. Different areas in the Web UI provide different manageability options to simplify configuration and feature monitoring.

#### **Standard Mode**

After accessing the Web UI in the **Standard Mode**, the following will be displayed:

<b>D-Link</b> Building Networks for People				Image: State Difference     Image: State Difference       Image: State Difference     Image: State Difference

Figure 2-7 Web UI (Standard Mode)

The following Areas can be observed in the above window.

Area Number	Description					
AREA 1	In this area, a graphical near real-time image of the front panel of the Switch is displayed with ports and expansion modules. Port activity is displayed, depending on the specified mode. Some management functions like port monitoring are also accessible here. Click the D-Link logo to go to the D-Link website.					
AREA 2	In this area is a toolbar used to access functions like <b>Save</b> , <b>Tools</b> , the <b>Wizard</b> , <b>Online Help</b> , accessing the Web UI in the <b>Surveillance Mode</b> , customized <b>Language</b> preference, and a <b>Logout</b> option.					
	Click the <b>Surveillance Mode</b> option to change the switch mode from Standard Mode to Surveillance Mode.					
	The user account and IP address currently logged into the Web UI will also be displayed in this toolbar.					
AREA 3	In this area, the software features available in the Web UI of the Switch are grouped into folders containing hyperlinks that will open window frames in area 4.					

Area Number	Description
	There is also a search option in this area that can be used to search for specific feature keywords in the Web UI to easily find the link to the set of features.
AREA 4	In this area, configuration and monitoring window frames are available based on the selections made in area 3.

#### **Surveillance Mode**

After accessing the Web UI in the **Surveillance Mode**, the following will be displayed:

Figure 3-1 Device Information Window

## **System Information Settings**

The user can enter a System Name, System Location, and System Contact to aid in defining the Switch.

To view the following window, click **System > System Information Settings**, as shown below:

System Information Sett	tings	
System Information Settings –		
System Name	Switch	
System Location	255 chars	
System Contact	255 chars	Apply

Figure 3-2 System Information Settings Window

The fields that can be configured are described below:

Parameter	Description						
System Name	Enter a system name for the Switch, if so desired. This name will identify it in the Switch network.						
System Location	Enter the location of the Switch, if so desired. This string can be up to 255 characters long.						
System Contact	Enter a contact name for the Switch, if so desired. This string can be up to 255 characters long.						

Click the **Apply** button to accept the changes made.

## **Peripheral Settings**

This window is used to configure the environment trap settings and environment temperature threshold settings.

#### To view the following window, click **System > Peripheral Settings**, as shown below:

Peripheral Settings		
Environment Trap Settings		
Fan Trap	OEnabled	
Power Trap	OEnabled  OEnabled	
Temperature Trap	OEnabled  OEnabled	Apply
Environment Temperature Threshold Set		
Unit	1	
Thermal		
High Threshold (-100-200)	79 Default	
Low Threshold (-100-200)	11 🔽 Default	Apply

Figure 3-3 Peripheral Settings Window

The fields that can be configured are described below:

Parameter	Description
Fan Trap	Click to enable or disable the fan trap state for waning fan event (fan failed or fan recover).
Power Trap	Click to enable or disable the power trap state for waning power event (power failed or power recover).
Temperature Trap	Click to enable or disable the temperature trap state for waning temperature event (temperature exceeds the thresholds or temperature recover).
Unit	Select the switch unit that will be used for this configuration here.
Thermal	Select the thermal sensor ID.
High Threshold	Enter the high threshold value of the warning temperature setting. The range is from -100 to 200 degree Celsius. Tick the <b>Default</b> check box to return to the default value.
Low Threshold	Enter the low threshold value of the warning temperature setting. The range is from -100 to 200 degree Celsius. Tick the <b>Default</b> check box to return to the default value.

Click the **Apply** button to accept the changes made.

## **Port Configuration**

## **Port Settings**

This window is used to view and configure the Switch's port settings.

To view the following window, click **System > Port Configuration > Port Settings**, as shown below:

	Error Ded	T. D. 4	01-1-		MDIN		Deserved	<b>E</b> 1

Figure 3-4 Port Settings Window

The fields that can be configured are described below:

Parameter	Description			
Unit	Select the switch unit that will be used for this configuration here.			
From Port / To Port	Select the appropriate port range used for the configuration here.			
State	Select this option to enable or disable the physical port here.			
MDIX	<ul> <li>Select the Medium Dependent Interface Crossover (MDIX) option here. Options to choose from are:</li> <li>Auto - Select this option for auto-sensing of the optimal type of cabling.</li> <li>Normal - Select this option for normal cabling. If this option is selected, the port is in the MDIX mode and can be connected to a PC's NIC using a straight-through cable or a port (in the MDIX mode) on another switch through a crossover cable.</li> <li>Cross - Select this option for cross cabling. If this option is selected, the port is in the MDI mode and can be connected</li> </ul>			

Parameter	Description
	to a port (in the MDIX mode) on another switch through a straight cable.
Auto Downgrade	Select this option to enable or disable automatically downgrading advertised speed in case a link cannot be established at the available speed.
Flow Control	Select to turn flow control <b>On</b> or <b>Off</b> here. Ports configured for full- duplex use 802.3x flow control, half-duplex ports use backpressure flow control, and Auto ports use an automatic selection of the two.
Duplex	Select the duplex mode used here. Options to choose from are <b>Auto</b> , <b>Half</b> , and <b>Full</b> .
Speed	Select the port speed option here. This option will manually force the connection on the selected port to connect at the speed specified here. Options to choose from are <b>Auto</b> , <b>10M</b> , <b>100M</b> , <b>1000M</b> , <b>1000M Master</b> , <b>1000M Slave</b> , and <b>10G</b> . The Switch allows users to configure two types of gigabit connections; <b>1000M Master</b> and <b>1000M Slave</b> , which refer to connections running a 1000BASE-T cable for connection between the Switch port and another device capable of a gigabit connection. The master setting (1000M Master) will allow the port to advertise capabilities related to duplex, speed, and physical layer type. The master setting will also determine the master and slave relationship between the two connected physical layers. This relationship is necessary for establishing the timing control between the two physical layers. The timing control is set on a master physical layer by a local source. The slave setting (1000M Slave) uses loop timing, where the timing comes from a data stream received from the master. If one connection is set for 1000M Slave. Any other configuration will result in a link down status for both ports.
Capability Advertised	When the <b>Speed</b> is set to <b>Auto</b> , these capabilities are advertised during auto-negotiation.
Description	Tick the check box to enter a 64 characters description for the corresponding port here.

Click the **Apply** button to accept the changes made.

#### **Port Status**

This window is used to view the Switch's physical port status and settings.

To view the following window,	click System > Port Co	nfiguration > Port Statu	s. as shown below:

Figure 3-7 Port Auto Negotiation Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.

## **Error Disable Settings**

This window is used to configure the sending of SNMP notifications for error disable state.

To view the following window, click **System > Port Configuration > Error Disable Settings**, as shown below:

Error Disable Settings Error Disable Trap Settings Asserted Cleared Notification Rate (0-1000)	Disabled V Disabled V				Apply	
Error Disable Recovery Settings	▼ State	Disabled	V Interval (5-86400)	sec	Apply	
	ErrDisable Cause		State	Interval (sec)		
	Port Security		Disabled	300		
	Storm Control		Disabled	300		
	BPDU Attac		Disabled	300		
	Dynamic AR		Disabled	300		
DHCP Snooping			Disabled	300	300	
	Loopback Detect		Disabled	300		
Interfaces that will be recovered	1 at the next timeout:					

Figure 3-8 Error Disable Settings Window

The fields that can be configured for Error Disable Trap Settings are described below:

Parameter	Description
Asserted	Select this option to enable or disable the notifications when entering into the error disabled state.
Cleared	Select this option to enable or disable the notifications when exiting from the error disabled state.
Notification Rate	Enter the number of traps per minute. The packets that exceed the rate will be dropped. The value is between 0 and 1000.

Click the **Apply** button to accept the changes made.

The fields that can be configured for **Error Disable Recovery Settings** are described below:

Parameter	Description
ErrDisable Cause	Select the error disable causes here. Options to choose from are All, Port Security, Storm Control, BPDU Attack Protection, Dynamic ARP Inspection, DHCP Snooping, and Loopback Detect.
State	Select this option to enable or disable the auto-recovery for an error port caused by the specified cause.
Interval	Enter the time between 5 and 86400 seconds to recover the port.

Click the **Apply** button to accept the changes made.

#### **Jumbo Frame**

This window is used to view and configure the Jumbo Frame size and settings. The Switch supports jumbo frames. Jumbo frames are Ethernet frames with more than 1518 bytes of payload. The Switch supports jumbo frames with a maximum frame size of up to 9216 bytes.

To view the following window,	click System > Port Configuration > Jumbo Frame, as shown	ו below:

Jumbo Frame				<u>^</u>		
Jumbo Frame						
Unit	From Port eth1/0/1	To Port eth1/0/1	Maximum Receive Frame Size (64-9216) 1536 bytes	Apply		
Unit 1 Settings						
	Port		Maximum Receive Frame Size (bytes)			
	eth1/0/1		1536			
	eth1/0/2		1536			
	eth1/0/3		1536			
	eth1/0/4		1536			
	eth1/0/5		1536			
	eth1/0/6		1536			
	eth1/0/7		1536			
	eth1/0/8		1536			
	eth1/0/9		1536	E

	eth1/0/13		1536			
	eth1/0/14		1536			
	eth1/0/15		1536			

Figure 3-9 Jumbo Frame Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Maximum Receive Frame Size	Enter the maximum receive frame size value here. This value must be between 64 and 9216 bytes. By default, this value is 1536 bytes.

Click the **Apply** button to accept the changes made.

## **Interface Description**

This window is used to display the status, administrative status, and description of each port on the Switch.

To view the following window, click **System > Interface Description**, as shown below:

tal Entries: 28			
Interface	Status	Administrative	Description
eth1/0/1	up	enabled	
eth1/0/2	up	enabled	
eth1/0/3	down	enabled	
eth1/0/4	down	enabled	
eth1/0/5	down	enabled	
eth1/0/6	down	enabled	
eth1/0/7	down	enabled	
eth1/0/8	down	enabled	
eth1/0/9	down	enabled	
eth1/0/10	down	enabled	

Figure 3-10 Interface Description Window

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **PoE (PoE Switches Only)**

The **DGS-1510-28P**, **DGS-1510-28XMP**, and **DGS-1510-52XMP** switches support Power over Ethernet (PoE) as defined by the IEEE 802.3af and 802.3at.

**NOTE:** The Power over Ethernet (PoE) settings are only available on the **DGS-1510-28P**, **DGS-1510-28XMP**, and **DGS-1510-52XMP**.

All ports can support PoE up to 30W. Ports 1-24 can supply about 48 VDC power to Powered Devices (PDs) over Category 5 or Category 3 UTP Ethernet cables. The Switch follows the standard PSE (Power Sourcing Equipment) pin-out *Alternative A*, whereby power is sent out over pins 1, 2, 3 and 6. The Switches work with all D-Link 802.3af capable devices.

The Switch includes the following PoE features:

- Auto-discovery recognizes the connection of a PD and automatically sends power to it.
- The Auto-disable feature occur under two conditions: firstly, if the total power consumption exceeds the system power limit; and secondly, if the per port power consumption exceeds the per port power limit.
- Active circuit protection automatically disables the port if there is a short. Other ports will remain active.

Class	Maximum power used by the PD	Maximum power supplied by the Switch
0	12.95 Watts	15.4 Watts
1	3.84 Watts	4 Watts
2	6.49 Watts	7 Watts
3	12.95 Watts	15.4 Watts
4	25.5 Watts	30 Watts

Based on IEEE 802.3af/at, power is received and supplied according to the following classifications:

#### **PoE System**

This window is used to configure the PoE system, and display the detailed power information and PoE chip parameters for PoE modules.

To view the following window, click **System > PoE > PoE System**, as shown below:

PoE System		_				
PoE System						
Unit	Usage Threshold (	(1-99)	Policy Preempt	Trap State		
1 💌	99	%	Disabled 🗸	Disabled		Apply
						Show Detail
Unit D	elivered (W)	Power Budge	et (W)	Usage Threshold (%)	Policy Preempt	Trap State
1	0	370		99	Disabled	Disabled

Figure 3-11 PoE System Window

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
Usage Threshold	Enter the usage threshold to generate a log and send the corresponding standard notification. The range is from 1 to 99 percent.
Policy Preempt	<ul> <li>Select to enable or disable the policy preempt function.</li> <li>When this function is <b>Enabled</b>, under the power shortage condition, power provisioned to PDs with lower priority will instead be provisioned to PDs with higher priority.</li> <li>When this function is <b>Disabled</b>, the power management mode will use the first in, first serviced method.</li> </ul>
Trap State	Select this option to enable or disable the sending of PoE notifications.

The fields that can be configured are described below:

Click the **Apply** button to accept the changes made.

Click the **Show Detail** button to see the PoE system Parameters table at the bottom of the window.

After clicking the **Show Detail** button, the following table will appear.

Unit	Max Ports	Device ID	SW Version
1	24	E111	17

Figure 3-12 PoE System (Show Detail) Window

## **PoE Status**

This window is used to configure the description, and display the PoE status of each port.

One of the following PoE port states will be displayed in the table:

- Disabled
- Searching (remote PD is not connected)
- **Requesting** (remote PD is inserted but no power is provided yet)
- **Delivering** (remote PD is inserted and power is provided)
- **Faulty** (maintain power signature absent, PD short, overloading, power denied, thermal shutdown, startup failure, or classification failure)

To view the following window, click **System > PoE > PoE Status**, as shown below:

PoE Status						
PoE Status						
Unit From Port	To Port eth1/0/1		cription hars			Apply
Unit 1 Settings						
Port	State	Class	Max (W)	Used (W)	Description	
eth1/0/1	Searching	N/A	0.0	0.0		Delete Description

eth1/0/10	Searching	N/A	0.0	0.0		Delete Description

Figure 3-13 PoE Status Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Description	Enter the text that describes the PD connected to a PoE interface. The maximum length is 32 characters.

Click the **Delete Description** button to clear the setting in the corresponding Description field.

Click the **Apply** button to accept the changes made.

## **PoE Configuration**

This window is used to configure the PoE port.

To view the following window, click **System > PoE > PoE Configuration**, as shown below:

E Configuration	on	_			
E Configuration —					
nit From Po	rt To Port	Priority Le	gacy Support Mode Max Wattage	(1000-30000) Time Ran	ge
1 T eth1/0/*	1 • eth1/0/1 •	Low 🔻 🖸	isabled  Auto		
					Apply
nit 1 Settings					
Port	Admin	Priority	Legacy Support	Time Range	
eth1/0/1	Auto	Low	Disabled		Delete Time Range
eth1/0/2	Auto	Low	Disabled		Delete Time Range
eth1/0/3	Auto	Low	Disabled		Delete Time Range
eth1/0/4	Auto	Low	Disabled		Delete Time Range

eth1/0/10	Auto	Low	Disabled		Delete Time Range
eth1/0/11	Auto	Low	Disabled		Delete Time Range

Figure 3-14 PoE Configuration Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Priority	Select the priority for provisioning power to the port. Options to choose from are <b>Critical</b> , <b>High</b> and <b>Low</b> .
Legacy Support	Select this option to enable or disable the support of legacy PD.
Mode	Select the power management mode for the PoE ports. Options to choose from are <b>Auto</b> and <b>Never</b> .
Max Wattage	When selecting <b>Auto</b> in the <b>Mode</b> drop-down list, this option appears. Tick the check box and enter the maximum wattage of power that can be provisioned to the auto-detected PD. If the value is not entered, the class of the PD automatically determines the maximum wattage, which can be provisioned. The valid range for maximum wattage is between 1000 mW and 30000 mW.
Time Range	When selecting <b>Auto</b> in the <b>Mode</b> drop-down list, this option appears. Tick the check box and enter the name of the time range to determine the activation period.

Click the **Delete Time Range** button to clear the setting in the corresponding Time Range field. Click the **Apply** button to accept the changes made.

#### **PD** Alive

This window is used to configure the PD Alive function for PDs connected to the PoE ports. The ping function is used to check if PDs, connected to the PoE ports, are active or not. When PDs appear to be inactive, the specified action (Reset, Notify, or Both) will be taken.

To view the following window	, click <b>System &gt; PoE &gt; PD Alive</b> , as shown below:
TO VIEW LITE TOHOWING WINDOW,

#### Figure 3-15 PD Alive Window

The fields that can be configured are described below:

Parameter	Description	
Unit	Select the switch unit that will be used for this configuration here.	
From Port / To Port	Select the appropriate port range used for the configuration here.	
PD Alive State	Select to enable or disable the PD Alive function on the specified port(s).	
PD IP Address	Enter the IP address of the PD here.	
Poll Interval	Enter the poll interval here. This is the interval between ping messages from the system to PDs connected to the PoE port(s). The range is from 10 to 300 seconds.	
Retry Count	Enter the retry count here. This is the amount of ping messages that will be sent (at each interval) when PDs are not responding. The range is from 0 to 5.	
Waiting Time	Enter the waiting time here. This is how long the system will wait before sending ping messages to the PD connected to the PoE port after a 'Reset' action was taken. The range is from 30 to 300 seconds.	
Action	<ul> <li>Select the action that will be taken here. Options to choose from are:</li> <li>Reset - Specifies to reset the PoE port state (turn PoE off and on).</li> <li>Notify - Specifies to send logs and traps to notify the administrator.</li> <li>Both - Specifies to send logs and traps to notify the administrator and to reset the PoE port state (turn PoE off and on).</li> </ul>	

Click the **Apply** button to accept the changes made.

### **PoE Statistics**

This window is used to display the PoE statistics.

To view the following window, click	ick System > PoE > PoE Statistics	as shown below:
-------------------------------------	-----------------------------------	-----------------

PoE Statistics PoE Statistics Table						
Unit 1	<b>~</b>					
Unit 1 Settings						Clear All
Port	MPS Absent	Overload	Short	Power Denied	Invalid Signature	
eth1/0/1	0	0	0	0	92	Clear
eth1/0/2	0	0	0	0	92	Clear
eth1/0/3	0	0	0	0	93	Clear
eth1/0/4	0	0	0	0	93	Clear
eth1/0/5	0	0	0	0	35	Clear
eth1/0/6	0	0	0	0	35	Clear
eth1/0/7	0	0	0	0	29	Clear

eth1/0/9	0	0	0	0	82	Clear
eth1/0/10	0	0	0	0	81	Clear

Figure 3-16 PoE Statistics Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.

The fields that are displayed in the table are described below:

Parameter	Description
MPS Absent	This field is incremented when the PD's Maintain Power Signature (MPS) is absent.
Overload	This field is incremented when the power demand exceeds the maximum output power supplied.
Short	This field is incremented when the internal circuit of the PD shorted out.
Power Denied	This field is incremented when power was denied to the PD by the system.
Invalid Signature	This field is incremented when an invalid PD signature was detected by the system.

Click the Clear All button to clear PoE statistics for all ports.

Click the **Clear** button to clear the PoE statistics for the corresponding port.

### **PoE Measurement**

This window is used to display the PoE measurement.

PoE Measurement

# **System Log**

## **System Log Settings**

This window is used to view and configure the system's log settings.

To view the following window, click **System > System Log > System Log Settings**, as shown below:

System Log Settings		_
Global State		
Source Interface State Type	Disabled VLAN VID (1-4094)	Apply
1,100		Арріу
Buffer Log Settings		
Buffer Log State	Enabled	
Severity	4(Warnings)	
Discriminator Name	15 chars	
Write Delay (0-65535)	300 sec Infinite	Apply
Console Log Settings		
Console Log State	Disabled	
Severity	4(Warnings)	
Discriminator Name	15 chars	Apply
Monitor Log Settings		
Monitor Log State	Disabled	
Severity	4(Warnings)	
Discriminator Name	15 chars	Apply

Figure 3-19 System Log Settings Window

The fields that can be configured for Global State are described below:

Parameter	Description
Source Interface State	Select this option to enable or disable the source interface's global state.
Туре	Select the type of interface that will be used. Option to choose from is <b>VLAN</b> .
VID	Enter the VLAN ID used here. The value is between 1 and 4094.

Click the **Apply** button to accept the changes made.

The fields that can be configured for **Buffer Log Settings** are described below:

Parameter	Description
Buffer Log State	Select whether the enable or disable the buffer log's global state here. Options to choose from are <b>Enable</b> , <b>Disabled</b> , and <b>Default</b> . When selecting the <b>Default</b> option, the buffer log's global state will follow the default behavior.
Severity	Select the severity value of the type of information that will be logged. Options to choose from are 0 (Emergencies), 1 (Alerts), 2 (Critical), 3 (Errors), 4 (Warnings), 5 (Notifications), 6 (Informational), and 7 (Debugging).
Discriminator Name	Enter the discriminator name used here. This name can be up to 15 characters long.

Parameter	Description
Write Delay	Enter the interval for periodic writing of the logging buffer to FLASH. This value must be between 0 and 65535 seconds. By default, this value is 300 seconds. Tick the <b>Infinite</b> option, to disable the write delay feature.

Click the **Apply** button to accept the changes made.

The fields that can be configured for **Console Log Settings** are described below:

Parameter	Description
Console Log State	Select to globally enable or disable the state of the console log here.
Severity	Select the severity value of the type of information that will be logged. Options to choose from are 0 (Emergencies), 1 (Alerts), 2 (Critical), 3 (Errors), 4 (Warnings), 5 (Notifications), 6 (Informational), and 7 (Debugging).
Discriminator Name	Enter the discriminator name used here. This name can be up to 15 characters long.

Click the **Apply** button to accept the changes made.

The fields that can be configured for **Monitor Log Settings** are described below:

Parameter	Description
Monitor Log State	Select to globally enable or disable the state of the monitor log here.
Severity	Select the severity value of the type of information that will be logged. Options to choose from are 0 (Emergencies), 1 (Alerts), 2 (Critical), 3 (Errors), 4 (Warnings), 5 (Notifications), 6 (Informational), and 7 (Debugging).
Discriminator Name	Enter the discriminator name used here. This name can be up to 15 characters long.

Click the **Apply** button to accept the changes made.

## **System Log Discriminator Settings**

This window is used to view and configure the system log's discriminator settings.

To view the following window, click **System > System Log > System Log Discriminator Settings**, as shown below:

System Log Discriminat	tor Settings		_	_	_	_	_	
Discriminator Log Settings

#### Figure 3-20 System Log Discriminator Settings Window

The fields that can be configured are described below:

Parameter	Description
Discriminator Name	Enter the discriminator name here. This name can be up to 15 characters long.
Action	Select the facility's behavior option and the type of facility that will be associated with the selected behavior here. Behavior options to choose from are <b>Drops</b> and <b>Includes</b> .
Severity	Select the severity behavior option and the value of the type of information that will be logged. Behavior options to choose from are <b>Drops</b> and <b>Includes</b> . Severity value options to choose from are <b>0</b> (Emergencies), <b>1</b> (Alerts), <b>2</b> (Critical), <b>3</b> (Errors), <b>4</b> (Warnings), <b>5</b> (Notifications), <b>6</b> (Informational), and <b>7</b> (Debugging).

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

## **System Log Server Settings**

This window is used to view and configure system log's server settings.

To view the following window, click **System > System Log > System Log Server Settings**, as shown below:

System Log Server Settin	ngs				_	_
Log Server						
Host IPv4 Address			O Host IPv6 Address	2013::1		
UDP Port (1024-65535)	514		Severity	4(Warnings)		
Facility	23	$\checkmark$	Discriminator Name	15 chars		
						Apply
Total Entries: 1						
Server IP	Severity	Facility	Discrimi	nator Name	UDP Port	
10.0.90.254	Warnings	23			514	Delete

The fields that can be configured are described below:

Parameter	Description
Host IPv4 Address	Enter the system log server's IPv4 address here.
Host IPv6 Address	Enter the system log server's IPv6 address here.
UDP Port	Enter the system log server's UDP port number here. This value must be 514 or between 1024 and 65535. By default, this value is 514.
Severity	Select the severity value of the type of information that will be logged. Options to choose from are 0 (Emergencies), 1 (Alerts), 2 (Critical), 3 (Errors), 4 (Warnings), 5 (Notifications), 6 (Informational), and 7 (Debugging).
Facility	Select the facility value here. Options to choose from are 0 to 23.
Discriminator Name	Enter the discriminator name here. This name can be up to 15 characters long.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

### System Log

This window is used to view and clear the system log.

To view the following window, click System > System Log > System Log, as shown below:

tem Log			
			Clear Log
tal Entries: 2

Unit	Select the switch unit that will be used for this configuration here.

Click the Clear Attack Log button to clear the system attack log entries displayed in the table.

## Time and SNTP

The Simple Network Time Protocol (SNTP) is a protocol for synchronizing computer clocks through the Internet. It provides comprehensive mechanisms to access national time and frequency dissemination services, organize the SNTP subnet of servers and clients, and adjust the system clock in each participant.

### **Clock Settings**

This window is used to configure the time settings for the Switch.

To view the following window, click System > Time and SNTP > Clock Settings, as shown below:

Clock Settings		
Clock Settings		
Time (HH:MM:SS)	00:54:54	
Date (DD / MM / YYYY)	01/01/2000	
		Apply

The fields that can be configured are described below:

Parameter	Description	
Time (HH:MM:SS)	Enter the current time in hours, minutes, and seconds.	
Date (DD / MM / YYYY)	Enter the current day, month, and year to update the system clock.	

Click the **Apply** button to accept the changes made.

## **Time Zone Settings**

This window is used to configure time zones and Daylight Savings Time settings for SNTP.

To view the following window, click **System > Time and SNTP > Time Zone Settings**, as shown below:

Time Zone Settings	
Summer Time State	Disabled
Time Zone	
Recurring Setting

Offset	60
	Apply

Figure 3-25 Time Zone Settings Window

The fields that can be configured are described below:

Parameter	Description
Summer Time State	<ul> <li>Select the summer time setting. Options to choose from are:</li> <li>Disabled - Select to disable the summer time setting.</li> <li>Recurring Setting - Select to configure the summer time that should start and end on the specified weekday of the specified month.</li> <li>Date Setting - Select to configure the summer time that should start and end on the specified date of the specified month.</li> </ul>
Time Zone	Select to specify the offset of the local time zone from the Coordinated Universal Time (UTC).

The fields that can be configured for **Recurring Setting** are described below:

Parameter	Description
From: Week of the Month	Select week of the month that summer time will start.

DGS-1510 Series Gigabit Ethernet SmartPro Switch Web UI Reference Guide

Parameter	Description	
From: Day of the Week	Select the day of the week that summer time will start.	
From: Month	Select the month that summer time will start.	
From: Time (HH:MM)	Select the time of the day that summer time will start.	
To: Week of the Month	Select week of the month that summer time will end.	
To: Day of the Week	Select the day of the week that summer time will end.	
To: Month	Select the month that summer time will end.	
To: Time (HH:MM)	Select the time of the day that summer time will end.	
Offset	Enter the number of minutes to add during summer time. The default value is 60. The range of this offset is 30, 60, 90 and 120.	

The fields that can be configured for **Date Setting** are described below:

Parameter	Description	
From: Date of the Month	Select date of the month that summer time will start.	
From: Month	Select the month that summer time will start.	
From: Year	Enter the year that the summer time will start.	
From: Time (HH:MM)	Select the time of the day that summer time will start.	
To: Date of the Month	Select date of the month that summer time will end.	
To: Month	Select the month that summer time will end.	
To: Year	Enter the year that the summer time will end.	
To: Time (HH:MM)	Select the time of the day that summer time will end.	
Offset	Enter the number of minutes to add during summer time. The default value is 60. The range of this offset is 30, 60, 90 and 120.	

Click the **Apply** button to accept the changes made.

## **SNTP Settings**

This window is used to configure the time settings for the Switch.

To view the following window, click **System > Time and SNTP > SNTP Settings**, as shown below:

SNIP Settings			
SNTP Global Settings			
Current Time Source	System Clock		
SNTP State	Disabled 🗸		
Poll Interval (30-99999)	720 sec		Apply
SNTP Server Setting			
<ul> <li>IPv4 Address</li> </ul>		O IPv6 Address	2013::1
			Add
Total Entries: 1			
SNTP Server	Version	Last Receive	
10.90.90.1	-	-	Delete

Figure 3-26 SNTP Settings Window

The fields that can be configured for **SNTP Global Settings** are described below:

Parameter	Description	
SNTP State	Select this option to enable or disable SNTP.	
Poll Interval	Enter the synchronizing interval in seconds. The value is from 30 to 99999 seconds. The default interval is 720 seconds.	

Click the **Apply** button to accept the changes made.

The fields that can be configured for SNTP Server Setting are described below:

Parameter	Description
IPv4 Address	Enter the IP address of the SNTP server, which provides the clock synchronization.
IPv6 Address	Enter the IPv6 address of the SNTP server, which provides the clock synchronization.

Click the Add button to add the SNTP server.

Click the **Delete** button to remove the specified entry.

## **Time Range**

This window is used to view and configure the time range settings.

To view the following window, click **System > Time Range**, as shown below:

Time Range		_		_		_
Time Range						
Range Name	32 chars	Daily				
From: Week	Sun	$\checkmark$	To: Week	Sun	End Weekday

## **User Account Settings**

This window is used to create and configure the user accounts. The active user account sessions can be viewed.

There are several configuration options available in the Web User Interface (Web UI). The set of configuration options available to the user depends on the account's **Privilege Level**. A user account created with a higher privilege level will be given access to configure more features than a user account created with a lower privilege level.

The pre-defined privilege levels for user accounts are:

- **Basic User (Privilege Level 1)** This user account level has the lowest priority of the user accounts. The purpose of this type of user account level is for basic system checking.
- **Operator (Privilege Level 12)** This user account level is used to grant system configuration rights for users who need to change or monitor system configuration, except for security related information such as user accounts and SNMP account settings.
- Administrator (Privilege Level 15) This administrator user account level can monitor all system information and change any of the system configuration settings expressed in this guide.

To view the following window, click **Management > User Account Settings**, as shown below:

User Management Settings	Session Table		
er Name 32 chars	Privilege (1-15)		
ssword Type None 💌	Password		Apply
tal Entries: 1			
User Name	Privilege	Password	
	15	******	Delete

Figure 4-1 User Management Settings Window

The fields that can be configured are described below:

Parameter	Description
User Name	Enter the user account name here. This name can be up to 32 characters long.

Parameter	Description
Privilege	Enter the privilege level for this account here. This value must be between 1 and 15.
Password Type	Select the password type for this user account here. Options to choose from are <b>None</b> , <b>Plain Text</b> , <b>Encrypted-SHA1</b> , and <b>Encrypted-MD5</b> . When selecting <b>Encrypted-SHA1</b> or <b>Encrypted-MD5</b> , the password will not be encrypted from the plain-text format to the encrypted format. Instead, the encrypted password must be entered. To encrypt the password from the plain-text format to the encrypted format, refer to the <b>Password Encryption</b> window.
Password	After selecting <b>Plain Text</b> , <b>Encrypted-SHA1</b> , or <b>Encrypted-MD5</b> as the <b>Password Type</b> , enter the password for this user account here.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified user account entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

After clicking the **Session Table** tab, the following page will appear.

User Managemen		sion Table			
Total Entries: 2					
Туре	User Name	Privilege	Login Time	IP Address

* web	admin	15	5M5S	10.90.90.1	Edit
			1/1  <	< 1 > >  Go	

Figure 4-2 Session Table Window

A list of active user account session will be displayed.

Click the Edit button to access and configure the User Privilege settings.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

After selecting the **Edit** button, the following page will appear.

User Privilege		
User Privilege		
Action	Enabled Obisabled	
Privilege	15 🗸	
Password	32 chars	Apply Back

Figure 4-3 User Privilege Window

Parameter	Description
Action	Select to enable or disable user level security.
Privilege	Select the privilege level here. The range is from 1 to 15.
Password	Enter the password here. This can be up to 32 characters long.

The fields that can be configured are described below:

Click the **Apply** button to accept the changes made.

Click the **Back** button to return to the previous page.

## **Password Encryption**

This window is used to configure whether to save the encryption of the password in the configuration file.

To view the following window, click **Management > Password Encryption**, as shown below:

Password Encryption		
Password Encryption Settings		
Password Encryption State	<ul> <li>Enabled          <ul> <li>Disabled</li> </ul> </li> </ul>	
Password Type	Encrypted-SHA1	Apply

#### Figure 4-4 Password Encryption Window

The fields that can be configured are described below:

Parameter	Description
Password Encryption State	Select this option to enable or disable the encryption of the password before stored in the configuration file.
Password Type	After the <b>Password Encryption State</b> is <b>Enabled</b> , this filed will be available. Options to choose from are <b>Encrypted-SHA1</b> and <b>Encrypted-MD5</b> .

Click the **Apply** button to accept the changes made.

# **Login Method**

This window is used to configure the login method for each management interface that this Switch supports.

To view the following window, click **Management > Login Method**, as shown below:

Login Method		
Enable Password

Application	Password	
Telnet	*****	Delete

Figure 4-5 Login Method Window

The fields that can be configured for **Enable Password** settings are described below:

Parameter	Description
Level	Select the password level here. This value must be between 1 and 15.
Password Type	Select the password type here. Options to choose from are <b>Plain</b> <b>Text</b> , <b>Encrypted-SHA1</b> , and <b>Encrypted-MD5</b> . When selecting <b>Encrypted-SHA1</b> or <b>Encrypted-MD5</b> , the password will not be encrypted from the plain-text format to the encrypted format. Instead, the encrypted password must be entered. To encrypt the password from the plain-text format to the encrypted format, refer to the <b>Password Encryption</b> window.
Password	After selecting <b>Plain Text</b> , <b>Encrypted-SHA1</b> , or <b>Encrypted-MD5</b> as the <b>Password Type</b> , enter the password for this user account here.

Click the **Apply** button to accept the changes made.

The **Login Method** section will only be available when Authentication, Authorization, and Accounting (AAA) feature is disabled. The fields that can be configured for **Login Method** settings are described below:

Parameter	Description
Login Method	After clicking the <b>Edit</b> button, this parameter can be configured. Select the login method for the specified application here. Options to choose from are <b>No Login</b> , <b>Login</b> , and <b>Login Local</b> . <b>No Login</b> , as the name implies, requires no login authentication to access the specified application. <b>Login</b> will require the user to enter a password when trying to access the application specified. <b>Login Local</b> requires the user to enter a username and a password to access the specified application.

Click the **Edit** button to modify the corresponding login method.

Click the **Apply** button to accept the changes made.

The fields that can be configured	for Login Password settings are described below:	
Parameter	Description	
Application	Select the application that will be configured here. Options to choose from are <b>Console</b> , <b>Telnet</b> and <b>SSH</b> .	
Password Type	Select the password encryption type that will be used here. Options to choose from are <b>Plain Text</b> , <b>Encrypted-SHA1</b> , and <b>Encrypted-MD5</b> .	

application is set as Login.

Enter the password for the selected application here. This password will be used when the **Login Method** for the specified

The fields that can be configured for **Login Password** settings are described below:

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the password from the specified application.

### SNMP

Password

Simple Network Management Protocol (SNMP) is an OSI Layer 7 (Application Layer) designed specifically for managing and monitoring network devices. SNMP enables network management stations to read and modify the settings of gateways, routers, switches, and other network devices. Use SNMP to configure system features for proper operation, monitor performance, and detect potential problems in the Switch, switch group, or network.

Managed devices that support SNMP include software (referred to as an agent), which runs locally on the device. A defined set of variables (managed objects) is maintained by the SNMP agent and used to manage the device. These objects are defined in a Management Information Base (MIB), which provides a standard presentation of the information controlled by the on-board SNMP agent. SNMP defines both the format of the MIB specifications and the protocol used to access this information over the network.

The Switch supports the SNMP versions 1, 2c, and 3. The three versions of SNMP vary in the level of security provided between the management station and the network device.

In SNMPv1 and SNMPv2c, user authentication is accomplished using 'community strings', which function like passwords. The remote user SNMP application and the Switch SNMP must use the same community string. SNMP packets from any station that has not been authenticated are ignored (dropped).

The default community strings for the Switch used for SNMPv1 and SNMPv2c management access are:

- **public** Allows authorized management stations to retrieve MIB objects.
- private Allows authorized management stations to retrieve and modify MIB objects.

SNMPv3 uses a more sophisticated authentication process that is separated into two parts. The first part is to maintain a list of users and their attributes that are allowed to act as SNMP managers. The second part describes what each user on that list can do as an SNMP manager.

The Switch allows groups of users to be listed and configured with a shared set of privileges. The SNMP version may also be set for a listed group of SNMP managers. Thus, you may create a group of SNMP managers that are allowed to view read-only information or receive traps using SNMPv1 while assigning a higher level of security to another group, granting read/write privileges using SNMPv3.

Using SNMPv3 individual users or groups of SNMP managers can be allowed to perform or be restricted from performing specific SNMP management functions. The functions allowed or restricted are defined using the Object Identifier (OID) associated with a specific MIB. An additional layer of security is available for SNMPv3 in that SNMP messages may be encrypted. To read more about how to configure SNMPv3 settings for the Switch read the next section.

#### <u>Traps</u>

Traps are messages that alert network personnel of events that occur on the Switch. The events can be as serious as a reboot (someone accidentally turned OFF the Switch), or less serious like a port status change. The Switch generates traps and sends them to the trap recipient (or network manager). Typical traps include trap messages for Authentication Failure, Topology Change, and Broadcast/Multicast Storm.

#### MIBs

The Switch in the Management Information Base (MIB) stores management and counter information. The Switch uses the standard MIB-II Management Information Base module. Consequently, values for MIB objects can be retrieved from any SNMP-based network management software. In addition to the standard MIB-II, the Switch also supports its own proprietary enterprise MIB as an extended Management Information Base. Specifying the MIB Object Identifier may also retrieve the proprietary MIB. MIB values can be either read-only or read-write.

The Switch incorporates a flexible SNMP management for the switching environment. SNMP management can be customized to suit the needs of the networks and the preferences of the network administrator. Use the SNMP V3 menus to select the SNMP version used for specific tasks.

The administrator can specify the SNMP version used to monitor and control the Switch. The three versions of SNMP vary in the level of security provided between the management station and the network device.

SNMP settings are configured using the menus located on the SNMP V3 folder of the Web manager. Workstations on the network that are allowed SNMP privileged access to the Switch can be restricted with the Management Station IP Address menu.

#### **SNMP Global Settings**

This window is used to configure the SNMP global settings and trap settings.

To view the following window, click **Management > SNMP > SNMP Global Settings**, as shown below:

SNMP Global Settings	
SNMP Global Settings	
SNMP Global State	<ul> <li>Enabled          <ul> <li>Disabled</li> </ul> </li> </ul>
SNMP Response Broadcast Request	Enabled     Disabled
SNMP UDP Port (1-65535)	161
Trap Source Interface	Not Specified
	IP interface's address will be chosen as the packet's source IP address.
Trap Settings	
Trap Global State	O Enabled
SNMP Authentication Trap	
Port Link Up	
Port Link Down	
Coldstart	
Warmstart	Apply

Figure 4-6 SNMP Global Settings Window

Parameter	Description
SNMP Global State	Select this option to enable or disable the SNMP feature.
SNMP Response Broadcast Request	Select this option to enable or disable the server to response to broadcast SNMP GetRequest packets.
SNMP UDP Port	Enter the SNMP UDP port number. The range is from 1 to 65535.
Trap Source Interface	Enter the interface whose IP address will be used as the source address for sending the SNMP trap packet.

The fields that can be configured for **SNMP Global Settings** are described below:

The fields that can be configured for Trap Settings are described below:

Parameter	Description
Trap Global State	Select this option to enable or disable the sending of all or specific SNMP notifications.
SNMP Authentication Trap	Tick this option to control the sending of SNMP authentication failure notifications. An authenticationFailuretrap is generated when the device receives an SNMP message that is not properly authenticated. The authentication method depends on the version of SNMP being used. For SNMPv1 or SNMPv2c, authentication failure occurs if packets are formed with an incorrect community string. For SNMPv3, authentication failure occurs if packets are formed with an incorrect SHA/MD5 authentication key.

Parameter	Description
Port Link Up	Tick this option to control the sending of port link up notifications. A linkup trap is generated when the device recognizes that one of the communication links has come up.
Port Link Down	Tick this option to control the sending of port link down notifications. A linkDown trap is generated when the device recognizes a failure in one of the communication links.
Coldstart	Tick this option to control the sending of SNMP coldStart notifications.
Warmstart	Tick this option to control the sending of SNMP warmStart notifications.

Click the **Apply** button to accept the changes made.

## **SNMP Linkchange Trap Settings**

This window is used to configure the SNMP Linkchange trap settings.

To view the following window, click **Management > SNMP > SNMP Linkchange Trap Settings**, as shown below:

NMP Linkchange Trap S		_		
SNMP Linkchange Trap Settings				
Unit From Port	To Port	Trap Sending	Trap State	
1 eth1/0/1	eth1/0/1 💌	Disabled 💌	Disabled 💌	Apply
Port		Trap Sending		Trap State
eth1/0/1		Enabled		Enabled
eth1/0/2		Enabled		Enabled
eth1/0/3		Enabled		Enabled
eth1/0/4		Enabled		Enabled
eth1/0/5		Enabled		Enabled
eth1/0/6		Enabled		Enabled
eth1/0/7		Enabled		Enabled
eth1/0/8		Enabled		Enabled
eth1/0/9		Enabled		Enabled
eth1/0/10		Enabled		Enabled
eth1/0/11		Enabled		Enabled
eth1/0/12		Enabled		Enabled
eth1/0/13		Enabled		Enabled
eth1/0/14		Enabled		Enabled
eth1/0/15		Enabled		Enabled

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Trap Sending	Select this option to enable or disable the sending of the SNMP notification traps that is generated by the system.
Trap State	Select this option to enable or disable the SNMP link change trap.

Click the **Apply** button to accept the changes made.

### **SNMP View Table Settings**

This window is used to assign views to community strings that define which MIB objects can be accessed by a remote SNMP manager. The SNMP Group created with this table maps SNMP users (identified in the SNMP User Table) to the views created in the previous window.

To view the following window, click **Management > SNMP > SNMP View Table Settings**, as shown below:

MP View Settings				
ïew Name *	32 chars			
ubtree OID *	N.N.NN			
/iew Type	Included 🔻			
Mandatory Field				Add
otal Entries: 8				
View Name	Subt	ree OID	View Type	
restricted	1.3.6	.1.2.1.1	Included	Delete
restricted	1.3.6	1.2.1.11	Included	Delete
	40.04	6.3.10.2.1	Included	Delete
restricted	1.3.0.1	0.3.10.2.1	moludou	Delete
restricted restricted		6.3.11.2.1	Included	Delete
	1.3.6.1			
restricted	1.3.6.1	6.3.11.2.1	Included	Delete
restricted restricted	1.3.6.1	6.3.11.2.1	Included Included	Delete

#### Figure 4-8 SNMP View Table Settings Window

The fields that can be configured are described below:

Parameter	Description		
View Name	Type an alphanumeric string of up to 32 characters. This is used to identify the new SNMP view being created.		
Subtree OID	Type the Object Identifier (OID) Subtree for the view. The OID identifies an object tree (MIB tree) that will be included or excluded from access by an SNMP manager.		
View Type	<ul> <li>Select the view type here. Options to choose from are:</li> <li>Included - Select to include this object in the list of objects that an SNMP manager can access.</li> <li>Excluded - Select to exclude this object from the list of objects that an SNMP manager can access.</li> </ul>		

Click the **Add** button to add a new entry based on the information entered.

Click the **Delete** button to remove the specified entry.

#### **SNMP Community Table Settings**

This window is used to create an SNMP community string to define the relationship between the SNMP manager and an agent. The community string acts like a password to permit access to the agent on the Switch.

One or more of the following characteristics can be associated with the community string:

- An Access List of IP addresses of SNMP managers that are permitted to use the community string to gain access to the Switch's SNMP agent.
- Any MIB view that defines the subset of all MIB objects will be accessible to the SNMP community.

Read/write or read-only level permission for the MIB objects accessible to the SNMP community.

To view the following window, click **Management > SNMP > SNMP Community Table Settings**, as shown below:

NMP Community Settin	gs				
Key Type Community Name View Name Access Right P Access-List Name	Plain Text 32 chars 32 chars Read Only 32 chars				
Fotal Entries: 2 Community Na	ame	View Name	Access Right	IP Access-List Name	Add
private		CommunityView	TW RUCESS RUght		Delete
		CommunityView			

Figure 4-9 SNMP Community Table Settings Window

The fields that can be configured are described below:

Parameter	Description
Кеу Туре	Select the key type for the SNMP community. Options to choose from are <b>Plain Text</b> , and <b>Encrypted</b> .
Community Name	Enter an alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch's SNMP agent.
View Name	Enter an alphanumeric string of up to 32 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch. The view name must exist in the SNMP View Table.
Access Right	<ul> <li>Select the access right here. Options to choose from are:</li> <li>Read Only - SNMP community members using the community string created can only read the contents of the MIBs on the Switch.</li> <li>Read Write - SNMP community members using the community string created can read from, and write to the contents of the MIBs on the Switch.</li> </ul>
IP Access-List Name	Enter the name of the standard access list to control the user to use this community string to access to the SNMP agent.

Click the **Add** button to add a new entry based on the information entered.

Click the **Delete** button to remove the specified entry.

### **SNMP Group Table Settings**

An SNMP Group created with this table maps SNMP users (identified in the SNMP User Table) to the views created in the previous window.

To view the following window, click **Management > SNMP > SNMP Group Table Settings**, as shown below:

SNMP Group	Table Settings			_	_		
SNMP Group Sett	ings						
Security Level	Group Name     32 chars     Read View Name     32 chars       User-based Security Model     SNMPv1     Write View Name     32 chars       Security Level     NoAuthNoPriv     Notify View Name     32 chars       IP Access-List Name     32 chars     IP						
Total Entries: 5							
Group Name	Read View Name	Write View Name	Notify View Name	Security Model	Security Level	IP Access-List Name	
public	CommunityV		CommunityV	v1			Delete
public	CommunityV		CommunityV	v2c			Delete
initial	restricted		restricted	v3	NoAuthNoPriv		Delete
private	CommunityV	CommunityV	CommunityV	v1			Delete
private	CommunityV	CommunityV	CommunityV	v2c			Delete

Figure 4-10 SNMP Group Table Settings Window

The fields that can be configured are described below:

Parameter	Description	
Group Name	Enter the group name of a maximum of 32 characters. The syntax is general string that does not allow space.	
User-based Security Model	<ul> <li>Select the security model here. Options to choose from are:</li> <li>SNMPv1 - Select to allow the group user to use the SNMPv1 security model.</li> <li>SNMPv2c - Select to allow the group user to use the SNMPv2c security model.</li> <li>SNMPv3 - Select to allow the group user to use the SNMPv3</li> </ul>	
Security Level	security model. When selecting <b>SNMPv3</b> in the <b>User-based Security Model</b> drop- down list, this option is available.	
	<ul> <li>NoAuthNoPriv - Specify that there will be no authorization and no encryption of packets sent between the Switch and a remote SNMP manager.</li> <li>AuthNoPriv - Specify that authorization will be required, but there will be no encryption of packets sent between the Switch and a remote SNMP manager.</li> <li>AuthPriv - Specify that authorization will be required, and that packets sent between the Switch and a remote SNMP manger will be encrypted.</li> </ul>	
IP Access-List Name	Enter the standard IP access control list (ACL) to associate with the group.	
Read View Name	Enter the read view name that the group user can access.	
Write View Name	Enter the write view name that the group user can access.	
Notify View Name	Enter a write view name that the group user can access. The notify view describes the object that can be reported its status via trap packets to the group user.	

Click the **Add** button to add a new entry based on the information entered.

Click the **Delete** button to remove the specified entry.

## **SNMP Engine ID Local Settings**

The Engine ID is a unique identifier used for SNMP V3 implementations on the Switch.

To view the following window, click **Management > SNMP > SNMP Engine ID Local Settings**, as shown below:

SNMP Engine ID Local Settings				
SNMP Engine ID Local Settings				
Engine ID 800000ab033c1e04a1b9e000	Default Apply			
Engine ID length is 24, the accepted character is from 0 to F.				

Figure 4-11 SNMP Engine ID Local Settings Window

The fields that can be configured are described below:

Parameter	Description
Engine ID	Enter the engine ID string with the maximum of 24 characters.

Click the **Default** button to revert the engine ID to the default.

Click the Apply button to accept the changes made.

### **SNMP User Table Settings**

This window is used to configure and display the SNMP users that are currently configured on the Switch.

To view the following window, click **Management > SNMP > SNMP User Table Settings**, as shown below:

SNMP User Table Settin	gs			_		
SNMP User Settings						
User Name *	32 chars					
Group Name *	32 chars					
SNMP Version	v1 🗸	·				
SNMP V3 Encryption	None					
Auth-Protocol by Password	MD5	Password	(8-16 chars)			
Priv-Protocol by Password	None	Password	(8-16 chars)			
Auth-Protocol by Key	MD5	Key (32 ch	nars)			
Priv-Protocol by Key	None	Key (32 ch	nars)			
IP Access-List Name	32 chars					
* Mandatory Field						Add
Total Entries: 1						
User Name Group Name	Security Model	Authentication Protocol	Privacy Protocol	Engine ID	IP Access-List Name	
initial initial	∨3	None	None	800000ab03		Delete

Figure 4-12 SNMP User Table Settings Window

The fields that can be configured are described below:

Parameter	Description
User Name	Enter an alphanumeric string of up to 32 characters. This is used to identify the SNMP users.

Parameter	Description
Group Name	Enter the SNMP group name to which the user belongs. The syntax is general string that does not allow spaces.
SNMP Version	Select the SNMP version. Options to choose from are v1, v2c, and v3.
SNMP V3 Encryption	After selecting <b>v3</b> in the <b>SNMP Version</b> drop-down list, this option is available. Options to choose from are <b>None</b> , <b>Password</b> , and <b>Key</b> .
Auth-Protocol	After selecting <b>v3</b> in the <b>SNMP Version</b> drop-down list, and selecting either <b>Password</b> or <b>Key</b> in the SNMP V3 Encryption drop-down list, this option is available. Select the authentication level. Options to choose from are:
	<ul> <li>MD5 - Select to use the HMAC-MD5-96 authentication level. This field will require the user to enter a password or a key.</li> <li>SHA - Specify that the HMAC-SHA authentication protocol will be used. This field will require the user to enter a password or a key.</li> </ul>
Priv-Protocol	After selecting v3 in the SNMP Version drop-down list, and selecting either <b>Password</b> or <b>Key</b> in the SNMP V3 Encryption drop-down list, this option is available. Select the private protocol. Options to choose from are:
	<ul> <li>None - Specify that no authorization protocol is in use.</li> <li>DES56 - Specify that DES 56-bit encryption is in use, based on the CBC-DES (DES-56) standard. This field will require the user to enter a password or a key.</li> </ul>
IP Access-List Name	Enter the standard IP access control list (ACL) to associate with the user.

Click the **Add** button to add a new entry based on the information entered.

Click the **Delete** button to remove the specified entry.

## **SNMP Host Table Settings**

This window is used to configure and display the recipient of the SNMP notification.

To view the following window, click Management > SNMP > SNMP Host Table Settings, a	is shown
below:	

SNMP Host Table Settings			
SNMP Host Settings			
Host IPv4 Address			
O Host IPv6 Address			
User-based Security Model	SNMPv1		
Security Level	NoAuthNoPriv 🗸

Total Entries: 1			
Host IP Address SNM	P Version UDP Po	t Community String / SNMPv3 User Name	
10.90.90.20	V1 162	public	Delete

Figure 4-13 SNMP Host Table Settings

The fields that can be configured are described below:

Parameter	Description
Host IPv4 Address	Enter the IPv4 address of the SNMP notification host.
Host IPv6 Address	Enter the IPv6 address of the SNMP notification host.
User-based Security Model	<ul> <li>Select the security model here. Options to choose from are:</li> <li>SNMPv1 - Select to allow the group user to use the SNMPv1 security model.</li> <li>SNMPv2c - Select to allow the group user to use the SNMPv2c security model.</li> <li>SNMPv3 - Select to allow the group user to use the SNMPv3 security model.</li> </ul>
Security Level	<ul> <li>When selecting SNMPv3 in the User-based Security Model drop- down list, this option is available.</li> <li>NoAuthNoPriv - Specify that there will be no authorization and no encryption of packets sent between the Switch and a remote SNMP manager.</li> <li>AuthNoPriv - Specify that authorization will be required, but there will be no encryption of packets sent between the Switch and a remote SNMP manager.</li> <li>AuthPriv - Specify that authorization will be required, and that packets sent between the Switch and a remote SNMP manger will be encrypted.</li> </ul>
UDP Port	Enter the UDP port number. The default UDP port number of the trap is 162. The range of UDP port numbers is from 1 to 65535. Some port numbers may conflict with other protocols.
Community String / SNMPv3 User Name	Enter the community string to be sent with the notification packet.

Click the **Add** button to add a new entry based on the information entered.

Click the **Delete** button to remove the specified entry.

## RMON

#### **RMON Global Settings**

This window is used to enable or disable remote monitoring (RMON) for the rising and falling alarm trap feature for the SNMP function on the Switch.

To view the following window, click **Management > RMON > RMON Global Settings**, as shown below:

RMON Global Settings	_		
RMON Global Settings			
RMON Rising Alarm Trap	Enabled	Disabled	
RMON Falling Alarm Trap	Enabled	Disabled	Apply

Figure 4-14 RMON Global Settings Window

The fields that can be configured are described below:

Parameter	Description
RMON Rising Alarm Trap	Select this option to enable or disable the RMON Rising Alarm Trap Feature.

Parameter	Description
RMON Falling Alarm Trap	Select this option to enable or disable the RMON Falling Alarm Trap Feature.

Click the Apply button to accept the changes made.

## **RMON Statistics Settings**

This window is used to configure and display the RMON statistics on the specified port.

To view the following window, click **Management > RMON > RMON Statistics Settings**, as shown below:

RMON Statistics	s Settings		
RMON Statistics Set	ttings		
Unit * Port *		Index (1-65535) *	Owner
1 • eth1/	0/1 💌		127 chars Add
Index	Port	Owner	
2	eth1/0/1	RMON	Delete Show Detail

Figure 4-15 RMON Statistics Settings Window

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
Port	Select to choose the port.
Index	Enter the RMON table index. The value is from 1 to 65535
Owner	Enter the owner string. The string can be up to 127 characters.

The fields that can be configured are described below:

Click the **Add** button to add a new entry based on the information entered.

Click the **Delete** button to remove the specified entry.

Click the Show Detail button to see the detail information of the specific port.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

After clicking the Show Detail button, the following window will appear.

Figure 4-19 RMON Alarm Settings Window

The fields that can be configured are described below:

Parameter	Description
Index	Enter the alarm index. The range is from 1 to 65535.
Interval	Enter the interval in seconds for the sampling of the variable and checking against the threshold. The valid range is from 1 to 2147483647 seconds.
Variable	Enter the object identifier of the variable to be sampled.
Туре	Select the monitoring type. Options to choose from are <b>Absolute</b> and <b>Delta</b> .
Rising Threshold	Enter the rising threshold value between 0 and 2147483647.
Falling Threshold	Enter the falling threshold value between 0 and 2147483647.
Rising Event Number	Enter the index of the event entry that is used to notify the rising threshold-crossing event. The valid range is from 1 to 65535. If not specified, no action is taken while crossing the ringing threshold.
Falling Event Number	Enter the index of the event entry that is used to notify the falling threshold-crossing event. The valid range is from 1 to 65535. If not specified, no action is taken while crossing the falling threshold.
Owner	Enter the owner string up to 127 characters.

Click the Add button to add a new entry based on the information entered.

Click the **Delete** button to remove the specified entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **RMON Event Settings**

This window is used to configure and display event entries.

To view the following window, click **Management > RMON > RMON Event Settings**, as shown below:

RMON Ev	ent Settings	_	_	_

Figure 4-20 RMON Event Settings Window

The fields that can be configured are described below:

Parameter	Description	
Index	Enter the index of the alarm entry between 1 and 65535.	
Description	Enter a description for the RMON event entry. The string is up to 127 characters long.	
Туре	Select the RMON event entry type. Options to choose from are <b>None, Log, Trap</b> , and <b>Log and Trap</b> .	
Community	Enter the community string. The string can be up to 127 characters.	
Owner	Enter the owner string. The string can be up to 127 characters.	

Click the **Add** button to add a new entry based on the information entered.

Click the **Delete** button to remove the specified entry.

Click the View Logs button to see the detail information of the specific port.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

After clicking the **View Logs** button, the following window will appear.

Event Logs Table			
Event Index: 1			
Total Entries: 0			
Log Index	Log Time	Log Description	
			Back

Figure 4-21 Event Logs Table Window

Click the **Back** button to return to the previous window.

## **Telnet/Web**

This window is used to configure Telnet and Web settings on the Switch.

To view the following window, click **Management > Telnet/Web**, as shown below:

Telnet/Web		
Telnet Settings		
Telnet State	Enabled	
Port (1-65535)	23	Apply
Web Settings		
Web State	enabled Disabled	
Port (1-65535)	80	Apply

Figure 4-22 Telnet/Web Window

The fields that can be configured for **Telnet Settings** are described below:

Parameter	Description	
Telnet State	Select this option to enable or disable the configuration through Telnet.	
Port	Enter the TCP port number used for Telnet management of the Switch. The default TCP port for the Telnet protocol is 23.	

Click the **Apply** button to accept the changes made.

The fields that can be configured for **Web Setting** are described below:

Parameter	Description	
Web State	Select this option to enable or disable the configuration through the web.	
Port	Enter the TCP port number used for Web-based management of the Switch. The "well-known" TCP port for the Web-based protocol is 80.	

Click the **Apply** button to accept the changes made.

## **Session Timeout**

This window is used to display and configure the session timeout settings. The outgoing session timeout values are used for Console/Telnet/SSH connections through the CLI of the Switch to the Telnet interface of another switch.

To view the following window, click **Management > Session Timeout**, as shown below:

Session Timeout			
Session Timeout			
Web Session Timeout (60-36000)	180 sec 🗸 Defaul	t	
Console Session Timeout (0-1439)	3 min 🔽 Defaul	t	
Outgoing Console Session Timeout (0-1439)	0 min 🔽 Defaul	t	
Telnet Session Timeout (0-1439)	3 min 🗸 Defaul	t	
Outgoing Telnet Session Timeout (0-1439)	0 min 🔽 Defaul	t	
SSH Session Timeout (0-1439)	3 min 🗸 Defaul	t	
Outgoing SSH Session Timeout (0-1439)	0 min 🖌 Defaul	t [	Apply

The fields that can be configured are described below:

Parameter	Description	
Web Session Timeout	Enter the web session timeout value here. The range is from 60 to 36000 seconds. The default value is 180 seconds. Select the <b>Default</b> option to use the default value.	
Console Session Timeout	Enter the console session timeout value here. The range is from 0 to 1439 minutes. Enter 0 to disable the timeout. The default value is 3 minutes. Select the <b>Default</b> option to use the default value.	
Outgoing Console Session Timeout	Enter the outgoing console session timeout value here. The range is from 0 to 1439 minutes. Enter 0 to disable the timeout. The default value is 0. Select the <b>Default</b> option to use the default value.	
Telnet Session Timeout	Enter the Telnet session timeout value here. The range is from 0 to 1439 minutes. Enter 0 to disable the timeout. The default value is 3 minutes. Select the <b>Default</b> option to use the default value.	
Outgoing Telnet Session Timeout	Enter the outgoing Telnet session timeout value here. The range is from 0 to 1439 minutes. Enter 0 to disable the timeout. The default value is 0. Select the <b>Default</b> option to use the default value.	
SSH Session Timeout	Enter the SSH session timeout value here. The range is from 0 to 1439 minutes. Enter 0 to disable the timeout. The default value is 3 minutes. Select the <b>Default</b> option to use the default value.	
Outgoing SSH Session Timeout	Enter the outgoing SSH session timeout value here. The range is from 0 to 1439 minutes. Enter 0 to disable the timeout. The default value is 0. Select the <b>Default</b> option to use the default value.	

Click the **Apply** button to accept the changes made.

# DHCP

## **Service DHCP**

This window is used to configure the DHCP relay service on the Switch.

To view the following window, click **Management > DHCP > Service DHCP**, as shown below:

Service DHCP		
Service DHCP		
Service DHCP State	Disabled	Apply
Service IPv6 DHCP		
Service IPv6 DHCP State	Disabled	Apply

Figure 4-24 Service DHCP Window

The fields that can be configured for Service DHCP are described below:

Parameter	Description	
Service DHCP State	Select this option to enable or disable the DHCP relay service.	

Click the **Apply** button to accept the changes made.

The fields that can be configured for Service IPv6 DHCP are described below:

Parameter	Description	
Service IPv6 DHCP State	Select this option to enable or disable the IPv6 DHCP relay service.	

Click the **Apply** button to accept the changes made.

### **DHCP Class Settings**

This window is used to configure and display the DHCP class and the DHCP option matching pattern for the DCHP class.

To view the following window, click **Management > DHCP > Service DHCP**, as shown below:

DHCP Class Settings		
DHCP Class State		
DHCP Use Class State	Disabled 🔽	Apply
DHCP Class Settings		
Class Name	32 chars	Apply
Total Entries: 1		
Class M	lame	
Clas	is	Edit Delete
		1/1 K < 1 > > Go

The fields that can be configured for DHCP Class State are described below:

Parameter	Description	
DHCP Use Class State	Select to enable or disable the DHCP class function here.	

Click the **Apply** button to accept the changes made.

The fields that can be configured for **DHCP Class Settings** are described below:

Parameter	Description
Class Name	Enter the DHCP class name with a maximum of 32 characters.

Click the **Apply** button to accept the changes made.

Click the **Edit** button to modify the DHCP option-matching pattern for the corresponding DCHP class.

Click the **Delete** button to remove the specified entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

After clicking the Edit button, the following window will appear.

ICP Class Option Settings —			
lass Name	DHCPClass		
ption (1-254)			
lex		*	
Bitmask			Apply
otal Entries: 1			
Option	Hex	Bitmask	
60	102030		Delete

The fields that can be configured are described below:

Parameter	Description		
Option	Enter the DHCP option number. The range is from 1 to 254.		
Hex	Enter the hex pattern of the specified DHCP option. Tick the check box not to match the remaining bits of the option.		
Bitmask	Enter the hex bit mask for masking of the pattern. The masked pattern bits will be matched. If not specified, all bits entered in <b>Hex</b> will be checked.		

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

Click the **Back** button to return to the previous window.

#### **DHCP Server**

The Dynamic Host Configuration Protocol (DHCP) allows the Switch to designate IP addresses, subnet masks, default gateways and other IP parameters to devices that request this information. This occurs when a DHCP enabled device is booted on or attached to the locally attached network. This device is known as the DHCP client and when enabled, it will emit query messages on the network before any IP parameters are set. When the DHCP server receives this request, it will allocate an IP address to the client. The DHCP client may be then utilize the IP address allocated by the DHCP server as its local configuration.

The user can configure many DHCP related parameters that it will utilize on its locally attached network, to control and limit the IP settings of clients desiring an automatic IP configuration, such as the lease time of the allocated IP address, the range of IP addresses that will be allowed in its DHCP pool, the ability to exclude various IP addresses within the range so as not to make identical entries

on its network, or to assign the IP address of an important device (such as a DNS server or the IP address of the default route) to another device on the network.

Users also have the ability to bind IP addresses within the DHCP pool to specific MAC addresses in order to assign the same IP addresses to important devices.

#### **DHCP Server Global Settings**

This window is used to display and configure the global DHCP server parameters.

#### To view the following window, click **Management > DHCP > DHCP Server > DHCP Server Global Settings**, as shown below:

DHCP Server Global Settings		
DHCP Use Class State		
DHCP Use Class State	○ Enabled	Apply
DHCP Server Settings		
DHCP Ping Packet (0-10)	2	
DHCP Ping Timeout (100-10000)	500 ms	Apply

The fields that can be configured in **DHCP Use Class State** are described below:

Parameter	Description
DHCP Use Class State	Select to enable or disable the DHCP Use Class State here. When enabled, the DHCP server will use DHCP classes for address allocation.

Click the **Apply** button to accept the changes made.

The fields that can be configured in DHCP Server Settings are described below:

Parameter	Description		
DHCP Ping Packet	Enter the number of ping packets that the Switch will send out on the network containing the IP address to be allotted. If the ping request is not returned, the IP address is considered unique to the local network and then allotted to the requesting client. A value of 0 means there is no ping test. The range is from 0 to 10. The default value is 2.		
DHCP Ping Timeout	Enter the amount of time the DHCP server must wait before tim out a ping packet. The range is from 100 to 10000 milliseconds The default value is 500 milliseconds.		

Click the **Apply** button to accept the changes made.

#### **DHCP Server Pool Settings**

This window is used to display and configure the DHCP server pool settings.

#### To view the following window, click **Management > DHCP > DHCP Server > DHCP Server Pool Settings**, as shown below:

The fields that can be configured are described below:

Parameter	Description
Option	Enter the DHCP option number here. The range is from 1 to 254.
Туре	<ul> <li>Select the DHCP option type here. Options to choose from are:</li> <li>ASCII - Enter the ASCII string in the space provided. This string can be up to 255 characters long.</li> <li>Hex - Enter the hexadecimal string in the space provided. This string can be up to 254 characters long. Select the None option to specify a zero-length hexadecimal string.</li> <li>IP - Enter the IPv4 address(es) in the space(s) provided. Up to 8 IPv4 addresses can be entered.</li> </ul>

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

Click the **Back** button to return to the previous window.

After clicking the **Configure** button, the following page will appear.

DHCP Server Pool Config	ure
DHCP Server Pool Configure	
Pool Name	pool
Boot File	64 chars
Domain Name	64 chars
Network (IP/Mask)	0 - 0 - 0 - 0 - 0
Next Server	0 - 0 - 0 - 0
Default Router	
DNS Server	
NetBIOS Name Server	
NetBIOS Node Type	Please Select V
Lease	1 Days (0-365) 00 V Hours 00 V Minutes Infinite Back Apply

Figure 4-31 DHCP Server Pool Configure Window

The fields that can be configured are described below:

Parameter	Description		
Boot File	Enter the boot file name here. This can be up to 64 characters long.		
Domain Name	Enter the domain name for the DHCP client here. This can be up to 64 characters long.		
Network (IP/Mask)	Enter the network IPv4 address and subnet mask for the DHCP client here.		
Next Server	Enter the next server IPv4 address here. The boot image file is stored on this server and can be retrieved by DHCP clients using this IP address. The server is typically a TFTP server. Only one next server IP address can be specified.		
Default Router	Enter the IPv4 address of the default router for the DHCP client here. Up to 8 IPv4 addresses can be entered here. The IP address of the router should be on the same subnet as the client's subnet. Routers are listed in the order of preference. If default routers are already configured, the default routers configured later will be added to the default interface list.		
DNS Server	Enter the IPv4 address to be used by the DHCP client as the DNS server here. Up to 8 IPv4 addresses can be entered here. Servers are listed in the order of preference. If DNS servers are already configured, the DNS servers configured later will be added to the DNS server list.		
NetBIOS Name Server	Enter the WINS name server IPv4 address for the DHCP client here. Up to 8 IPv4 addresses can be entered here. Servers are listed in the order of preference. If name servers are already configured, the name server configured later will be added to the default interface list.		
NetBIOS Node Type	<ul> <li>Select the NetBIOS node type for Microsoft DHCP clients here. The node type determines the method that NetBIOS uses to register and resolve names.</li> <li>Options to choose from are: <ul> <li>Broadcast - This system uses broadcasts.</li> <li>Peer To Peer - This system (p-node) uses only point-to-point name queries to a name server (WINS).</li> <li>Mixed - This system (m-node) broadcasts first, and then queries the name server.</li> <li>Hybrid - This system (h-node) queries the name server first, and then broadcasts. This is the recommended type.</li> </ul> </li> </ul>		
Lease	Enter and select the lease time for an IPv4 address that is assigned from the address pool here. Enter the <b>Days</b> in the range from 0 to 365. Select the <b>Hours</b> and <b>Minutes</b> from the drop-down menus. Alternatively, the <b>Infinite</b> option can be selected to specify that the lease time is unlimited.		

Click the **Apply** button to accept the changes made.

Click the **Back** button to return to the previous window.

#### **DHCP Server Exclude Address**

This window is used to view and exclude a range of IPv4 addresses from being allocated to the DHCP client. The DHCP server automatically allocates addresses in DHCP address pools to DHCP clients. All the addresses except the interface's IP address on the router and the excluded address(es) specified here are available for allocation. Multiple ranges of addresses can be excluded. To remove

a range of excluded addresses, administrators must specify the exact range of addresses previously configured.

To view the following window, click **Management > DHCP > DHCP Server > DHCP Server Exclude Address**, as shown below:

DHCP Server Exclude Address			
DHCP Server Exclude Address			
Begin Address     · · ·       End Address     · · ·       Apply			
Total Entries: 1			
Begin Address	End Address		
192.168.70.2	192.168.70.100	Delete	
132.100.10.2	132, 100, 10, 2 132, 100, 10, 100 Delete		

Figure 4-32 DHCP Server Exclude Address Window

The fields that can be configured are described below:

Parameter	Description
Begin Address	Enter the first IPv4 address of a range of addresses to be excluded here.
End Address	Enter the last IPv4 address of a range of addresses to be excluded here.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

#### **DHCP Server Manual Binding**

This window is used to display and configure the DHCP server manual binding settings. With a manual binding entry, the IP address can be bound with a client-identifier or bound with the hardware address of the host.

To view the following window, click **Management > DHCP > DHCP Server > DHCP Server Manual Binding**, as shown below:

HCP Server Manual E					
Pool Name Host	32 chars		· ·		
Hardware Address     Client Identifier	C2-F3-22-0A-12-I	F4			Apply
Pool Name	Host	Mask	Hardware Address	Client Identifier	
pool	192.168.70.220	255.255.255.0	00-11-22-33-44-55	-	Delete

Figure 4-33 DHCP Server Manual Binding Window

Parameter	Description
Pool Name	Enter the DHCP server pool name here. This name can be up to 32 characters long.
Host	Enter the DHCP host IPv4 address here.
Mask	Enter the DHCP host network subnet mask here.
Hardware Address	Enter the DHCP host MAC address here.

The fields that can be configured are described below:

Parameter	Description	
Client Identifier	Enter the DHCP host identifier in hexadecimal notation here. The client identifier is formatted by the media type and the MAC address.	

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

### **DHCP Server Dynamic Binding**

This window is used to view and clear the DHCP server dynamic binding entries.

To view the following window, click **Management > DHCP > DHCP Server > DHCP Server Dynamic Binding**, as shown below:

DHCP Server Dynamic Binding				
DHCP Server Dynamic Binding				
	]		Find	
32 chars	I I All			
	]		Clear	
Total Entries: 0				
	Client-ID/Hardware Address	Lease Expiration	Туре	
	ng 32 chars	ng 32 chars  All 	ng 32 chars  All 	

#### Figure 4-34 DHCP Server Dynamic Binding Window

The fields that can be configured are described below:

Parameter	Description	
IP Address	Enter the binding entry IPv4 address here.	
Pool Name	Enter the DHCP server pool name here. This name can be up to 32 characters long. Select the <b>All</b> option to clear the binding entries for all pools.	

Click the Find button to locate a specific entry based on the information entered.

Click the **Clear** button to clear the entries based on the information specified.

### **DHCP Server IP Conflict**

This window is used to view and clear the DHCP conflict entries from the DHCP server database.

To view the following window, click **Management > DHCP > DHCP Server > DHCP Server IP Conflict**, as shown below:

DHCP Server IP Conflic	t		
IP Address			Find
Pool Name IP Address	32 chars	I All	Clear
Total Entries: 0			Clear
IP Address		Detection Method	Detection Time

Figure 4-35 DHCP Server IP Conflict Window

The fields that can be configured are described below:

Parameter	Description
IP Address	Enter the IPv4 address of the conflict entry to be located or cleared.
Pool Name	Enter the DHCP server pool name here. This name can be up to 32 characters long. Select the <b>All</b> option to clear the conflict entries for all pools.

Click the **Find** button to locate a specific entry based on the information entered.

Click the **Clear** button to clear the entries based on the information specified.

### **DHCP Server Statistic**

This window is used to display DHCP server statistics.

To view the following window, click **Management > DHCP > DHCP Server > DHCP Server Statistic**, as shown below:

DHCP Server Statistics		
		Clear
	DHCP Server Statistics

Client DUID	28 chars	IAID		]	
Valid Lifetime (60-4294967295)	2592000 sec	Preferred Lifetime (60-4294967295)	604800	sec	Apply
Total Entries: 0					

Figure 4-38 DHCPv6 Server Pool Configure Window

The fields that can be configured in DHCPv6 Server Pool Configure are described below:

Parameter	Description	
Address Prefix	Select and enter the DHCPv6 server pool IPv6 network address and prefix length here. For example, 2015::0/64.	
Prefix Delegation Pool	Select and enter the DHCPv6 server pool prefix delegation name here. This name can be up to 12 characters long.	
Valid Lifetime	Enter the valid lifetime value here. The range is from 60 to 4294967295 seconds. The valid lifetime should be greater than preferred lifetime. If this value is not specified, then the default valid lifetime will be 2592000 seconds (30 days).	
Preferred Lifetime	Enter the preferred lifetime value here. The range is from 60 to 4294967295 seconds. If this value is not specified, the preferred lifetime will be 604800 seconds (7 days).	
DNS Server	Enter the DNS server IPv6 address to be assigned to requesting DHCPv6 clients here.	
Domain Name	Enter the domain name to be assigned to requesting DHCPv6 clients here.	

Click the **Apply** button to accept the changes made.

Click the **Back** button to return to the previous window.

The fields that can be configured in **Static Bindings** are described below:

Parameter	Description
Static Bindings Address	Enter the static binding IPv6 address assign to the specific client here.
Static Bindings Prefix	Enter the static binding IPv6 network address and prefix length here.
Client DUID	Enter the client DHCP Unique Identifier (DUID) here. This string can be up to 28 characters long.
IAID	Enter the Identity Association Identifier (IAID) here. The IAID here uniquely identifies a collection of non-temporary addresses (IANA) assigned on the client.
Valid Lifetime	Enter the valid lifetime value here. The valid lifetime should be greater than the preferred lifetime. The range is from 60 to 4294967295 seconds. By default, this value is 2592000 seconds (30 days).
Preferred Lifetime	Enter the preferred lifetime value here. The range is from 60 to 4294967295 seconds. By default, this value is 604800 seconds (7 days).

Click the **Apply** button to accept the changes made.

### **DHCPv6 Server Local Pool Settings**

This window is used to display and configure the DHCPv6 server local pool settings.

# To view the following window, click **Management > DHCP > DHCPv6 Server > DHCPv6 Server Local Pool Settings**, as shown below:

DHCPv6 Server Loca	I Pool Setting	S	_	_	
DHCPv6 Server Local Pool					
Pool Name IPv6 Address/Prefix Length		2 chars 001:AAB8::/64			
Assigned Length					Apply
Pool Name	[1	2 chars			Find
Total Entries: 1					
Pool Name	Prefix	Assigned Length	Free	In Use	
Pool	2020::/64	64	1	0	User Detail Delete
					1/1 < 1 > > Go

The fields that can be configured are described below:

Parameter	Description		
Pool Name	Enter the DHCPv6 server pool name here. This name can be up to 12 characters long.		
IPv6 Address / Prefix Length	Enter the IPv6 prefix address and prefix length of the local pool here.		
Assigned Length	Enter the prefix length to be delegated to the user from the pool here. The value of the assigned length cannot be less than the value of the prefix length.		

Click the **Apply** button to accept the changes made.

Click the Find button to locate a specific entry based on the information entered.

Click the **User Detail** button to view the user information displayed in the lower table.

Click the **Delete** button to remove the specified entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **DHCPv6 Server Exclude Address**

This window is used to specify IPv6 addresses that a DHCPv6 server should not assign to DHCPv6 clients. The DHCPv6 server assumes that all addresses (excluding the Switch's IPv6 address) can be

assigned to clients. Use this window to exclude a single IPv6 address or a range of IPv6 addresses. The excluded addresses are only applied to the pool(s) for address assignment.

To view the following window, click **Management > DHCP > DHCPv6 Server > DHCPv6 Server Exclude Address**, as shown below:

DHCPv6 Server E	xclude Address		
DHCPv6 Server Exclue	le Address		
Low IPv6 Address High IPv6 Address	2013::1 2013::1		Apply
Total Entries: 1			
Range	Low IPv6 Address	High IPv6 Address	
1	2020:::100	2020::120	Delete

#### Figure 4-40 DHCPv6 Server Exclude Address Window

The fields that can be configured are described below:

Parameter	Description
Low IPv6 Address	Enter the excluded IPv6 address or first IPv6 address in the excluded address range here.
High IPv6 Address	Enter the last IPv6 address in the excluded address range here (optional).

Click the Apply button to accept the changes made.

Click the **Delete** button to remove the specified entry.

### **DHCPv6 Server Binding**

This window is used to view and clear the DHCPv6 server binding entries.

To view the following window, click **Management > DHCP > DHCPv6 Server > DHCPv6 Server Binding**, as shown below:

E.	HCPv6 Server Binding			
Г	DHCPv6 Server Binding			
	IPv6 Address 20	113::1 🗌 All		Find Clear
	Total Entries: 0			
	Client DUID	IPv6 Address	Preferred Lifetime	Valid Lifetime

The fields that can be configured are described below:

Parameter	Description	
IPv6 Address	Enter the binding entry IPv6 address to be displayed or cleared here. Select the <b>All</b> option to display or clear all DHCPv6 client prefix bindings in or from the binding table.	

Click the **Find** button to locate a specific entry based on the information entered.

Click the **Clear** button to clear the entries based on the information specified.

### **DHCPv6 Server Interface Settings**

This window is used to display and configure the DHCPv6 server interface settings.

# To view the following window, click **Management > DHCP > DHCPv6 Server > DHCPv6 Server Interface Settings**, as shown below:

HCPv6 Server Interfac	e Settings		_

#### Figure 4-49 DHCP Relay Pool Class Edit Settings Window

The fields that can be configured are described below:

Parameter	Description
Relay Target	Enter the DHCP relay target for relaying packets that matches the value pattern of the option defined in the DHCP class.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

Click the **Back** button to return to the previous window.

### **DHCP Relay Information Settings**

This window is used to configure and display the DHCP relay information.

#### To view the following window, click **Management > DHCP > DHCP Relay > DHCP Relay Information Settings**, as shown below:

DHCP Relay Informa	tion Settings				
DHCP Relay Information G	lobal				
Information Trust All	Disabled	Information Che	ck Disabled 💌		
Information Policy	Replace	Information Option	on Disabled 💌		Apply
DHCP Relay Information –					
Total Entries: 1					
Interface	Trusted	Check Relay	Policy	Option Insert	
vlan1	Disabled	Not Configured	Not Configured	Not Configured	Edit
				1/1  < < 1	> >  Go

The fields that can be configured are described below:

Parameter	Description	
Information Trust All	Select this option to enable or disable the DHCP relay agent to trust the IP DHCP relay information for all interfaces.	
Information Check	Select this option to enable or disable the DHCP relay agent to validate and remove the relay agent information option in the received DHCP reply packet.	
Information Policy	Select the Option 82 re-forwarding policy for the DHCP relay agent. Options to choose from are:	
	<ul> <li>Keep - Select to discard the packet that already has the relay option.</li> <li>Drop - Select that the DHCP request packet that already has the relay option is left unchanged and directly relayed to the DHCP server.</li> <li>Replace - Select that the DHCP request packet that already has the relay option will be replaced by a new option.</li> </ul>	
Information Option	Select this option to enable or disable the insertion of relay agent information (Option 82) during the relay of DHCP request packets.	

Click the **Apply** button to accept the changes made.

Click the **Edit** button to modify the corresponding interface.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **DHCP Relay Information Option Format Settings**

This window is used to configure and display the DHCP information format.

#### To view the following window, click **Management > DHCP > DHCP Relay > DHCP Relay Information Option Format Settings**, as shown below:

Profile Name	Format String
Profile	Edit Delete
	1/1 < < 1 > > Go

Figure 4-52 DHCP Relay Information Profile Settings Window

Parameter	Description			
Case	Select the case that will be used here. Options to choose from are			
	<ul> <li>Lowercase - Specifies that when using the lowercase format, the Option 82 MAC address for the user-defined profile will be formatted as: aa-bb-cc-dd-ee-ff.</li> <li>Uppercase - Specifies that when using the uppercase format, the Option 82 MAC address for the user-defined profile username will be formatted as: AA-BB-CC-DD-EE-FF.</li> </ul>			
Delimiter	Select the delimiter that will be used here. Options to choose from are:			
	Hyphen - Specifies that the format will be AA-BB-CC-DD-EE- FF.			
	<ul> <li>Colon - Specifies that the format will be AA:BB:CC:DD:EE:FF.</li> </ul>			
	<ul> <li>Dot - Specifies that the format will be AA.BB.CC.DD.EE.FF.</li> <li>None - Specifies that when not using any delimiter, the format will be AABBCCDDEEFF.</li> </ul>			

The fields that can be configured in **DHCP Relay Information Option MAC Format** are described below:

Parameter	Description
Delimiter Number	<ul> <li>Select the delimiter number here. Options to choose from are:</li> <li>1 - Single delimiter, the format is: AABBCC.DDEEFF.</li> <li>2 - Double delimiters, the format is: AABB.CCDD.EEFF.</li> <li>5 - Multiple delimiters, the format is: AA.BB.CC.DD.EE.FF.</li> </ul>

Click the **Apply** button to accept the changes made.

The fields that can be configured in DHCP Relay Information Profile Settings are described below:

Parameter	Description			
Profile Name	Enter the Option 82 profile name here. The profile can be used to define the flexible, user-defined Option 82 entry.			
	<ul> <li>Enter the Option 82 profile name here. The profile can be used to define the flexible, user-defined Option 82 entry.</li> <li>After clicking the Edit button, enter the user-defined DHCP Option 82 format string here. This string can be up to 251 characters long. The following rules need to be considered: <ul> <li>This string can be a hexadecimal value, an ASCII string, or any combination of hexadecimal values and ASCII characters. An ASCII string needs to be enclosed with quotation marks ("") like "Ethernet". Any ASCII characters outside of the quotation marks will be interpreted as hexadecimal values.</li> <li>A formatted key string is a string that should be translated before being encapsulated in the packet. A formatted key string can be contained both ASCII strings and hexadecimal values. For example, "%" +"\$"+"1~32"+ "keyword"+ ":":</li> <li>% - Indicates that the string that follows this character is a formatted key string.</li> <li>"\$" or "0" - (Optional) Indicates a fill indicator. This option specifies how to fill the leading space (0x20).</li> <li>"0" - Indicates to fill the leading space (0x20).</li> <li>"0" - Indicates to fill the leading 0. The fill the leading 0 (0) is the default setting.</li> </ul> </li> </ul>			
	<ul> <li>key string should occupy. If the actual length of the translated key string is less than the length specified by this option, a fill indicator will be used to fill it. Otherwise, this length option and fill indicator will be ignored and the actual string will be used directly.</li> <li>keyword - Indicates that the keyword will be translated based on the actual value of the system. The following keyword definitions specifies that a command will be refused if an unknown or unsupported keyword is detected:</li> </ul>			
	<ul> <li>devtype - The model name of the device. Only an ASCII string is allowed.</li> </ul>			
	<ul> <li>sysname - Indicates the System name of the Switch. Only an ASCII string is allowed.</li> <li>ifdescr - Derived from <i>ifDescr</i> (IF-MIB). Only an</li> </ul>			
	ASCII string is allowed.			
	<ul> <li>portmac - Indicates the MAC address of a port. This can be either an ASCII string or a hexadecimal value. When in the format of an ASCII string, the MAC address format can be customized using special CLI commands. When in the format of a hexadecimal value, the MAC</li> </ul>			

Parameter	Description
	address will be encapsulated in order in hexadecimal.
	<ul> <li>sysmac - Indicates the system MAC address. This can be either an ASCII string or a hexadecimal value. In the ASCII string format, the MAC address format can be customized using special CLI commands. In the hexadecimal format, the MAC address will be encapsulated in order in hexadecimal.</li> </ul>
	<ul> <li>unit - Indicates the unit ID. This can be either an ASCII string or a hexadecimal value. For a standalone device, the unit ID is 0.</li> </ul>
	<ul> <li>module - Indicates the module ID number. This can be either an ASCII string or a hexadecimal value.</li> </ul>
	<ul> <li>port - Indicates the local port number. This can be either an ASCII string or a hexadecimal value.</li> </ul>
	<ul> <li>svlan - Indicates the outer VLAN ID. This can be either an ASCII string or a hexadecimal value.</li> </ul>
	<ul> <li>cvlan - Indicates the inner VLAN ID. This can be either an ASCII string or a hexadecimal value.</li> </ul>
	<ul> <li>: - Indicates the end of the formatted key sting. If a formatted key string is the last parameter of the command, its ending character (":") can be ignored. The space (0x20) between "%" and ":" will be ignored. Other spaces will be encapsulated.</li> </ul>
	<ul> <li>ASCII strings can be any combination of formatted key strings and 0~9, a~z, A~Z, !@#\$%^&amp;*()_+ -=\[]{};:"'/?.,&lt;&gt;`, and space characters. "\" is the escape character. The special character after "\" is the character itself, for example, "\%" is "%" itself, not the start indicator of a formatted key string. Spaces not in the formatted key string will also be encapsulated.</li> <li>Hexadecimal values can be any combination of formatted key strings and 0~9, A~F, a~f, and space characters. The formatted key strings only support keywords that support hexadecimal values. Spaces not in the formatted key string will be ignored.</li> </ul>

Click the **Apply** button to accept the changes made.

Click the **Find** button to locate a specific entry based on the information entered.

Click the **Edit** button to re-configure the specific entry.

Click the **Delete** button to delete the specified entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **DHCP Local Relay VLAN**

This window is used to configure local relay on a VLAN or a group of VLANs.

To view the following window, click **Management > DHCP > DHCP Relay > DHCP Local Relay VLAN**, as shown below:

DHCP Local Relay VLAN					
DHCP Local Relay VLAN Settings					
DHCP Local Relay VID List DHCP Local Relay VID List	1,3-5 1	All VLANs	State	Disabled	Apply

Figure 4-53 DHCP Local Relay VLAN Window

The fields that can be configured are described below:

Parameter	Description
DHCP Local Relay VID List	Enter the VLAN ID for DHCP local relay. Tick the <b>All VLANs</b> check box to select all VLANs.
State	Select this option to enable or disable the DHCP local relay on the specific VLAN(s).

Click the **Apply** button to accept the changes made.

# **DHCPv6 Relay**

### **DHCPv6 Relay Global Settings**

This window is used to configure the DHCPv6 relay remote ID.

To view the following window, click **Management > DHCP > DHCPv6 Relay > DHCPv6 Relay Global Settings**, as shown below:

DHCPv6 Relay Global Settings		
DHCPv6 Relay Global Settings		
IPv6 DHCP Relay Remote ID Format	Default	
IPv6 DHCP Relay Remote ID UDF	ASCII 128 chars	
IPv6 DHCP Relay Remote ID Policy	Кеер	
IPv6 DHCP Relay Remote ID Option	Disabled  Apply	

The fields that can be configured are described below:

Parameter	Description		
IPv6 DHCP Relay Remote ID Format	Select to choose the sub-type of the remote ID. Options to choose from are <b>Default</b> , <b>CID With User Define</b> , and <b>User Define</b> .		
IPv6 DHCP Relay Remote ID UDF	<ul> <li>Select to choose the User Define Field (UDF) for remote ID.</li> <li>Options to choose from are:</li> <li>ASCII - Select to enter the ASCII string with a maximum of 128 characters in the text box.</li> </ul>		
	<ul> <li>HEX - Select to enter the hexadecimal string with a maximum of 256 characters in the text box.</li> </ul>		
IPv6 DHCP Relay Remote ID Policy	Select to choose Option 37 forwarding policy for the DHCPv6 relay agent. Options to choose from are:		

Parameter	Description				
	<ul> <li>Keep - Select to discard the packet that already has the relay agent Remote-ID Option 37.</li> <li>Drop - Select that the DHCPv6 request packet that already has the relay agent Remote-ID option is left unchanged and directly relayed to the DHCPv6 server.</li> </ul>				
IPv6 DHCP Relay Remote ID Option	Select this option to enable or disable the insertion of the relay agent remote ID Option 37 during the relay of DHCP for IPv6 request packets.				

Click the **Apply** button to accept the changes made.

### **DHCPv6 Relay Interface Settings**

This window is used to configure and display the DHCPv6 relay interface settings.

To view the following window, click **Management > DHCP > DHCPv6 Relay > DHCPv6 Relay** Interface Settings, as shown below:

DHCPv6 Relay Interface Sett	tings		
DHCPv6 Relay Interface Settings			
Interface VLAN (1-4094)

Total Entries: 1			Ĩ
Interface	Destination IPv6 Address	Output Interface	
vlan1	2012::100	vlan2	Delete
		1/1  < <	1 > >] Go

Figure 4-55 DHCPv6 Relay Interface Settings Window

The fields that can be configured are described below:

Parameter	Description
Interface VLAN	Enter the VLAN from 1 to 4094 for DHCPv6 relay.
Destination IPv6 Address	Enter the DHCPv6 relay destination address.
Output Interface VLAN	Enter the output interface for the relay destination.

Click the **Apply** button to accept the changes made.

Click the **Find** button to locate a specific entry based on the information entered.

Click the **Delete** button to remove the specified entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

# **DHCP** Auto Configuration

This window is used to configure the DHCP auto-configuration function.

To view the following window, click **Management > DHCP > DHCP Auto Configuration**, as shown below:

DHCP Auto Configurati	on		
DHCP Auto Configuration			
Auto Configuration State	Enabled	Disabled	Apply
Note: If autoconfig State enab	led, it won't take effect u	til reboot.	

Figure 4-56 DHCP Auto Configuration Window

The fields that can be configured are described below:

Parameter	Description
Auto Configuration State	Select this option to enable or disable the auto-configuration function.

Click the **Apply** button to accept the changes made.

# DNS

Computer users usually prefer to use text names for computers for which they may want to open a connection. Computers themselves, require 32-bit IP addresses. Somewhere, a database of network devices' text names and their corresponding IP addresses must be maintained.

The Domain Name System (DNS) is used to map names to IP addresses throughout the Internet and has been adapted for use within intranets. For two DNS servers to communicate across different subnets, the DNS Relay of the Switch must be used. The DNS servers are identified by IP addresses.

#### Mapping Domain Names to Addresses

Name-to-address translation is performed by a program called a Name server. The client program is called a Name resolver. A Name resolver may need to contact several Name servers to translate a name to an address.

The Domain Name System (DNS) servers are organized in a somewhat hierarchical fashion. A single server often holds names for a single network, which is connected to a root DNS server - usually maintained by an ISP.

#### **Domain Name Resolution**

The domain name system can be used by contacting the name servers one at a time, or by asking the domain name system to do the complete name translation. The client makes a query containing the name, the type of answer required, and a code specifying whether the domain name system should do the entire name translation, or simply return the address of the next DNS server if the server receiving the query cannot resolve the name.

When a DNS server receives a query, it checks to see if the name is in its sub domain. If it is, the server translates the name and appends the answer to the query, and sends it back to the client. If the DNS server cannot translate the name, it determines what type of name resolution the client requested. A complete translation is called recursive resolution. This requires the server to contact

other DNS servers until the name is resolved. Iterative resolution specifies that if the DNS server cannot supply an answer, it will return the address of the next DNS server the client contacted.

Each client must be able to contact at least one DNS server, and each DNS server must be able to contact at least one root server.

The address of the machine that supplies domain name service is often supplied by a DHCP or BOOTP server, or can be entered manually and configured into the operating system at startup.

# **DNS Global Settings**

This window is used to configure the DNS global settings.

To view the following window, click **Management > DNS > DNS Global Settings**, as shown below:

DNS Global Settings	
DNS Global Settings	
IP Domain Lookup IP Name Server Timeout (1-60)	Disabled 3 sec Apply

Figure 4-57 DNS Global Settings Window

The fields that can be configured are described below:

Parameter	Description
IP Domain Lookup	Select this option to enable or disable the DNS to carry out the domain name resolution.
IP Name Server Timeout	Enter the maximum time to wait for a response from a specified name server. This value is between 1 and 60 seconds.

Click the **Apply** button to accept the changes made.

# **DNS Name Server Settings**

This window is used to configure and display the IP address of a domain name server.

To view the following window, click **Management > DNS > DNS Name Server Settings**, as shown below:

DNS Name Server Settings		
DNS Name Server Settings		
Name Server IPv4	2 2 2	
Name Server IPv6	2233::1	Apply

To view the following window, click **Management > IP Source Interface**, as shown below:

IP Source Interface			
IP TFTP Source Interface			
Source Interface State	Disabled <b>T</b>		
Interface Type	VLAN T	VID (1-4094)	Apply

Figure 4-69 IP Source Interface Window

The fields that can be configured are described below:

Parameter	Description
Source Interface State	Select to <b>Enable</b> or <b>Disable</b> the source interface feature's global state here.
Interface Type	After enabling the <b>Source Interface State</b> option, select the interface type here. The only option available is <b>VLAN</b> .
VID (1-4094)	After selecting the <b>VLAN</b> as the <b>Interface Type</b> , enter the VLAN ID used here. This value must be between 1 and 4094.

Click the **Apply** button to accept the changes made.

# **File System**

#### Why use flash file system?

In old switch system, the firmware, configuration, and log information are saved in a flash with fixed addresses and size. This means that the maximum configuration file can only be 2Mb, and even if the current configuration is only 40Kb, it will still take up 2Mb of flash storage space. The configuration file number and firmware numbers are also fixed. A compatible issue will occur in the event that the configuration file or firmware size exceeds the originally designed size.

#### Flash File System (FFS) in our system:

The Flash File System is used to provide the user with flexible file operation on the Flash. All the firmware, configuration information, and system log information are stored in the Flash as files. This means that the Flash space taken up by all the files are not fixed, it is the real file size. If the Flash space is enough, the user could download more configuration files or firmware files and use commands to display Flash file information, rename file names, and delete it. Furthermore, the user can also configure the **boot up runtime image** or the **running configuration file** if needed.

File System				
Unit	1			
Path	C:			Go
Сору				
Drive	Media Type	Size (MB)	File System Type	Label

Figure 4-71 File System - Search for Drive Window

Click the **Previous** button to return to the previous window.

Click the Create Directory button to create a new directory within the file system of the Switch.

Click the **Copy** button to copy a specific file to the Switch.

Click the **Boot Up** button to set a specific runtime image as the boot up image.

Click the Rename button to rename a specific file's name.

Click the **Delete** button to remove a specific file from the file system.

Click the **Copy** button to see the following window.

File System	_	_			_	_	
Unit		1	-				
Path		c:/					Go
Copy File							
Source	Unit	1 💌	startup-config 💌	C:/config.cfg			
Destination	Unit	1 💌	running-config 💌	C:/config.cfg		Replace	
						Apply	Cancel

Figure 4-72 File System - Copy Window

When copying a file to the file system of this switch, the user must enter the **Source** and **Destination** path. Tick the **Replace** check box to replace the current running configuration with the indicated configuration file.

Click the **Apply** button to initiate the copy.

Click the **Cancel** button the discard the process.

# **Physical Stacking**

The Switch supports switch stacking, where a set of six switches can be combined and managed by one IP address through Telnet, the Web UI, the RJ45 console port, or through SNMP. Each switch of this series has two stacking ports located at the front of the device, which can be used to connect other devices and make them stack together. After adding these stacking ports, the user may connect

these ports together using fiber cables or Direct Attach Cables (DAC) in one of two possible topologies.

- **Duplex Chain** -The Duplex Chain topology stacks switches together in a chain-link format. Using this method, data transfer is only possible in one direction and if there is a break in the chain, then data transfer will obviously be affected.
- **Duplex Ring** -The Duplex Ring stacks switches in a ring or circle format where data can be transferred in two directions. This topology is very resilient because if there is a break in the ring, data can still be transferred through the stacking cables between switches in the stack.

Figure 4-73 Switches stacked in a Duplex Chain

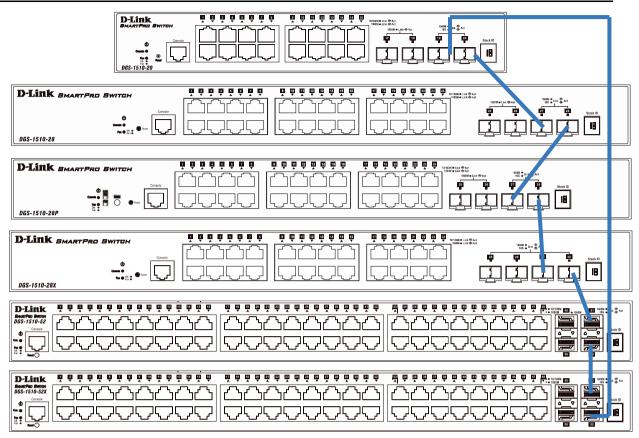

Figure 4-74 Switches stacked in a Duplex Ring

Within each of these topologies, each switch plays a role in the Switch stack. These roles can be set by the user per individual Switch, or if desired, can be automatically determined by the Switch stack. Three possible roles exist when stacking with the Switch.

**Primary Master** - The Primary Master is the leader of the stack. It will maintain normal operations, monitor operations and the running topology of the Stack. This switch will also assign Stack Unit IDs, synchronize configurations, and transmit commands to remaining switches in the switch stack. The Primary Master can be configured manually by assigning the Switch the highest priority (a lower number denotes a higher priority) before physically assembling the stack or it can be determined automatically, by the stack, through an election process which determines the lowest MAC address and will assign that switch as the Primary Master, if all priorities are the same. The Primary master are physically displayed by the seven segment LED to the far right on the front panel of the switch where this LED will flash between its given Box ID and 'H'.

**Backup Master** - The Backup Master is the backup to the Primary Master, and will take over the functions of the Primary Master if the Primary Master fails or is removed from the Stack. It also monitors the status of neighboring switches in the stack, will perform commands assigned to it by the Primary Master and will monitor the running status of the Primary Master. The Backup Master can be set by the user by assigning this Switch the second highest priority before physically assembling the stack, or it can be determined automatically by the stack through an election process that determines the second lowest MAC address and then will assign that switch as the Backup Master, if all priorities are the same. The Backup master are physically displayed by the seven segment LED to the far right on the front panel of the switch where this LED will flash between its given Box ID and 'h'.

**Slave** - Slave switches constitute the rest of the switch stack and although not Primary or Backup Masters, they can be placed into these roles when these other two roles fail or are removed from the stack. Slave switches perform operations requested by the master, monitor the status of neighbor switches in the stack and the stack topology, and adhere to the Backup Master's commands once it becomes a Primary Master. Slave switches will do a self-check to determine if it is to become the Backup Master if the Backup Master is promoted to the Primary Master, or if the Backup Master fails or is removed from the switch stack. If both Primary and Backup masters fail, or are removed from the Switch stack, it will determine if it is to become the Primary Master. These roles will be determined, first by priority and if the priority is the same, the lowest MAC address.

Once switches have been assembled in the topology desired by the user and powered on, the stack will undergo three processes until it reaches a functioning state.

**Initialization State** - This is the first state of the stack, where the runtime codes are set and initialized and the system conducts a peripheral diagnosis to determine each individual switch is functioning properly.

**Master Election State** - Once the codes are loaded and initialized, the stack will undergo the Master Election State where it will discover the type of topology used, elect a Primary Master and then a Backup Master.

**Synchronization State** - Once the Primary Master and the Backup Master have been established, the Primary Master will assign Stacking Unit IDs to switches in the stack, synchronize configurations for all switches and then transmit commands to the rest of the switches based on the users configurations of the Primary Master.

Once these steps have been completed, the switch stack will enter a normal operating mode.

#### Stack Switch Swapping

The stacking feature of the Switch supports "hot swapping" of switches in and out of the running stack. Users may remove or add switches to the stack without powering down or largely affecting the transfer of data between switches in the stack, with a few minor provisions.

When switches are "hot inserted" into the running stack, the new switch may take on the Primary Master, Backup Master or Slave role, depending on configurations set on the newly added switch, such as configured priority or MAC address. Yet, if adding two stacks together that have both previously undergone the election process, and therefore both have a Primary Master and a Backup master, a new Primary Master will be elected from one of the already existing Primary Masters, based on priority or MAC address. This Primary Master will take over all of the Primary Master's roles for all new switches that were hot inserted. This process is done using discovery packets that circulate through the switch stack every 1.5 seconds until the discovery process has been completed.

The "hot remove" action means removing a device from the stack while the stack is still running. The hot removal is detected by the stack when it fails to receive heartbeat packets during its specified interval from a device, or when one of the stacking ports links is down. Once the device has been removed, the remaining switches will update their stacking topology database to reflect the change. Any one of the three roles, Primary Master, Backup Master, or Slave, may be removed from the stack, yet different processes occur for each specific device removal.

If a Slave device has been removed, the Primary Master will inform other switches of the hot remove of this device through the use of unit leave messages. Switches in the stack will clear the configurations of the unit removed. Dynamically learned databases, such as ARP, will also be cleared.

If the Backup Master has been hot removed, a new Backup Master will be chosen through the election process previously described. Switches in the stack will clear the configurations of the unit removed. Dynamically learned databases, such as ARP, will also be cleared. Then the Backup Master will begin backing up the Primary Master when the database synchronization has been completed by the stack.

If the Primary Master is removed, the Backup Master will assume the Primary Master's role and a new Backup Master will be chosen using the election process. Switches in the stack will clear the configurations of the unit removed. Dynamically learned databases, such as ARP, will also be cleared. The new Primary Master will inherit the MAC and IP address of the previous Primary Master to avoid conflict within the stack and the network itself.

If both the Primary Master and the Backup Master are removed, the election process is immediately processed, and a new Primary Master and Backup Master are determined. Switches in the stack will clear the configurations of the units removed, and dynamically learned databases, such as ARP, will be cleared as well. Static switch configurations still remain in the database of the remaining switches in the stack and those functions will not be affected.

**NOTE:** If there is a Box ID conflict when the stack is in the discovery phase, the device will enter a special standalone topology mode. Users can only get device information, configure Box IDs, save and reboot. All stacking ports will be disabled and an error message will be produced on the local console port of each device in the stack. Users must reconfigure Box IDs and reboot the stack.

#### Figure 4-75 Physical Stacking Window

The fields that can be configured for **Physical Stacking** are described below:

Parameter	Description
Stacking Mode	Select this option to enable or disable the stacking mode.
Stack Preempt	Select this option to enable or disable preemption of the master role to come into play when a unit with a better priority is added to the Switch later.
Trap State	Select this option to enable or disable sending of stacking related traps.

Click the **Apply** button to accept the changes made.

The fields that can be configured for Stack ID are described below:

Parameter	Description
Current Unit ID	Select the unit ID of the switch in the stack.
New Box ID	Select the new box ID for the switch that is selected in the <b>Current Unit ID</b> . The user may choose any number between 1 and 6 to identify the switch in the switch stack. <b>Auto</b> will automatically assign a box number to the switch in the switch stack.
Priority	Enter the priority of the Switch stacking unit. The range is from 1 to 63.

Click the **Apply** button to accept the changes made.

# Virtual Stacking (SIM)

D-Link Single IP Management (SIM) is a concept that will stack switches together over Ethernet instead of using stacking ports or modules. There are some advantages in implementing the Single IP Management feature:

- SIM can simplify management of small workgroups or wiring closets while scaling the network to handle increased bandwidth demand.
- SIM can reduce the number of IP address needed in your network.

• SIM can eliminate any specialized cables for stacking connectivity and remove the distance barriers that typically limit your topology options when using other stacking technology.

Switches using D-Link Single IP Management (labeled here as SIM) must conform to the following rules:

- SIM is an optional feature on the Switch and can easily be enabled or disabled through the Command Line Interface or Web Interface. SIM grouping has no effect on the normal operation of the Switch in the user's network.
- There are three classifications for switches using SIM. The Commander Switch (CS), which is
  the master switch of the group, Member Switch (MS), which is a switch that is recognized by
  the CS a member of a SIM group, and a Candidate Switch (CaS), which is a Switch that has a
  physical link to the SIM group but has not been recognized by the CS as a member of the SIM
  group.
- A SIM group can only have one Commander Switch (CS).
- A SIM group accepts up to 32 switches (numbered 1-32), not including the Commander Switch (numbered 0).
- Members of a SIM group cannot cross a router.
- There is no limit to the number of SIM groups in the same IP subnet (broadcast domain); however, a single switch can only belong to one group.
- If multiple VLANs are configured, the SIM group will only utilize the management VLAN on any switch.
- SIM allows intermediate devices that do not support SIM. This enables the user to manage switches that are more than one hop away from the CS.

The SIM group is a group of switches that are managed as a single entity. The Switch may take on three different roles:

- **Commander Switch (CS)** This is a switch that has been manually configured as the controlling device for a group, and takes on the following characteristics:
  - It has an IP Address.
  - It is not a command switch or member switch of another Single IP group.
  - It is connected to the member switches through its management VLAN.
- **Member Switch (MS)** This is a switch that has joined a single IP group and is accessible from the CS, and it takes on the following characteristics:
  - It is not a CS or MS of another IP group.
  - It is connected to the CS through the CS management VLAN.
- Candidate Switch (CaS) This is a switch that is ready to join a SIM group but is not yet a member of the SIM group. The Candidate Switch may join the SIM group of the Switch by manually configuring it to be a MS of a SIM group. A switch configured as a CaS is not a member of a SIM group and will take on the following characteristics:
  - It is not a CS or MS of another Single IP group.
  - It is connected to the CS through the CS management VLAN

The following rules also apply to the above roles:

- Each device begins in a Candidate state.
- A CS must change its role to CaS and then to MS, to become a MS of a SIM group. Thus, the CS cannot directly be converted to a MS.
- The user can manually configure a CS to become a CaS.
- A MS can become a CaS by:
  - Being configured as a CaS through the CS.
  - If report packets from the CS to the MS time out.
- The user can manually configure a CaS to become a CS
- The CaS can be configured through the CS to become a MS.

After configuring one switch to operate as the CS of a SIM group, additional DGS-1510 Series switches may join the group by manually configuring the Switch to be a MS. The CS will then serve as the in band entry point for access to the MS. The CS's IP address will become the path to all MS's of the group and the CS's Administrator's password, and/or authentication will control access to all MS's of the SIM group.

With SIM enabled, the applications in the CS will redirect the packet instead of executing the packets. The applications will decode the packet from the administrator, modify some data, and then send it to the MS. After execution, the CS may receive a response packet from the MS, which it will encode and send it back to the administrator.

When a CaS becomes a MS, it automatically becomes a member of the first SNMP community (includes read/write and read only) to which the CS belongs. However, if a MS has its own IP address, it can belong to SNMP communities to which other switches in the group, including the CS, do not belong.

#### Upgrade to Version 1.61

To better improve SIM management, the DGS-1510 Series switches have been upgraded to version 1.61 in this release. Many improvements have been made, including the Commander Switch (CS) now having the capability to automatically rediscover member switches that have left the SIM group, either through a reboot or web malfunction. This is accomplished through the use of Discover packets and Maintenance packets that previously configured SIM members will send and receive after a reboot. Once a MS has had its MAC address and password saved to the CS's database, if a reboot occurs in the MS, the CS will keep this MS information in its database and when a MS has been rediscovered, it will add the MS back into the SIM tree automatically. No configuration will be necessary to rediscover these switches.

There are some instances where pre-saved MS Switches cannot be rediscovered. For example, if the Switch is still powered down, if it has become the member of another group, or if it has been configured to be a Commander Switch, the rediscovery process cannot occur.

The topology map now includes new features for connections that are a member of a port trunking group. It will display the speed and number of Ethernet connections creating this port trunk group.

- Firmware The switch now supports MS firmware downloads from a TFTP server.
- **Configuration Files** This switch now supports downloading and uploading of configuration files both to (for configuration restoration) and from (for configuration backup) MS's, using a TFTP server.
- Log The Switch now supports uploading MS log files to a TFTP server.

The user may zoom in and zoom out when utilizing the topology window to get a better, more defined view of the configurations.

## **Single IP Settings**

This window is used to configure the SIM settings. The Switch is set as a Candidate (CaS) as the factory default configuration and Single IP Management is disabled.

To view the following window, click **Management > Virtual Stacking (SIM) > Single IP Settings**, as shown below:

Single IP Settings		
SIM State Configure		
SIM State	Disabled	Apply
SIM Role Configure		
Role State	Candidate	
Group Name	Group	Apply
SIM Settings		
Trap State	Disabled	
Interval (30-90)	30 sec	
Hold Time (100-255)	100 sec	
Management VLAN (1-4094)	1	Apply

Figure 4-76 Single IP Settings Window

The fields that can be configured for SIM State Configure are described below:

Parameter	Description
SIM State	Select this option to enable or disable the SIM state on the Switch. Select <b>Disabled</b> to render all SIM functions on the Switch inoperable.

Click the **Apply** button to accept the changes made.

Parameter	Description
Role State	Select to change the SIM role of the Switch. Options to choose from are:
	<ul> <li>Candidate - A Candidate Switch (CaS) is not the member of a SIM group but is connected to a Commander Switch. This is the default setting for the SIM role of the Switch.</li> <li>Commander - Select to make the Switch a Commander Switch (CS). The user may join other switches to this Switch, over Ethernet, to be part of its SIM group. Choosing this option will also enable the Switch to be configured for SIM.</li> </ul>
Group Name	Enter a group name. This is optional. This name is used to segment switches into different SIM groups.

The fields that can be configured for **SIM Role Configure** are described below:

Click the  $\ensuremath{\textbf{Apply}}$  button to accept the changes made.

The fields that can be configured for **SIM Settings** are described below:

Parameter	Description
Traps State	Select to enable or disable the SIM trap state.
Interval	Enter the interval in seconds. The range is from 30 to 90.
Hold Time	Enter the hold-time in seconds. The range is from 100 to255.

Parameter	Description
Management VLAN	Enter the single IP management message VLAN ID.

After enabling the Switch to be a Commander Switch (CS), the **Single IP Management** folder will then contain four added links to aid the user in configuring SIM through the web, including **Topology**, **Firmware Upgrade**, **Configuration Backup/Restore**, and **Upload Log File**.

# Topology

This window is used to configure and manage the Switch within the SIM group.

To view the following window, click **Management > Virtual Stacking (SIM) > Topology**, as shown below:

File Group Device	View Help					
Cluster 1	Device Name	Local Port	Speed	Remote Port	MAC Address	Model Name
×.	Switch	-	-	-	3C-1E-04-A1-CC-00	DGS-1510-28XMP
Switch	Switch	2	Gigabit-Full	2	3C-1E-04-52-10-E0	DGS-1510-52XMP
Switch	Switch	3	Gigabit-Full	3	FC-75-16-15-52-F0	DGS-1510-52X
Switch						

Figure 4-77 Topology Window

There is a menu bar at the top of the window containing File, Group, Device, View, and Help.

#### File

#### Print Topology

On the **File** menu, select **Print Topology** to print the SIM topology map to any of the printers configured on the PC accessing the Web UI.

#### Preference

On the File menu, select Preference to configure the display properties for the SIM topology map.

Preference	
Interval (10-300)	20
Show All	O Show Member Only
	OK Cancel

Figure 4-78 Preference

The fields that can be configured are described below:

Parameter	Description
Interval	Enter the SIM topology display refresh interval value here. The range is from 10 to 300.
Show All	Select this option to display all available SIM devices in the topology.
Show Member Only	Select this option to only display SIM member devices in the topology.

Click the  $\mathbf{OK}$  button to accept the changes made.

Click the **Cancel** button to discard the changes made.

#### Group

#### Add to Group

Select a Candidate Switch (CaS) from the list and then select **Add to Group** on the **Group** menu to add the selected CaS to the SIM group. Password authentication is required when a CaS is added to the SIM group.

Input Passwo	rd	
Password		
	Apply Cancel	

Figure 4-79 Add to Group (Input Password)

The fields that can be configured are described below:

Parameter	Description
Password	Enter the password of the CaS.

Click the **Apply** button to add the CaS to the SIM group.

Click the **Cancel** button to discard the addition and return to the Topology window.

#### **Remove from Group**

Select a Member Switch (MS) from the list and then select **Remove from Group** on the **Group** menu to remove the selected MS from the SIM group.

#### Device

#### Configure

Select a device from the list and then select **Configure** on the **Device** menu to connect to the Web User Interface (if available) on the selected device.

#### View

#### Refresh

On the View menu, select Fresh to refresh the items displayed in the page.

#### Topology

On the View menu, select Topology to view the following:

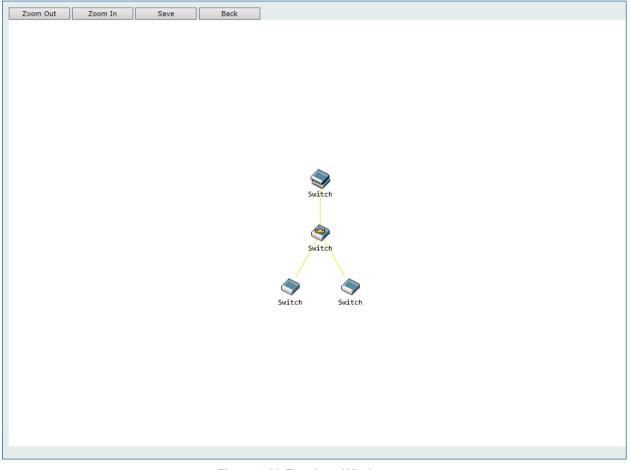

Figure 4-80 Topology Window

Click the **Zoom In** button enlarge the size of the displayed items. Click the **Zoom Out** button reduce the size of the displayed items. Click the **Save** button to save the display. Click the **Back** button to return to the previous window. This window will display how the devices within the SIM Group connect to other groups and devices. Possible icons on this window are as follows:

lcon	Description	lcon	Description
$\langle \! \rangle$	Group		Layer 3 Member Switch

#### <u>Tool Tips</u>

In the Topology view window, the mouse plays an important role in configuration and in viewing device information. Point to a specific device in the Topology window to display more information about the device

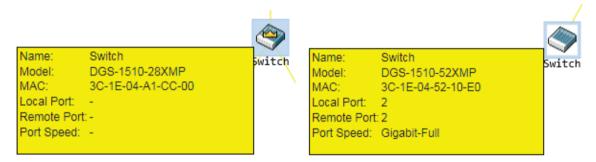

Figure 4-81 Device Information Utilizing the Tool Tip

Point to a line between two devices to display the connection speed between the two devices.

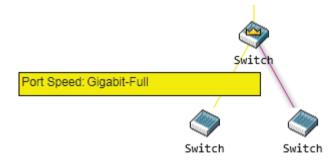

Figure 4-82 Port Speed Utilizing the Tool Tip

#### **Righ-Click**

Right-click a device to allow the user to perform various functions, depending on the role of the Switch in the SIM group and the icon associated with it.

Group	Commander Switch	Member Switch	Candidate Switch
Swi Property	5wiProperty	Swi Remove from Group Configure Property	Swi Add to Group Property

The fields that can be configured are described below:

Parameter	Description
Property	Specifies to display more information about the device.
Configure	(Member Switch Only) Specifies to connect to the Web User Interface (if available) on the selected device.
Add to Group	(Candidate Switch Only) Specifies to add the selected CaS to the SIM group. Password authentication is required when a CaS is added to the SIM group.
Remove from Group	(Member Switch Only) Specifies to remove the selected MS from the SIM group.

The fields displayed are described below:

Parameter	Description
Name	Displays the Device Name of the Switches in the SIM group configured. If the device is not configured with a name, it will be given the name default and tagged with the last six digits of the MAC address to identify it.

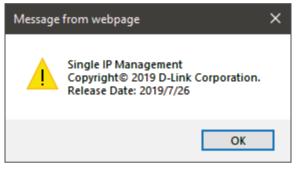

DGS-1510 Series Gigabit Ethernet SmartPro Switch Web UI Reference Guide

Parameter	Description
Model	Displays the model name of the Switch.
MAC	Displays the MAC address of the Switch.
Local Port	Displays the number of the physical port on the CS that the MS or CaS is connected to. The CS will have no entry in this field.
Remote Port	Displays the number of the physical port on the MS or CaS that the CS is connected to. The CS will have no entry in this field.
Port Speed	Displays the connection speed between the CS and the MS or CaS.

#### Help

#### About

On the Help menu, select About to display the SIM Copyright information and release date.

# **Firmware Upgrade**

This window is used to upgrade firmware from the Commander Switch to the Member Switch. Member Switches will be listed in the table.

To view the following window, click **Management > Virtual Stacking (SIM) > Firmware Upgrade**, as shown below:

Download
Download
Device Name
Switch

Figure 4-88 Firmware Upgrade Window

The fields that can be configured are described below:

Parameter	Description
TFTP Server IP	Enter the TFTP server IP address.
Path\Filename	Enter the path and file name.

Click the **Download** button to update the firmware.

To specify a certain Switch for firmware download, tick its corresponding check box.

# **Configuration File Backup/Restore**

This window is used to upgrade configuration files from the Commander Switch to the Member Switch using a TFTP server. Member Switches will be listed in the table.

To view the following window, click **Management > Virtual Stacking (SIM) > Configuration File Backup/Restore**, as shown below:

nfiguration Fi	le Backup/Restore –					
FTP Server IP		Path\Filename			Restore	e Backup
otal Entries: 1	Member ID	MAC Address	Platform	Hold Time	Firmware Version	Device Name

Figure 4-89 Configuration File Backup/Restore Window

The fields that can be configured are described below:

Parameter	Description
TFTP Server IP	Enter the TFTP server IP address.
Path\Filename	Enter the path and file name.

Click the **Restore** button to update the configuration from a TFTP server to the member switch.

Click the **Backup** button to back up the configuration file to a TFTP server.

## **Upload Log File**

This window is used to upload log files from SIM member switches to a specified PC.

To view the following window, click **Management > Virtual Stacking (SIM) > Upload Log File**, as shown below:

load Log File						
FTP Server IP		Path\Filename				
		T dani lionamo				Upload
	14 C					Upload
otal Entries: 1						
otal Entries: 1		MAC Address	Platform	Hold Time	Firmware Version	Device Name
		MAC Address	Platform	Hold Time	Firmware Version	

Figure 4-90 Upload Log File Window

The fields that can be configured are described below:

Parameter	Description
TFTP Server IP	Enter the TFTP server IP address.
Path\Filename	Enter the path and file name.

Click the **Upload** button to initiate the file transfer.

# **D-Link Discovery Protocol**

This window is used to configure and display D-Link Discovery Protocol (DDP).

#### To view the following window, click **Management > D-Link Discovery Protocol**, as shown below:

D-Link Discovery Protocol					
D-Link Discovery Protocol DDP Global Settings					
D-Link Discovery Protocol State Report Timer	<ul> <li>Enabled</li> <li>Disabled</li> <li>30</li> <li>sec</li> </ul>				Apply

	eth1/0/11			Enabled	
	eth1/0/12			Enabled	
	eth1/0/13			Enabled	
	eth1/0/14			Enabled	
	eth1/0/15			Enabled	

#### Figure 4-91 D-Link Discovery Protocol Window

The fields that can be configured for **D-Link Discovery Protocol** are described below:

Parameter	Description
D-Link Discovery Protocol State	Select this option to enable or disable DDP global state.
Report Timer	Select the interval in seconds between two consecutive DDP report messages. Options to choose from are <b>30</b> , <b>60</b> , <b>90</b> , <b>120</b> , and <b>Never</b> .

Click the **Apply** button to accept the changes made.

The fields that can be configured for **DDP Port Settings** are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
State	Select this option to enable or disable DDP port state.

# 5. Layer 2 Features

FDB VLAN STP ERPS (G.8032) Loopback Detection Link Aggregation L2 Multicast Control LLDP

# FDB

# **Static FDB**

# Unicast Static FDB

This window is used to view and configure the static unicast forwarding settings on the Switch.

To view the following window, click **L2 Features > FDB > Static FDB > Unicast Static FDB**, as shown below:

Unicast Static FDB			
Unicast Static FDB			
Port I eth1/0	VID (1-4094)	MAC Address 00-84-57-00-00-00	Apply
Total Entries: 1			Delete All
VID	MAC Address	Port	
1	00-84-57-00-00-00	eth1/0/3	Delete
		1/1  < <	1 > >] Go

Figure 5-1 Unicast Static FDB Window

The fields that can be configured are described below:

Parameter	Description
Port / Drop	Allows the selection of the port number on which the MAC address entered resides. This option could also drop the MAC address from the unicast static FDB. When selecting <b>Port</b> , select the switch unit and port number.
Unit Number	Select the switch unit that will be used for this configuration here, when <b>Port</b> is selected in the previous drop-down list.
Port Number	Select the port number used here, when <b>Port</b> is selected in the previous drop-down list.
VID	Enter the VLAN ID on which the associated unicast MAC address resides.
MAC Address	Enter the MAC address to which packets will be statically forwarded or dropped. This must be a unicast MAC address.

Click the **Apply** button to accept the changes made.

Click the **Delete All** button to delete all the entries found in the display table.

Click the **Delete** button to remove the specified entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### Multicast Static FDB

This window is used to view and configure the multicast static FDB settings.

To view the following window, click L2 Features > FDB > Static FDB > Multicast Static FDB, as shown below:

Multicast Static FDB			
Multicast Static FDB			
Unit From Port     I   Image: Constraint of the second secon		D (1-4094) MAC Address	Apply
Total Entries: 1			Delete All
VID	MAC Address	Egress Ports	
1	01-00-00-00-02	eth1/0/2	Delete
		1/1	< 1 > >  Go

Figure 5-2 Multicast Static FDB Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
VID	Enter the VLAN ID of the VLAN the corresponding MAC address belongs to.
MAC Address	Enter the static destination MAC address of the multicast packets. This must be a multicast MAC address. The destination MAC address should start with 01. For example, 01-00-00-00-00-02.

Click the **Apply** button to accept the changes made.

Click the **Delete All** button to remove all the entries.

Click the **Delete** button to remove the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **MAC Address Table Settings**

This window is used to view and configure the MAC address table's global settings.

To view the following window, click L2 Features > FDB > MAC Address Table Settings, as shown below:

MAC Address Table Setting	S	
Global Settings	MAC Address Learning	
Aging Time (0, 10-1000000) Aging Destination Hit	300 sec	Apply

Figure 5-3 MAC Address Table Settings (Global Settings) Window

The fields that can be configured are described below:

Parameter	Description
Aging Time	Enter the MAC address table's aging time value here. This value must be between 10 and 1000000 seconds. Entering 0 will disable MAC address aging. By default, this value is 300 seconds.
Aging Destination Hit	Select to enable or disable the aging destination hit function.

Click the **Apply** button to accept the changes made.

After clicking the **MAC Address Learning** tab, at the top of the page, the following page will be available.

AC Addr	ess Table Settings			
Glo	bal Settings	MAC Address Learni	ng

		eth1/0/11		Enabled
		eth1/0/12		Enabled
		eth1/0/13		Enabled
		eth1/0/14		Enabled
		eth1/0/15		Enabled

Figure 5-4 MAC Address Table Settings (MAC Address Learning) Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the range of ports that will be used for this configuration here.
State	Select to enable or disable the MAC address learning function on the ports specified here.

# **MAC Address Table**

This window is used to view the entries listed in the MAC address table.

To view the following window, click L2 Features > FDB > MAC Address Table, as shown below:

AC Address Table -			
Port	1 💌 eth1/0/1 💌		Clear Dynamic by Port Find
/ID (1-4094)			Clear Dynamic by VLAN Find
MAC Address	00-84-57-00-00-00		Clear Dynamic by MAC Find
fotal Entries: 4			Clear All View All
VID	MAC Address	Туре	Port
1	00-01-02-03-04-00	Static	CPU
1	00-03-FF-BE-2E-18	Dynamic	eth1/0/1
1	00-84-57-00-00-00	Static	eth1/0/3
1	01-00-00-00-02	Static	eth1/0/2

The fields that can be configured are described below:

Parameter	Description
Port	Select the switch unit and the port that will be used for this configuration here.
VID	Enter the VLAN ID that will be used for this configuration here.
MAC Address	Enter the MAC address that will be used for this configuration here.

Click the **Clear Dynamic by Port** button to clear the dynamic MAC address listed on the corresponding port.

Click the **Clear Dynamic by VLAN** button to clear the dynamic MAC address listed on the corresponding VLAN.

Click the Clear Dynamic by MAC button to clear the dynamic MAC address entered.

Click the **Find** button to locate a specific entry based on the information entered.

Click the Clear All button to clear all dynamic MAC addresses.

Click the View All button to display all the MAC addresses recorded in the MAC address table.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **MAC Notification**

This window is used to view and configure MAC notification.

To view the following window, click L2 Features > FDB > MAC Notification, as shown below:

Figure 5-6 MAC Notification (MAC Notification Settings) Window

The fields that can be configured are described below:

Parameter	Description
MAC Address Notification	Select to enable or disable MAC notification globally on the Switch.
Interval	Enter the time value between notifications. This value must be between 1 and 2147483647 seconds. By default, this value is 1 second.
History Size	Enter the maximum number of entries listed in the history log used for notification. This value must be between 0 and 500. By default, this value is 1.
MAC Notification Trap State	Select this option to enable or disable the MAC notification trap state.
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the range of ports that will be used for this configuration here.
Added Trap	Select this option to enable or disable the added trap for the port(s) selected.
Removed Trap	Select this option to enable or disable the removed trap for the port(s) selected.

Click the Apply button to accept the changes made for each individual section.

After clicking the MAC Notification History tab, the following page will be available.

MAC Notification Settings	MAC Notification History	
al Entries: 0		

Figure 5-7 MAC Notification (MAC Notification History) Window

A list of MAC notification messages will be displayed.

# VLAN

## **VLAN Configuration Wizard**

This window is used to start the VLAN configuration wizard.

### **Create/Configure VLAN**

To view the following window, click L2 Features > VLAN > VLAN Configuration Wizard, as shown below:

VLA	AN Configuration Wizard	
VLAN	N Configuration Wizard	
۲	Create VLAN	
	VID (1-4094)	
0	Configure VLAN	
	VID (1-4094)	
		Next

Figure 5-8 VLAN Configuration Wizard (Step 1) Window

The fields that can be configured are described below:

Parameter	Description
Create VLAN	<ul> <li>Select this option to create a new VLAN.</li> <li>VID - Enter the VLAN ID here. The range is from 1 to 4094.</li> </ul>
Configure VLAN	<ul> <li>Select this option to configure an existing VLAN.</li> <li>VID - Enter the VLAN ID here. The range is from 1 to 4094.</li> </ul>

Click the **Next** button to continue to the next step.

#### **Create VLAN**

After selecting the Create VLAN option and clicking the Next button, the following window will appear.

VID VLAN Name	2 VLAN	10002

Total Ent	ies: 1					
VID	VLAN Name	Description	Tagged Member Ports	Untagged Member Ports	VLAN Type	
1	default			1/0/1-1/0/50	Edit	Delete
					1/1 < < 1 >	>  Go

Figure 5-13 802.1Q VLAN Window

The fields that can be configured for 802.1Q VLAN are described below:

Parameter	Description
VID List	Enter the VLAN ID list that will be created here.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specific entry.

The fields that can be configured for <b>Find VLAN</b> are described below:
---

Parameter	Description
VID	Enter the VLAN ID that will be displayed here.

Click the **Find** button to locate a specific entry based on the information entered.

Click the View All button to locate all the entries.

Click the **Edit** button to re-configure the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

# **VLAN Interface**

### **VLAN Interface Settings**

This window is used to view and configure VLAN interface settings.

To view the following window, click **L2 Features > VLAN > VLAN Interface**, as shown below:

VLAN Interfac	/LAN Interface					
VLAN Interface Settings Port Summary						
Unit	Unit 1 🔽					
Unit 1 Settings						
Port	VLAN Mode	Ingress Checking	Acceptable Frame Type			
eth1/0/1	Hybrid	Enabled	Admit-All	Show Detail	Edit	
eth1/0/2	Hybrid	Enabled	Admit-All	Show Detail	Edit	
eth1/0/3	Hybrid	Enabled	Admit-All	Show Detail	Edit	
eth1/0/4	Hybrid	Enabled	Admit-All	Show Detail	Edit

eth1/0/9	Hybrid	Enabled	Admit-All	Show Detail	Edit	
eth1/0/10	Hybrid	Enabled	Admit-All	Show Detail	Edit	

Figure 5-14 VLAN Interface Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.

Click the **Show Detail** button to view detailed information about the VLAN on the specific interface. Click the **Edit** button to re-configure the specific entry.

AN Interface Information		
Port	eth1/0/1	
VLAN Mode	Hybrid	
Native VLAN	1	
Hybrid Untagged VLAN	1	
Hybrid Tagged VLAN		
Dynamic Tagged VLAN		
Ingress Checking	Enabled	
Acceptable Frame Type	Admit-All	

After clicking the VLAN Detail button, the following page will appear.

Figure 5-15 VLAN Interface Information Window

On this page, detailed information about the VLAN of the specific interface is displayed. Click the **Back** button to return to the previous page. After click the **Edit** button, the following window will appear. This is a dynamic window that will change when a different **VLAN Mode** was selected. When **Access** was selected as the **VLAN Mode**, the following page will appear.

Configure VLAN Interface		_	_	
Configure VLAN Interface				
Port	eth1/0/1	Clone		
VLAN Mode	Access 🗸	Unit	From Port	To Port
Acceptable Frame	Admit All	1 🗸	eth1/0/1 🗸	eth1/0/1
Ingress Checking	Enabled      Disabled			
VID (1-4094)	1			
			[	Back Apply

Figure 5-16 Configure VLAN Interface - Access Window

The fields that can be configured are described below:

Parameter	Description
VLAN Mode	Select the VLAN mode option here. Options to choose from are <b>Access</b> , <b>Hybrid</b> , and <b>Trunk</b> .
Acceptable Frame	Select the acceptable frame behavior option here. Options to choose from are <b>Tagged Only</b> , <b>Untagged Only</b> , and <b>Admit All</b> .
Ingress Checking	Select this option to enable or disable the ingress checking function.
VID	Enter the VLAN ID used for this configuration here. This value must be between 1 and 4094.
Clone	Tick this option to apply the configuration to the specified ports.
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.

Click the **Apply** button to accept the changes made.

Click the **Back** button to return to the previous window.

When <b>H</b>	vbrid wa	s selected a	s the VI	AN Mode	the following	page will appear.
VVIICII II	ybnu wa	s selected a		.AN MOUE,	the following	page will appear.

Configure VLAN Interface		_		
Configure VLAN Interface				
Port	eth1/0/1	Clone		
VLAN Mode	Hybrid 🗸	Unit	From Port	To Port
Acceptable Frame	Admit All	1 🗸	eth1/0/1	eth1/0/1

# 802.1v Protocol VLAN

### **Protocol VLAN Profile**

This window is used to view and configure the Protocol VLAN profile.

To view the following window, click L2 Features > VLAN > 802.1v Protocol VLAN > Protocol VLAN Profile, as shown below:

Protocol VLAN Profile					
Add Protocol VLAN Profile					
Profile ID (1-16) Frame Type Ethernet2 V Ether Type (0x0-0xFFFF) 0x Apply					
Total Entries: 1					
Profile ID	Frame Type	Ether Type			
1	Ethernet2	0xFFFF(User defined)	Delete		

Figure 5-20 9 Protocol VLAN Profile Window

The fields that can be configured are described below:

Parameter	Description
Profile ID	Enter the profile ID that will be created here.

Parameter	Description
Frame Type	Select the frame type here. Options to choose from are <b>Ethernet2</b> , <b>SNAP</b> and <b>LLC</b> .
Ether Type	Enter the Ethernet type in hexadecimal form.

Click the **Delete** button to remove the specified entry.

### **Protocol VLAN Profile Interface**

This window is used to view and configure the Protocol VLAN profile interface.

To view the following window, click L2 Features > VLAN > 802.1v Protocol VLAN > Protocol VLAN Profile Interface, as shown below:

d New Protocol VLAN Interface						
ort 1 🗸 eth1/0/1	Profile ID 1	VID (1-4094)		Priority 0	~	Apply
nit 1 Settings						10
nit 1 Settings Port	Profile ID		VID	Priority	/	

#### Figure 5-21 Protocol VLAN Profile Interface Window

The fields that can be configured are described below:

Parameter	Description
Port	Select the switch unit and the port that will be used for this configuration here.
Profile ID	Select the ID of the protocol group.
VID	Enter the VLAN ID of the Protocol VLAN.
Priority	Select the priority of the Protocol VLAN.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

### GVRP

### **GVRP** Global

This window is used to view and configure the GARP VLAN Registration Protocol (GVRP) global settings.

To view the following window, click L2 Features > VLAN > GVRP > GVRP Global, as shown below:

GVRP Global	_		
GVRP Global			
Global GVRP State	CEnabled	Disabled	
Dynamic VLAN Creation	Enabled	Disabled	
			Apply

Figure 5-22 GVRP Global Window

The fields that can be configured are described below:

Parameter	Description
Global GVRP State	Select this option to enable or disable the global GVRP state here.
Dynamic VLAN Creation	Select this option to enable or disable the dynamic VLAN creation function here.

Click the **Apply** button to accept the changes made.

### **GVRP** Port

This window is used to view and configure the GVRP port settings.

To view the following window, click L2 Features	> VLAN > GVRP > GVRP Port, as shown below:

Figure 5-23 GVRP Port Window

The fields that can be configured are described below:	
--	--

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
GVRP Status	Select this option to enable or disable the GVRP port status. This enables the port to dynamically become a member of a VLAN. By default, this option is disabled.
Join Time	Enter the Join Time value in centiseconds. This value must be between 10 and 10000 centiseconds. By default, this value is 20 centiseconds.
Leave Time	Enter the Leave Time value in centiseconds. This value must be between 10 and 10000 centiseconds. By default, this value is 60 centiseconds.
Leave All Time	Enter the Leave All Time value in centiseconds. This value must be between 10 and 10000 centiseconds. By default, this value is 1000 centiseconds.

### **GVRP Advertise VLAN**

This window is used to view and configure the GVRP advertised VLAN settings.

To view the following window, click L2 Features > VLAN > GVRP > GVRP Advertise VLAN, as shown below:

	vertise VLAN				
GVRP Adver	tise VLAN				
Unit	From Port	To Port	Action	Advertise VID List

				1/1  < < 1 > >  Go

Figure 5-29 L2VLAN Interface Description Window

The fields that can be configured for Create L2VLAN Interface Description are described below:

Parameter	Description
L2VLAN Interface	Enter the ID of the Layer 2 VLAN interface here.
Description	Enter the description for the Layer 2 VLAN interface here.

Click the **Apply** button to accept the changes made.

The fields that can be configured for Find L2VLAN Interface Description are described below:

Parameter	Description
L2VLAN Interface	Enter the ID of the Layer 2 VLAN interface here.

Click the **Find** button to locate a specific entry based on the information entered.

Click the View All button to view all the entries.

Click the **Delete Description** button to remove the description from the specified Layer 2 VLAN.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

# **Auto Surveillance VLAN**

#### **Auto Surveillance Properties**

This window is used to configure the auto surveillance VLAN global settings and display the ports surveillance VLAN information.

The Switch regards a host as an NVR once it connects to the IPC via HTTP, HTTPS, or RTSP. The Switch will learn the NVR on this port and move it into the surveillance VLAN until the triggered aging mechanism age-out or the LAN cable is removed.

When the host sends an ARP request to an IPC, the Switch still regards the host as an NVR but only temporarily move it into the surveillance VLAN. The host will automatically be moved out of the surveillance VLAN after about 30 seconds if it is not recognized as an NVR anymore.

**NOTE:** The same PC, or PCs connected to the same LAN port on the Switch, cannot simultaneously manage the Switch and the IP cameras connected to the Switch.

# To view the following window, click L2 Features > VLAN > Auto Surveillance VLAN > Auto Surveillance Properties, as shown below:

Auto Surveillance Properties			~
Global Settings			
Surveillance VLAN State	Enabled Disabled		
Surveillance VLAN ID (2-4094)	2		
Surveillance VLAN CoS	5		
Aging Time (1-65535)	720 min

Figure 5-30 Auto Surveillance Properties Window

The fields that can be configured for **Global Settings** are described below:

Parameter	Description
Surveillance VLAN State	Select this option to enable or disable the surveillance VLAN state
Surveillance VLAN ID	Enter the surveillance VLAN ID. The range is from 2 to 4094.
Surveillance VLAN CoS	Select the priority of the surveillance VLAN from 0 to 7.
Aging Time	Enter the aging time of surveillance VLAN. The range is from 1 to 65535 minutes. The default value is 720 minutes. The aging time is used to remove a port from surveillance VLAN if the port is an automatic surveillance VLAN member. When the last surveillance device stops sending traffic and the MAC address of this surveillance device is aged out, the surveillance VLAN aging timer will be started. The port will be removed from the surveillance VLAN after expiration of surveillance VLAN aging timer. If the surveillance traffic resumes during the aging time, the aging timer will be reset and stop.
ONVIF Discover Port	Enter the TCP/UDP port number here. The range is either 554, or from 1025 to 65535. This is used to configure the TCP/UDP port number for RTSP stream snooping. ONVIF-capable IPC and ONVIF-capable NVR utilize WS-Discovery to find other devices. Once IPCs are discovered, the Switch can further discover NVRs

Parameter	Description
	by snooping RTSP, HTTP, and HTTPS packets between NVRs and IPCs. These packets cannot be snooped if the TCP/UDP port is not equal to the RTSP port number.

The fields that can be configured for **Port Settings** are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
State	Select this option to enable or disable the state of the port.

Click the **Apply** button to accept the changes made.

### **MAC Settings and Surveillance Device**

This window is used to configure the user-defined surveillance device OUI and display the surveillance VLAN information.

To view the following window, click L2 Features > VLAN > Auto Surveillance VLAN > MAC Settings and Surveillance Device, as shown below:

User-defined	MAC Settings Auto Surveilla	nce VLAN Summary

# Voice VLAN

### Voice VLAN Global

Voice VLAN is a VLAN used to carry voice traffic from IP phone. Because the sound quality of an IP phone call will be deteriorated if the data is unevenly sent, the quality of service (QoS) for voice traffic shall be configured to ensure the transmission priority of voice packet is higher than normal traffic.

The switches determine whether a received packet is a voice packet by checking its source MAC address. If the source MAC addresses of packets comply with the organizationally unique identifier (OUI) addresses configured by the system, the packets are determined as voice packets and transmitted in voice VLAN.

To view the following window, click L2 Features > VLAN > Voice VLAN > Voice VLAN Global, as shown below:

Voice VLAN Global		
Voice VLAN Global		
Voice VLAN State Voice VLAN ID (2-4094)	Enabled     Oisabled	Apply
Voice VLAN CoS Aging Time (1-65535)	5 <b>•</b> 720 min	Apply

Figure 5-39 Voice VLAN Global Window

The fields that can be configured are described below:

Parameter	Description			
Voice VLAN State	Select this option to enable or disable the voice VLAN.			
Voice VLAN ID	nter the voice VLAN ID. The value is range from 2 to 4094.			
Voice VLAN CoS	Select the priority of the voice VLAN from 0 to 7.			
Aging Time	Enter the aging time of surveillance VLAN. The range is from 1 to 65535 minutes. The default value is 720 minutes. The aging time is used to remove a port from voice VLAN if the port is an automatic VLAN member. When the last voice device stops sending traffic and the MAC address of this voice device is aged out, the voice VLAN aging timer will be started. The port will be removed from the voice VLAN after expiration of voice VLAN aging timer. If the voice traffic resumes during the aging time, the aging timer will be reset and stop.			

Click the Apply button to accept the changes made for each individual section.

## Voice VLAN Port

This window is used to show the ports voice VLAN information.

To view the following window, click **L2 Features > VLAN > Voice VLAN > Voice VLAN Port**, as shown below:

Voice VLAN Port				_	
Voice VLAN Port

	Total Entries: 0							
	Index Port Chassis ID Subtype Chassis ID Port ID Subtype Port ID Create Time Remain Time (sec)							

Figure 5-43 Voice VLAN LLDP-MED Device Window

# STP

This Switch supports three versions of the Spanning Tree Protocol: 802.1D-1998 STP, 802.1D-2004 Rapid STP, and 802.1Q-2005 MSTP. 802.1D-1998 STP will be familiar to most networking professionals. However, since 802.1D-2004 RSTP and 802.1Q-2005 MSTP have been recently introduced to D-Link managed Ethernet switches, a brief introduction to the technology is provided below followed by a description of how to set up 802.1D-1998 STP, 802.1D-2004 RSTP, and 802.1Q-2005 MSTP, 802.1D-2004 RSTP, and 802.1Q-2005 MSTP.

### 802.1Q-2005 MSTP

Multiple Spanning Tree Protocol, or MSTP, is a standard defined by the IEEE community that allows multiple VLANs to be mapped to a single spanning tree instance, which will provide multiple pathways across the network. Therefore, these MSTP configurations will balance the traffic load, preventing wide scale disruptions when a single spanning tree instance fails. This will allow for faster convergences of new topologies for the failed instance. Frames designated for these VLANs will be processed quickly and completely throughout interconnected bridges utilizing any of the three spanning tree protocols (STP, RSTP, or MSTP).

This protocol will also tag BPDU packets so receiving devices can distinguish spanning tree instances, spanning tree regions and the VLANs associated with them. An MSTI ID will classify these instances. MSTP will connect multiple spanning trees with a Common and Internal Spanning Tree (CIST). The CIST will automatically determine each MSTP region, its maximum possible extent and will appear as one virtual bridge that runs a single spanning tree. Consequentially, frames assigned to different VLANs will follow different data routes within administratively established regions on the network, continuing to allow simple and full processing of frames, regardless of administrative errors in defining VLANs and their respective spanning trees.

Each switch utilizing the MSTP on a network will have a single MSTP configuration that will have the following three attributes:

- A configuration name defined by an alphanumeric string of up to 32 characters (defined in the **MST Configuration Identification** window in the Configuration Name field).
- A configuration revision number (named here as a Revision Level and found in the **MST Configuration Identification** window) and;

• A 4094-element table (defined here as a VID List in the **MST Configuration Identification** window), which will associate each of the possible 4094 VLANs supported by the Switch for a given instance.

To utilize the MSTP function on the Switch, three steps need to be taken:

- The Switch must be set to the MSTP setting (found in the **STP Bridge Global Settings** window in the STP Version field)
- The correct spanning tree priority for the MSTP instance must be entered (defined here as a Priority in the **MSTI Config Information** window when configuring MSTI ID settings).
- VLANs that will be shared must be added to the MSTP Instance ID (defined here as a VID List in the **MST Configuration Identification** window when configuring an MSTI ID settings).

#### 802.1D-2004 Rapid Spanning Tree

The Switch implements three versions of the Spanning Tree Protocol, the Multiple Spanning Tree Protocol (MSTP) as defined by the IEEE 802.1Q-2005, the Rapid Spanning Tree Protocol (RSTP) as defined by the IEEE 802.1D-2004 specification and a version compatible with the IEEE 802.1D-1998 STP. RSTP can operate with legacy equipment implementing IEEE 802.1D-1998; however, the advantages of using RSTP will be lost.

The IEEE 802.1D-2004 Rapid Spanning Tree Protocol (RSTP) evolved from the 802.1D-1998 STP standard. RSTP was developed in order to overcome some limitations of STP that impede the function of some recent switching innovations, in particular, certain Layer 3 functions that are increasingly handled by Ethernet switches. The basic function and much of the terminology is the same as STP. Most of the settings configured for STP are also used for RSTP. This section introduces some new Spanning Tree concepts and illustrates the main differences between the two protocols.

### Port Transition States

An essential difference between the three protocols is in the way ports transition to a forwarding state and in the way, this transition relates to the role of the port (forwarding or not forwarding) in the topology. MSTP and RSTP combine the transition states disabled, blocking and listening used in 802.1D-1998 and creates a single state Discarding. In either case, ports do not forward packets. In the STP port transition states disabled, blocking or listening or in the RSTP/MSTP port state discarding, there is no functional difference, the port is not active in the network topology. Table 7-3 below compares how the three protocols differ regarding the port state transition.

All three protocols calculate a stable topology in the same way. Every segment will have a single path to the root bridge. All bridges listen for BPDU packets. However, BPDU packets are sent more frequently - with every Hello packet. BPDU packets are sent even if a BPDU packet was not received. Therefore, each link between bridges is sensitive to the status of the link. Ultimately, this difference results in faster detection of failed links, and thus faster topology adjustment. A drawback of 802.1D-1998 is this absence of immediate feedback from adjacent bridges.

802.1Q-2005 MSTP	802.1D-2004 RSTP	802.1D-1998 STP	Forwarding	Learning
Disabled	Disabled	Disabled	No	No
Discarding	Discarding	Blocking	No	No
Discarding	Discarding	Listening	No	No
Learning	Learning	Learning	No	Yes
Forwarding	Forwarding	Forwarding	Yes	Yes

RSTP is capable of a more rapid transition to a forwarding state - it no longer relies on timer configurations - RSTP compliant bridges are sensitive to feedback from other RSTP compliant bridge links. Ports do not need to wait for the topology to stabilize before transitioning to a forwarding state. In order to allow this rapid transition, the protocol introduces two new variables: the edge port and the point-to-point (P2P) port.

#### Edge Port

The edge port is a configurable designation used for a port that is directly connected to a segment where a loop cannot be created. An example would be a port connected directly to a single workstation. Ports that are designated as edge ports transition to a forwarding state immediately without going through the listening and learning states. An edge port loses its status if it receives a BPDU packet, immediately becoming a normal spanning tree port.

#### P2P Port

A P2P port is also capable of rapid transition. P2P ports may be used to connect to other bridges. Under RSTP/MSTP, all ports operating in full-duplex mode are considered to be P2P ports, unless manually overridden through configuration.

#### 802.1D-1998/802.1D-2004/802.1Q-2005 Compatibility

MSTP or RSTP can interoperate with legacy equipment and is capable of automatically adjusting BPDU packets to 802.1D-1998 format when necessary. However, any segment using 802.1D-1998 STP will not benefit from the rapid transition and rapid topology change detection of MSTP or RSTP. The protocol also provides for a variable used for migration in the event that legacy equipment on a segment is updated to use RSTP or MSTP.

The Spanning Tree Protocol (STP) operates on two levels:

- On the switch level, the settings are globally implemented.
- On the port level, the settings are implemented on a per-user-defined group of ports basis.

## **STP Global Settings**

This window is used to view and configure the STP global settings.

To view the following window, click L2 Features > STP > STP Global Settings, as shown below:

STP Global Settings				
STP State				
STP State	Disabled      Disabled			Apply
STP Traps				
STP New Root Trap	Disabled      Disabled			
STP Topology Change Trap	Disabled      Disabled			Apply
STP Mode				
STP Mode	RSTP			Apply
STP Priority				
Priority (0-61440)	32768			Apply
STP Configuration				
Bridge Max Age (6-40)	20 sec	Bridge Hello Time (1-2)	2 sec	
Bridge Forward Time (4-30)	15 sec	TX Hold Count (1-10)	6 times	
Max Hops (6-40)	20 times			Apply

The field that can be configured for **Spanning Tree State** is described below:

Parameter	Description
Spanning Tree State	Select this option to enable or disable the STP global state here.

Click the **Apply** button to accept the changes made.

The fields that can be configured for **STP Traps** are described below:

Parameter	Description			
STP New Root Trap	Select this option to enable or disable the STP new root trap option here.			
STP Topology Change Trap	Select this option to enable or disable the STP topology change trap option here.			

Click the **Apply** button to accept the changes made.

The fields that can be configured for **STP Mode** are described below:

Parameter	Description
STP Mode	Select the STP mode used here. Options to choose from are <b>MSTP</b> , <b>RSTP</b> , and <b>STP</b> .

Click the **Apply** button to accept the changes made.

The fields that can be configured for **Spanning Tree Priority** are described below:

Parameter	Description		
Priority	Select the STP priority value here. This value is between 0 and 61440. By default, this value is 32768. The lower the value, the higher the priority.		

Click the **Apply** button to accept the changes made.

The fields that can be configured for **Spanning Tree Configuration** are described below:

Parameter	Description
Bridge Max Age	Enter the bridge's maximum age value here. This value must be between 6 and 40 seconds. By default, this value is 20 seconds. The maximum age value may be set to ensure that old information does not endlessly circulate through redundant paths in the network, preventing the effective propagation of the new information. Set by the Root Bridge, this value will aid in determining that the Switch has spanning tree configuration values consistent with other devices on the bridged LAN.
Bridge Hello Time	After selecting <b>RSTP/STP</b> as the <b>STP Mode</b> , this parameter will be available. Enter the bridge's hello time value here. This value must be between 1 and 2 seconds. By default, this value is 2 seconds. This is the interval between two transmissions of BPDU packets sent by the Root Bridge to tell all other switches that it is indeed the Root Bridge. This field will only appear here when STP or RSTP is selected for the STP Version. For MSTP, the Hello Time must be set on a port per port basis.
Bridge Forward Time	Enter the bridge's forwarding time value here. This value must be between 4 and 30 seconds. By default, this value is 15 seconds. Any port on the Switch spends this time in the listening state while moving from the blocking state to the forwarding state.

Parameter	Description
TX Hold Count	Enter the transmit hold count value here. This value must be between 1 and 10 times. By default, this value is 6 times. This value is used to set the maximum number of Hello packets transmitted per interval.
Max Hops	Enter the maximum number of hops that are allowed. This value must be between 6 and 40 hops. By default, this value is 20 hops. This value is used to set the number of hops between devices in a spanning tree region before the BPDU (bridge protocol data unit) packet sent by the Switch will be discarded. Each switch on the hop count will reduce the hop count by one until the value reaches zero. The Switch will then discard the BDPU packet and the information held for the port will age out.

## **STP Port Settings**

This window is used to view and configure the STP port settings.

To view the following window, click L2 Features > STP >	STP Port Settings, as shown below:
---	------------------------------------

STP Port Set	tings	_	_	_	_	_	_	_
STP Port Setting	IS							
Unit		1	✓ From Port	eth1/0/1	✓ To Port	eth1/0/1 🗸	]	
Cost (1-2000000	000, 0=Auto)		State	Enabled	✓ Guard Root	Disabled 🗸	]	
Link Type		Auto	✓ Port Fast	Network	✓ TCN Filter	Disabled V		
BPDU Forward		Disabled	✓ Priority	128	✓ Hello Time (1-2)		sec	Apply
Unit 1 Settings								
Port	State	Cost	Guard Root	Link Type	Port Fast	TCN Filter	BPDU Forward	Priority
eth1/0/1	Enabled	0/200000	Disabled	Auto/P2P	Edge/Non-Edge	Disabled	Disabled	128
eth1/0/2	Enabled	0/200000	Disabled	Auto/P2P	Edge/Non-Edge	Disabled	Disabled	128
eth1/0/3	Enabled	0/200000	Disabled	Auto/P2P	Edge/Non-Edge	Disabled	Disabled	128
eth1/0/4	Enabled	0/200000	Disabled	Auto/P2P	Edge/Non-Edge	Disabled	Disabled	128
eth1/0/5	Enabled	0/200000	Disabled	Auto/P2P	Edge/Non-Edge	Disabled	Disabled	128
eth1/0/6	Enabled	0/200000	Disabled	Auto/P2P	Edge/Non-Edge	Disabled	Disabled	128
eth1/0/7	Enabled	0/200000	Disabled	Auto/P2P	Edge/Non-Edge	Disabled	Disabled	128
eth1/0/8	Enabled	0/200000	Disabled	Auto/P2P	Edge/Non-Edge	Disabled	Disabled	128
eth1/0/9	Enabled	0/200000	Disabled	Auto/P2P	Edge/Non-Edge	Disabled	Disabled	128
eth1/0/10	Enabled	0/200000	Disabled	Auto/P2P	Edge/Non-Edge	Disabled	Disabled	128

Figure 5-45 STP Port Settings Window

The fields that can be configured are described below:

Parameter	Description	
Unit	Select the switch unit that will be used for this configuration here.	
From Port / To Port	Select the appropriate port range used for the configuration here.	
Cost	Enter the cost value here. This value must be between 1 and 200000000. This value defines a metric that indicates the relative cost of forwarding packets to the specified port list. Port cost can be set automatically or as a metric value. The default value is <b>0</b> (auto). Setting 0 for the external cost will automatically set the speed for forwarding packets to the specified port(s) in the list for optimal efficiency. The default port cost for a 100Mbps port is 200000 and the default port cost for a Gigabit port is 20000. The lower the number, the greater the probability the port will be chosen to forward packets.	
State	Select to enable or disable the STP port state.	

Parameter	Description	
Guard Root	Select to enable or disable the guard root function.	
Link Type	Select the link type option here. Options to choose from are <b>Auto</b> , <b>P2P</b> , and <b>Shared</b> . A full-duplex port is considered to have a point- to-point ( <b>P2P</b> ) connection. On the opposite, a half-duplex port is considered to have a <b>Shared</b> connection. The port cannot transit into the forwarding state rapidly by setting the link type to <b>Shared</b> . By default, this option is <b>Auto</b> .	
Port Fast	Select the port fast option here. Options to choose from are:	
	<ul> <li>Network - The port remains in the non-port-fast state for three seconds. The port will change to the port-fast state if no BPDU is received and changes to the forwarding state. If the port received the BPDU later, it will change to the non-port-fast state. This is the default option.</li> <li>Disabled - The port is always in the non-port-fast state. It wil always wait for the forward-time delay to change to the forwarding state.</li> <li>Edge - The port directly changes to the spanning-tree forwarding state when a link-up occurs without waiting for the forward-time delay. If the interface receives a BPDU later, its operation state changes to the non-port-fast state.</li> </ul>	
TCN Filter	Select to enable or disable the TCN filter option. Enabling TC filtering on a port is useful for an ISP to prevent the external bridge to a core region of the network, causing address flushing in that region, possibly, because those bridges are not under the full control of the administrator. When a port is set to the TCN filter mode, the TC event received by the port will be ignored. By default, this option is <b>Disabled</b> .	
BPDU Forward	Select to enable or disable BPDU forwarding. If enabled, the received STP BPDU will be forwarded to all VLAN member ports in the untagged form. By default, this option is <b>Disabled</b> .	
Priority	Select the priority value here. Options to choose from are <b>0</b> to <b>240</b> . By default, this option is <b>128</b> . A lower value has higher priority.	
Hello Time	Enter the hello time value here. This value must be between 1 and 2 seconds. This value specifies the interval that a designated port will wait between the periodic transmissions of each configuration message.	

# **MST Configuration Identification**

This window is used to view and configure the MST configuration identification settings. These settings will uniquely identify a multiple spanning tree instance set on the Switch. The Switch initially

possesses one CIST, or Common Internal Spanning Tree, of which the user may modify the parameters for but cannot change the MSTI ID for, and cannot be deleted.

To view the following window, click **L2 Features > STP > MST Configuration Identification**, as shown below:

MST Configuration Identifica	tion		
MST Configuration Identification			
Configuration Name	3C:1E:04:A1:B9:E0		
Revision Level (0-65535)	0		
Digest	AC36177F50283CD4B83821D8AB26DE62		Apply
Instance ID Settings			
Instance ID (1-16)			
Action	Add VID		
VID List	1 or 3-5		Apply
Total Entries: 1			
Instance ID		VID List	
CIST		1-4094	Edit Delete
			1/1 < < 1 > > Go

Figure 5-46 MST Configuration Identification Window

The fields that can be configured for **MST Configuration Identification** are described below:

Parameter	Description	
Configuration Name	Enter the MST This name uniquely identifies the MSTI (Multiple Spanning Tree Instance). If a Configuration Name is not set, this field will show the MAC address to the device running MSTP.	
Revision Level	Enter the revision level value here. This value must be between 0 and 65535. By default, this value is 0. This value, along with the Configuration Name, identifies the MSTP region configured on the Switch.	

Click the **Apply** button to accept the changes made.

The fields that can be configured for Instance ID Settings are desc	ribed below:
---	--------------

Parameter	Description	
Instance ID         Enter the instance ID here. This value must be between		
Action	Select the action that will be taken here. Options to choose from are <b>Add VID</b> and <b>Remove VID</b> .	
VID List	Enter the VID list value here. This field is used to specify the VID range from configured VLANs set on the Switch.	

Click the **Apply** button to accept the changes made.

Click the Edit button to re-configure the specific entry.

Click the **Delete** button to remove the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **STP Instance**

This window is used to view and configure the STP instance settings.

To view the following window, click L2 Features > STP > STP Instance, as shown below:

Instance	Instance State	Instance Priority	
CIST	Disabled	32768(32768 sysid 0)	Edit
			1/1  < < 1 > >
ance CIST			
			CIST Global Info[Mode RSTP]
Bridge Address			00-01-02-03-04-00
	Designated Root Address / Priority		00-00-00-00-00 / 0
l			
	gional Root Bridge Address / Priority		00-00-00-00-00 / 0

Figure 5-47 STP Instance Window

Click the Edit button to re-configure the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **MSTP Port Information**

This window is used to view and configure the MSTP port information settings.

To view the following window, click L2 Features > STP > MSTP Port Information, as shown below:

STP Port Information	on				
Unit 1	Port eth1/0/1	×			Clear Detected Protocol Find
Instance ID	Cost	Priority	Status	Role	
CIST	200000	128	Forwarding	NonStp	Edit
					1/1  < < 1 > >  Go

Figure 5-48 MSTP Port Information Window

The fields that can be configured are described below:

Parameter	Description	
Unit	Select the switch unit that will be used for this configuration here.	
Port         Select the port number that will be cleared here.		

Click the Clear Detected Protocol button to clear the detected protocol settings for the port selected.

Click the Find button to locate a specific entry based on the information entered.

Click the Edit button to re-configure the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

# ERPS (G.8032)

For more information, refer to Appendix E - ERPS Information.

## ERPS

This window is used to view and configure Ethernet Ring Protection Switching (ERPS) settings.

To view the following window, click L2 Features > ERPS (G.8032) > ERPS, as shown below:

	ERPS					
Г	Ethernet Ring G.8032					
	Ring Name 32 chars	S	Apply			
	Total Entries: 1					
	Ethernet Ring	Instance ID				
	Ring	1	Edit Ring Edit Instance Show Status Delete			
			1/1 < 1 > > Go			

Figure 5-49 ERPS Window

The fields that can be configured are described below:

Parameter	Description
Ring Name	Enter the Ethernet Ring Protection (ERP) instance's name here. This name can be up to 32 characters long.

Click the Apply button to create an ITU-T G.8032 ERP physical ring.

Click the **Edit Ring** button to modify an ITU-T G.8032 ERP physical ring.

Click the **Edit Instance** button to configure the ERP instance.

Click the Show Status button to view the ITU-T G.8032 ERP physical ring's status information.

Click the **Delete** button to delete the specified ITU-T G.8032 ERP physical ring.

After click the Edit Ring button, the following window will appear.

Edit Ethernet Ring		
Ethernet Ring Settings		
Ethernet Ring Name	Ring	
Instance ID (1-32)	None  Specify	
Sub Ring Name	32 chars None  Specify	
Port0	1 eth1/0/1 None Specify	
Port1	1 None None Specify	
		Back Apply

Figure 5-50 ERPS (Edit Ring) Window

The fields that can be configured are described below:

Parameter	Description
Instance ID	Select the checkbox and enter the ERP instance number here. This value must be between 1 and 32. Select the <b>Specify</b> radio button to configure this parameter as per normal. Select the <b>None</b> radio button to revert this parameter to the default setting.
Sub Ring Name	Select the checkbox and enter the physical ring's sub-ring name here. This name can be up to 32 characters long. Select the <b>Specify</b> radio button to configure this parameter as per normal.

Parameter	Description
	Select the <b>None</b> radio button to revert this parameter to the default setting.
Port0	Select the checkbox and then select the switch's unit ID and the port number that will be the first ring port of the physical ring. Select the <b>Specify</b> radio button to configure this parameter as per normal. Select the <b>None</b> radio button to revert this parameter to the default setting.
Port1	Select the checkbox and then select the switch's unit ID and the port number that will be the second ring port of the physical ring. Select the <b>None</b> option, from the drop-down menu, specifies that the inter-connected node is a local node endpoint of an open ring. Select the <b>Specify</b> radio button to configure this parameter as per normal. Select the <b>None</b> radio button to revert this parameter to the default setting.

Click the **Back** button to discard the changes made and return to the previous window.

Click the **Apply** button to accept the changes made.

After click the **Edit Instance** button, the following window will appear.

Edit Ethernet Instance	
Ethernet Instance Settings	
Ethernet Ring Name	Ring
Instance ID	1
Description	64 chars ONone OSpecify
R-APS Channel VLAN (1-4094)	None Specify
Inclusion VLAN List	1,3-5 ONone OSpecify
MEL (0-7)	1 None Specify
Profile Name	32 chars ONone OSpecify
RPL Port	Port0
RPL Owner	Disabled 🔽 🗆
Activate	Disabled 🔽 🗆
	Back Apply

Parameter	Description
Description	Select the checkbox and enter the ERP instance's description here. This description can be up to 64 characters long. Select the <b>Specify</b> radio button to configure this parameter as per normal. Select the <b>None</b> radio button to revert this parameter to the default setting.
R-APS Channel VLAN	Select the checkbox and enter the R-APS channel VLAN's ID for the ERP instance here. The APS channel VLAN of a sub-ring instance is also the virtual channel of the sub-ring. This value must be between 1 and 4094. Select the <b>Specify</b> radio button to configure this parameter as per normal. Select the <b>None</b> radio button to revert this parameter to the default setting.
Inclusion VLAN List	Select the checkbox and enter the inclusion VLAN list here. A range is identified when a hyphen (-) is used. For example, VLANs 1 to 5 can be entered as 1-5. A list is identified when commas (,) are used. For example, use VLANs 1,3,5. The VLANs specified here will be protected by the ERP mechanism. Select the <b>Specify</b> radio button to configure this parameter as per normal. Select the <b>None</b> radio button to revert this parameter to the default setting.

The fields that can be configured are described below:

Parameter	Description
MEL	Select the checkbox and enter the ring MEL value of the ERP instance here. This value must be between 0 and 7. The configured MEL value of all ring nodes that participate in the same ERP instance should be identical. Select the <b>Specify</b> radio button to configure this parameter as per normal. Select the <b>None</b> radio button to revert this parameter to the default setting.
Profile Name	Select the checkbox and enter the G.8032 profile's name here that will be associated with this ERP instance. Multiple ERP instances can be associated with the same G.8032 profile. The instances associated with the same profile protect the same set of VLANs, or the VLANs protected by one instance are a subset of LANs protected by another instance. This name can be up to 32 characters long. Select the <b>Specify</b> radio button to configure this parameter as per normal. Select the <b>None</b> radio button to revert this parameter to the default setting.
RPL Port	Select the checkbox and then select the RPL port option here. Options to choose from are <b>Port0</b> and <b>Port1</b> . The option selected will be configured as the RPL port.
RPL Owner	Select the checkbox and then select whether this node is the RPL owner or neighbor. Options to choose from are <b>Enabled</b> and <b>Disabled</b> . Enabling this option will specify this RPL as an owner.
Activate	Select the checkbox and then select whether or not to active this ERP instance. Options to choose from are <b>Enabled</b> and <b>Disabled</b> . Enabling this option will active this ERP instance.

Click the **Back** button to discard the changes made and return to the previous window.

Click the **Apply** button to accept the changes made.

After click the **Show Status** button, the following window will appear.

RPS Status	
ERPS Status Information	
Ethernet Ring	Ring
Instance ID	1
Description

Figure 5-52 ERPS (Show Status) Window

Click the **Back** button to return to the previous window.

## **ERPS Profile**

This window is used to view and configure the Ethernet Ring G.8032 profile settings.

To view the following window, click L2 Features > ERPS (G.8032) > ERPS Profile, as shown below:

ernet Ring G.8032 Profile					
Profile Name 32 chars Delete					
otal Entries: 1					
Profile	Instance ID	Status	Port State		
Desfile	1	Destantion	P0:eth1/0/20,-(RPL)		<b>E</b> 19
Profile	1	Protection	P1:eth1/0/21,-		Edit
Profile	1	Protection	P1:eth1/0/21,-	1/1	Edit

The fields that can be configured are described below:

Parameter	Description
Profile Name	Enter the G.8032 profile's name here. This name can be up to 32 characters long. Multiple ERP instances can be associated with the same G.8032 profile. The instances associated with the same profile protect the same set of VLANs, or the VLANs protected by one instance are a subset of LANs protected by another instance.

Click the **Apply** button to associate the G.8032 profile with the ERP instance created.

Click the **Delete** button to disassociate the G.8032 profile based on the **Profile Name** entered.

Click the Edit button to modify the specified G.8032 profile.

After click the Edit button, the following window will appear.

Edit Ethernet Profile		
Ethernet Profile Settings		
Profile Name	Profile	
TCN Propagation	Disabled 🔽	
Revertive	Enabled	
Guard Timer (10-2000)	500 ms 🗌	
Hold-Off Timer (0-10000)	0 ms 🗌	
WTR Timer (1-12)	5 min 🗌	
		Back Apply

Figure 5-54 ERPS Profile (Edit) Window

The fields that can be configured are described below:

Parameter	Description
TCN Propagation	Select the checkbox and then select the TCN propagation state. Options to choose from are <b>Enable</b> and <b>Disabled</b> . This function is used to enable the propagation of the topology change notifications from the sub-ERP instance to the major instance.
Revertive	Select the checkbox and then select the revertive state. Options to choose from are <b>Enable</b> and <b>Disabled</b> . This function is used to revert back to the working transport entity, for example, when the RPL was blocked.

Parameter	Description
Guard Timer	Select the checkbox and enter the guard timer value here. This value must be between 10 and 2000 milliseconds. By default, this value is 500 milliseconds.
Hold-Off Timer	Select the checkbox and enter hold-off timer value here. This value must be between 0 and 10000 milliseconds. By default, this value is 0 milliseconds.
WTR Timer	Select the checkbox and enter the WTR timer value here. This value must be between 1 and 12 minutes. By default, this value is 5 minutes.

Click the **Back** button to discard the changes made and return to the previous window.

Click the **Apply** button to accept the changes made.

# **Loopback Detection**

The Loopback Detection (LBD) function is used to detect the loop created by a specific port. This feature is used to temporarily shut down a port on the Switch when a CTP (Configuration Testing Protocol) packet has been looped back to the Switch. When the Switch detects CTP packets received from a port or a VLAN, this signifies a loop on the network. The Switch will automatically block the port or the VLAN and send an alert to the administrator. The Loopback Detection function can be implemented on a range of ports at a time. The user may enable or disable this function using the drop-down menu.

To view the following window, click **L2 Features > Loopback Detection**, as shown below:

Loopback Detection		_	_	_		
Loopback Detection Global Settings						
Loopback Detection State Enabled VLAN ID List Trap State	Enabled V 1-4094 Disabled V	Mode Interval (1-32767) Action	Port-based 10 Shutdown	sec		
Address Type	Multicast 🗸	Function Version	v4.07		Apply	
Loopback Detection Port Settin	ngs From Port eth1/0/1	V To Port	eth1/0/1	State Disa	abled 🔽	
Port	Loopback Det	ection State	Result	Time Left (se	c)	
eth1/0/1	Enab	led	Normal	-		
eth1/0/2	Enab	led	Normal	-		
eth1/0/3	Enab	led	Normal	-		
eth1/0/4	Enab	led	Normal	-		
eth1/0/5	Enab	led	Normal			
eth1/0/6	Enab	led	Normal	-		
eth1/0/7	Enab	led	Normal	-		
eth1/0/8	Enab	led	Normal	-		

Figure 5-55 Loopback Detection Window

The fields that can be configured for Loopback Detection Global Settings are described below:

Parameter	Description	
Loopback Detection State	Select to enable or disable loopback detection. The default is <b>Disabled</b> .	
Mode	Select the loopback detection mode. Options to choose from are <b>Port-based</b> and <b>VLAN-based</b> .	
Enable VLAN ID List	Enter the VLAN ID for loop detection. This only takes effect when the <b>VLAN-based</b> is selected in the <b>Mode</b> drop-down list.	

Parameter	Description
Interval	Enter the interval in seconds that the device will transmit all the CTP (Configuration Test Protocol) packets to detect a loop-back event. The valid range is from 1 to 32767 seconds. The default setting is 10 seconds.
Traps State	Select to enable or disable the loopback detection trap state.
Action	<ul> <li>Select the action that will be taken here. Options to choose from are:</li> <li>Shutdown - Specifies that when a loop was detected, the port will be shut down (disabled) in the port-based mode. Traffic will be blocked on the specific VLAN in the VLAN-based mode.</li> <li>None - Specifies that when a loop was detected, the port will not be disabled in the port-based mode. Traffic will not be block on the specific VLAN in the VLAN-based mode.</li> <li>None - Specifies that when a loop was detected, the port will not be disabled in the port-based mode. Traffic will not be block on the specific VLAN in the VLAN-based mode. Only log and trap messages will be sent.</li> </ul>
Address Type	<ul> <li>Select the address type here. This is used to configure the destination address type in LBD packets for loopback detection. Options to choose from are:         <ul> <li>Multicast - Specifies that only multicast LBD packet will be sent. The destination address is CF-00-00-00-00.</li> <li>Broadcast - Specifies that only broadcast LBD packet will be sent. The destination address is FF-FF-FF-FF-FF.</li> </ul> </li> </ul>

The fields that can be configured for Loopback Detection Port Settings are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
State	Select this option to enable or disable the state of the port.

Click the **Apply** button to accept the changes made.

# **Link Aggregation**

### Understanding Port Trunk Groups

Port trunk groups are used to combine a number of ports together to make a single high-bandwidth data pipeline. The Switch supports up to 32 port trunk groups with 1 to 8 ports in each group.

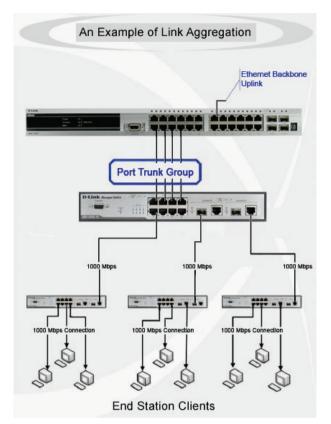

Figure 5-56 Example of Port Trunk Group

The Switch treats all ports in a trunk group as a single port. Data transmitted to a specific host (destination address) will always be transmitted over the same port in a trunk group. This allows packets in a data stream to arrive in the same order they were sent.

Link aggregation allows several ports to be grouped together and to act as a single link. This gives a bandwidth that is a multiple of a single link's bandwidth.

Link aggregation is most commonly used to link a bandwidth intensive network device or devices, such as a server, to the backbone of a network.

The Switch allows the creation of up to 32 link aggregation groups, each group consisting of 1 to 8 links (ports). Each port can only belong to a single link aggregation group.

All of the ports in the group must be members of the same VLAN, and their STP status, static multicast, traffic control; traffic segmentation and 802.1p default priority configurations must be identical. Port locking and 802.1X must not be enabled on the trunk group. Further, the LACP aggregated links must all be of the same speed and should be configured as full duplex.

Load balancing is automatically applied to the ports in the aggregated group, and a link failure within the group causes the network traffic to be directed to the remaining links in the group.

The Spanning Tree Protocol will treat a link aggregation group as a single link, on the switch level. On the port level, the STP will use the port parameters of the Master Port in the calculation of port cost and in determining the state of the link aggregation group. If two redundant link aggregation groups are configured on the Switch, STP will block one entire group; in the same way STP will block a single port that has a redundant link.

**NOTE:** If any ports within the trunk group become disconnected, packets intended for the disconnected port will be load shared among the other linked ports of the link aggregation group.

This window is used to view and configure the link aggregation settings.

To view the following window, click L2 Features > Link Aggregation, as shown below:

Link Aggregation	_	_		
System Priority (1-65535) Load Balance Algorithm System ID	32768 Source Destinat 32768,3C-1E-04-A			Apply Apply
Unit       From Port       To Port       Group ID (1-32)       Mode         1 v       eth1/0/1 v       eth1/0/1 v       On       Add       Delete Member Port         Note: Each Channel Group supports up to 8 member ports.				
Total Entries: 1				
Channel Group	Protocol Max Ports	Member Number	Member Ports	
Port-channel1	Static 8	4	1/0/10-1/0/13	Delete Channel Channel Detail

Figure 5-57 Link Aggregation Window

The fields that can be configured for Link Aggregation are described below:

Parameter	Description
System Priority	Enter the system's priority value used here. This value must be between 1 and 65535. By default, this value is 32768. The system priority determines which ports can join a port-channel and which ports are put in the stand-alone mode. The lower value has a higher priority. If two or more ports have the same priority, the port number determines the priority.
Load Balance Algorithm	Select the load-balancing algorithm that will be used here. Options to choose from are <b>Source MAC</b> , <b>Destination MAC</b> , <b>Source Destination MAC</b> , <b>Source IP</b> , <b>Destination IP</b> , and <b>Source Destination IP</b> . By default, this option is <b>Source MAC</b> .

Click the **Apply** button to accept the changes made.

The fields that can be configured for **Channel Group Information** are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Group ID	Enter the channel group number here. This value must be between 1 and 32. The system will automatically create the port-channel when a physical port first joins a channel group. An interface can only join one channel-group.
Mode	Select the mode option here. Options to choose from are <b>On</b> , <b>Active</b> , and <b>Passive</b> . If the mode <b>On</b> is specified, the channel

Parameter	Description
	group type is static. If the mode <b>Active</b> or <b>Passive</b> is specified, the channel group type is LACP. A channel group can only consist of either static members or LACP members. Once the type of channel group has been determined, other types of interfaces cannot join the channel group.

Click the **Add** button to add a new entry based on the information entered.

Click the **Delete Member Port** button to remove the specific member port.

Click the **Delete Channel** button to remove the specific entry.

Click the **Channel Detail** button to view detailed information about the channel.

### After clicking the **Channel Detail** button, the following page will be available.

### The fields that can be configured for **Port Channel Description** are described below:

Parameter	Description
Description	Enter the description for the port channel here. This can be up to 64 characters long.

Click the **Apply** button to accept the changes made.

Click the **Delete Description** button to clear the setting in the corresponding Description field.

Click the Edit button to re-configure the specific entry.

Click the **Back** button to return to the previous window.

# **L2 Multicast Control**

## **IGMP Snooping**

Internet Group Management Protocol (IGMP) snooping allows the Switch to recognize IGMP queries and reports sent between network stations or devices and an IGMP host.

### **IGMP Snooping Settings**

In order to use IGMP Snooping it must first be enabled for the entire Switch under IGMP Global Settings at the top of the window. You may then fine-tune the settings for each VLAN by clicking the corresponding **Edit** button. When enabled for IGMP snooping, the Switch can open or close a port to a specific multicast group member based on IGMP messages sent from the device to the IGMP host or vice versa. The Switch monitors IGMP messages and discontinues forwarding multicast packets when there are no longer hosts requesting that they continue.

To view the following window, click L2 Features > L2 Multicast Control > IGMP Snooping > IGMP Snooping Settings, as shown below:

GMP Snooping Settings			
Global Settings

Query Interval	125 seconds
Max Response Time	10 seconds
Robustness Value	2
Last Member Query Interval	1 seconds
Proxy Reporting	Disabled Source Address (0.0.0.0)
	Modify

Figure 5-60 IGMP Snooping VLAN Parameters Window

The window displays the detail information about IGMP snooping VLAN. Click the **Modify** button to edit the information in the following window.

After clicking the **Modify** or **Edit** button in IGMP Snooping Settings window, the following window will appear.

IGMP Snooping VLAN Settin	ngs
/ IGMP Snooping VLAN Settings	
VID (1-4094)	1
Status	Enabled      Disabled
Minimum Version	1 •
Fast Leave	Enabled Disabled
Report Suppression	Enabled  Disabled
Suppression Time (1-300)	10
Querier State	Enabled  Disabled
Query Version	3 •
Query Interval (1-31744)	125 sec
Max Response Time (1-25)	10 sec
Robustness Value (1-7)	2
Last Member Query Interval (1-25)	1 sec
Proxy Reporting	Enabled Disabled Source Address
	Apply

Figure 5-61 IGMP Snooping VLAN Settings Window

The fields that can be configured are described below:

Parameter	Description
Minimum Version	Select the minimum version of IGMP hosts that is allowed on the VLAN.
Fast Leave	Select this option to enable or disable the IGMP snooping fast leave function. If enabled, the membership is immediately removed when the system receive the IGMP leave message.
Report Suppression	Select this option to enable or disable the report suppression. The report suppression function only works for IGMPv1 and IGMPv2 traffic. When report suppression is enabled, the Switch suppresses the duplicate reports sent by hosts. The suppression for the same group report or leave will continue until the suppression time expired. For report or leave messages to the same group, only one report or leave message is forwarded. The remaining report and leave messages are suppressed.
Suppression Time	Enter the interval of suppressing duplicate IGMP reports or leaves. The range is from 1 to 300.
Querier State	Select this option to enable or disable the querier state.
Query Version	Select the general query packet version sent by the IGMP snooping querier. Options to choose from are <b>1</b> , <b>2</b> , and <b>3</b> .
Query Interval	Enter the interval at which the IGMP snooping querier sends IGMP general query messages periodically.
Max Response Time	Enter the maximum response time, in seconds, advertised in IGMP snooping queries. The range is 1 to 25.
Robustness Value	Enter the robustness variable used in IGMP snooping.
Last Member Query Interval	Enter the interval at which the IGMP snooping querier sends IGMP group-specific or group-source-specific (channel) query messages.
Proxy Reporting	Select this option to enable or disable the proxy-reporting function.
Source Address	Enter the source IP of proxy reporting. This is available when <b>Enabled</b> is selected in <b>Proxy Reporting</b> .

Click the **Apply** button to accept the changes made.

### **IGMP Snooping Groups Settings**

This window is used to configure and view the IGMP snooping static group, and view IGMP snooping group.

To view the following window, click L2 Features > L2 Multicast Control > IGMP Snooping > IGMP Snooping Groups Settings, as shown below:

The fields that can be configured for IGMP Snooping Mrouter Settings are described below:

Parameter	Description	
VID	Enter a VLAN ID between 1 and 4094.	
Configuration	Select the port configuration. Options to choose from are:	
	<ul> <li>Port - Select to have the configured ports to be static multicast router ports.</li> <li>Forbidden Port - Select to have the configured ports not to be multicast router ports.</li> </ul>	
Unit	Select the switch unit that will be used for this configuration here.	
From Port / To Port	Select the appropriate port range used for the configuration here.	

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

The fields that can be configured for IGMP Snooping Mrouter Table are described below:

Parameter	Description
VID	Enter a VLAN ID between 1 and 4094.

Click the **Find** button to locate a specific entry based on the information entered.

Click the Find All button to view all the entries.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **IGMP Snooping Statistics Settings**

This window is used to clear and display the IGMP snooping related statistics.

To view the following window, click L2 Features > L2 Multicast Control > IGMP Snooping > IGMP Snooping Statistics Settings, as shown below:

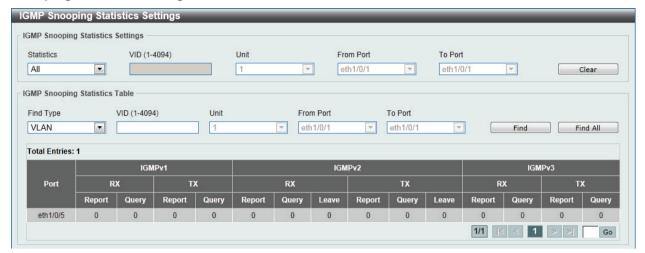

Figure 5-64 IGMP Snooping Statistics Settings Window

Parameter	Description
Statistics	Select the interface here. Options to choose from are <b>AII</b> , <b>VLAN</b> , and <b>Port</b> .
VID	Enter a VLAN ID between 1 and 4094. This is available when <b>VLAN</b> is selected in the <b>Statistics</b> drop-down list.
Unit	Select the switch unit that will be used for this configuration here. This is available when <b>Port</b> is selected in the <b>Statistics</b> drop-down list.
From Port / To Port	Select the appropriate port range used for the configuration here. This is available when <b>Port</b> is selected in the <b>Statistics</b> drop-down list.

The fields that can be configured for IGMP Snooping Statistics Settings are described below:

Click the **Clear** button to clear the IGMP snooping related statistics.

The fields that can be configured for IGMP Snooping Statistics Table are described below:

Parameter	Description
Find Type	Select the interface type. Options to choose from are VLAN, and Port.
VID	Enter a VLAN ID between 1 and 4094. This is available when <b>VLAN</b> is selected in the <b>Find Type</b> drop-down list.
Unit	Select the switch unit that will be used for this configuration here. This is available when <b>Port</b> is selected in the <b>Find Type</b> drop-down list.
From Port / To Port	Select the appropriate port range used for the configuration here. This is available when <b>Port</b> is selected in the <b>Find Type</b> drop-down list.

Click the **Find** button to locate a specific entry based on the information entered.

Click the **Find All** button to view all the entries.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## MLD Snooping

Multicast Listener Discovery (MLD) Snooping is an IPv6 function used similarly to IGMP snooping in IPv4. It is used to discover ports on a VLAN that are requesting multicast data. Instead of flooding all ports on a selected VLAN with multicast traffic, MLD snooping will only forward multicast data to ports that wish to receive this data through the use of queries and reports produced by the requesting ports and the source of the multicast traffic.

MLD snooping is accomplished through the examination of the layer 3 part of an MLD control packet transferred between end nodes and a MLD router. When the Switch discovers that this route is requesting multicast traffic, it adds the port directly attached to it into the correct IPv6 multicast table, and begins the process of forwarding multicast traffic to that port. This entry in the multicast routing table records the port, the VLAN ID, and the associated multicast IPv6 multicast group address, and then considers this port to be an active listening port. The active listening ports are the only ones to receive multicast group data.

### MLD Control Messages

Three types of messages are transferred between devices using MLD snooping. These three messages are all defined by four ICMPv6 packet headers, labeled 130, 131, 132, and 143.

- **Multicast Listener Query** Similar to the IGMPv2 Host Membership Query for IPv4, and labeled as 130 in the ICMPv6 packet header, this message is sent by the router to ask if any link is requesting multicast data. There are two types of MLD query messages emitted by the router. The General Query is used to advertise all multicast addresses that are ready to send multicast data to all listening ports, and the Multicast Specific query, which advertises a specific multicast address that is also ready. These two types of messages are distinguished by a multicast destination address located in the IPv6 header and a multicast address in the Multicast Listener Query Message.
- **Multicast Listener Report**, **Version 1** Comparable to the Host Membership Report in IGMPv2, and labeled as 131 in the ICMP packet header, this message is sent by the listening port to the Switch stating that it is interested in receiving multicast data from a multicast address in response to the Multicast Listener Query message.
- **Multicast Listener Done** Akin to the Leave Group Message in IGMPv2, and labeled as 132 in the ICMPv6 packet header, this message is sent by the multicast listening port stating that it is no longer interested in receiving multicast data from a specific multicast group address, therefore stating that it is "done" with the multicast data from this address. Once this message is received by the Switch, it will no longer forward multicast traffic from a specific multicast group address group address to this listening port.
- **Multicast Listener Report**, **Version 2** Comparable to the Host Membership Report in IGMPv3, and labeled as 143 in the ICMP packet header, this message is sent by the listening port to the Switch stating that it is interested in receiving multicast data from a multicast address in response to the Multicast Listener Query message.

### **MLD Snooping Settings**

This window is used to configure the MLD snooping settings.

To view the following window, click L2 Features > L2 Multicast Control > MLD Snooping > MLD Snooping Settings, as shown below:

Figure 5-69 MLD Snooping Mrouter Settings Window

The fields that can be configured for MLD Snooping Mrouter Settings are described below:

Parameter	Description
VID	Enter a VLAN ID between 1 and 4094.
Configuration	Select the port configuration. Options to choose from are:
	<ul> <li>Port - Select to have the configured ports as being connected to multicast-enabled routers.</li> <li>Forbidden Port - Select to have the configured ports as being not connected to multicast-enabled routers.</li> <li>Learn pimv6 - Select to enable dynamic learning of multicast router port.</li> </ul>
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

The fields that can be configured for MLD Snooping Mrouter Table are described below:

Parameter	Description
VID	Enter a VLAN ID between 1 and 4094.

Click the **Find** button to locate a specific entry based on the information entered.

Click the Find All button to view all the entries.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **MLD Snooping Statistics Settings**

This window is used to clear and display the MLD snooping related statistics.

To view the following window, click L2 Features > L2 Multicast Control > MLD Snooping > MLD Snooping Statistics Settings, as shown below:

tatistics	VID (1-4094)		Unit	From	m Port	To Port

Figure 5-70 MLD Snooping Statistics Settings Window

The fields that can be configured for MLD Snooping Statistics Settings are described below:

Parameter	Description
Statistics	Select the interface here. Options to choose from are <b>AII</b> , <b>VLAN</b> , and <b>Port</b> .

Parameter	Description			
VID	Enter a VLAN ID between 1 and 4094. This is available when <b>VLAN</b> is selected in the <b>Statistics</b> drop-down list.			
Unit	Select the switch unit that will be used for this configuration here. This is available when <b>Port</b> is selected in the <b>Statistics</b> drop-down list.			
From Port / To Port	Select the appropriate port range used for the configuration here. This is available when <b>Port</b> is selected in the <b>Statistics</b> drop-down list.			

Click the Clear button to clear the MLD snooping related statistics.

The fields that can be configured for MLD Snooping Statistics Table are described below:

Parameter	Description
Find Type	Select the interface type. Options to choose from are VLAN, and Port.
VID	Enter a VLAN ID between 1 and 4094. This is available when <b>VLAN</b> is selected in the <b>Find Type</b> drop-down list.
Unit	Select the switch unit that will be used for this configuration here. This is available when <b>Port</b> is selected in the <b>Find Type</b> drop-down list.
From Port / To Port	Select the appropriate port range used for the configuration here. This is available when <b>Port</b> is selected in the <b>Find Type</b> drop-down list.

Click the Find button to locate a specific entry based on the information entered.

Click the Find All button to view all the entries.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **Multicast Filtering**

This window is used to view and configure the Layer 2 multicast filtering settings.

To view the following window, click L2 Features > L2 Multicast Control > Multicast Filtering, as shown below:

Aulticast Filte				
VID List	3 or 1-5	Multicast Filter Mode	Forward Unregistered 💌	Apply
Total Entries: 1				
	VLAN		Multicast Filter Mod	e
	default		Forward Unregistered Gr	oups
			1/1	< 1 > > ] Go

The fields that can be configured are described below:

Parameter	Description
VID List	Enter the VLAN ID list that will be used for this configuration here.
Multicast Filter Mode	Select the multicast filter mode here. Options to choose from are:

Parameter	Description
	<ul> <li>Forward Unregistered - Specifies that registered multicast packets will be forwarded based on the forwarding table and all unregistered multicast packets will be flooded based on the VLAN domain.</li> <li>Forward All - Specifies that all multicast packets will be flooded based on the VLAN domain.</li> <li>Filter Unregistered - Specifies that registered packets will be forwarded based on the forwarding table and all unregistered multicast packets will be forwarded based on the forwarding table and all unregistered multicast packets will be filtered.</li> </ul>

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

# LLDP

# **LLDP Global Settings**

This window is used to configure the LLDP global settings.

To view the following window, click L2 Features > LLDP > LLDP Global Settings, as shown below:

LLDP Global Settings		
LLDP Global Settings		
LLDP State	OEnabled     OEnabled

Software Revision	1.70.007	
Serial Number	RZNV1F1000011	

Figure 5-72 LLDP Global Settings Window

The fields that can be configured for LLDP Global Settings are described below:

Parameter	Description
LLDP State	Select this option to enable or disable the LLDP feature

Parameter	Description
LLDP Forward State	Select this option to enable or disable LLDP forward state. When the <b>LLDP State</b> is disabled and <b>LLDP Forward Sate</b> is enabled, the received LLDPDU packet will be forwarded.
LLDP Trap State	Select this option to enable or disable the LLDP trap state.
LLDP-MED Trap State	Select this option to enable or disable the LLDP-MED trap state.

The fields that can be configured for LLDP-MED Configuration are described below:

Parameter	Description
Fast Start Repeat Count	Enter the LLDP-MED fast start repeat count value. This value must be between 1 and 10.

Click the **Apply** button to accept the changes made.

The fields that can be configured for LLDP Configurations are described below:

Parameter	Description
Message TX Interval	Enter the interval between consecutive transmissions of LLDP advertisements on each physical interface. The range is from 5 to 32768 seconds.
Message TX Hold Multiplier	Enter the multiplier on the LLDPDUs transmission interval that used to compute the TTL value of an LLDPDU. This value must be between 2 and 10.
Relnit Delay	Enter the delay value for LLDP initialization on an interface. This value must be between 1 and 10 seconds.
TX Delay	Enter the delay value for sending successive LLDPDUs on an interface. The valid values are from 1 to 8192 seconds and should not be greater than one-fourth of the transmission interval timer.

Click the **Apply** button to accept the changes made.

## **LLDP Port Settings**

This window is used to configure the LLDP port settings.

To view the following window	click L2 Features > LLDP > LLDP Port Settings,	as shown below.
To view the following window,	chok EL i culuico - ELDi - ELDi i oli oclingo,	us shown below.

Figure 5-73 LLDP Port Settings Window

The fields that can be configured are described below:

Parameter	Description	
Unit	Select the switch unit that will be used for this configuration here.	
From Port / To Port	Select the appropriate port range used for the configuration here.	
Notification	Select this option to enable or disable the sending of LLDP notifications.	
Subtype	Select the subtype of LLDP TLV(s). Options to choose from are <b>MAC Address</b> , and <b>Local</b> .	
Admin State	Select the local LLDP agent and allow it to send and receive LLDI frames on the port. Options to choose from are:	
	<ul> <li>TX - The local LLDP agent can only transmit LLDP frames.</li> <li>RX - The local LLDP agent can only receive LLDP frames.</li> <li>TX and RX - The local LLDP agent can both transmit and receive LLDP frames. This is the default option.</li> <li>Disabled - The local LLDP agent can neither transmit nor receive LLDP frames.</li> </ul>	
IP Subtype	Select the type of the IP address information to be sent. Options to choose from are <b>Default</b> , <b>IPv4</b> , and <b>IPv6</b> .	

Parameter	Description	
Action	Select the action that will be taken here. Options to choose from are <b>Remove</b> and <b>Add</b> .	
Address	Enter the IP address that will be sent.	

**NOTE:** The IPv4 or IPv6 address entered here should be an existing LLDP management IP address.

## **LLDP Management Address List**

This window is used to view the LLDP management address list.

To view the following window, click L2 Features > LLDP > LLDP Management Address List, as shown below:

				Find
Subture	Address		OID	Advertising Derte
Subtype	Address	IF Type	OID	Advertising Ports

#### Figure 5-74 LLDP Management Address List Window

The fields that can be configured are described below:

Parameter	Description
All/IPv4/IPv6	Select the subtype. Options to choose from are <b>All</b> , <b>IPv4</b> , and <b>IPv6</b> .

Click the **Find** button to locate a specific entry based on the information entered.

## **LLDP Basic TLVs Settings**

Type-length-value (TLV) allows the specific sending information as a TLV element within LLDP packets. This window is used to enable the settings for the Basic TLVs Settings. An active LLDP port on the Switch always included mandatory data in its outbound advertisements. There are four optional data types that can be configured for an individual port or group of ports to exclude one or more of these data types from outbound LLDP advertisements. The mandatory data type includes four basic types of information (end of LLDPDU TLV, chassis ID TLV, port ID TLV, and Time to Live TLV). The

mandatory data types cannot be disabled. There are also four data types, which can be optionally selected. These include Port Description, System Name, System Description, and System Capability.

To view the following window, click L2 Features > LLDP > LLDP Basic TLVs Settings, as shown below:

DP Basic TLVs S				
nit From Port     Image: state of the state of	To Port	Port Description System Name Disabled  Disabled	System Description System Disabled 💽 Disabled	Capabilities led 🗨 Apply

eth1/0/15	Disabled	Disabled	Disabled	Disabled

#### Figure 5-75 LLDP Basic TLVs Settings Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Port Description	Select this option to enable or disable the Port Description option.
System Name	Select this option to enable or disable the System Name option.
System Description	Select this option to enable or disable the System Description option.
System Capabilities	Select this option to enable or disable the System Capabilities option.

Click the **Apply** button to accept the changes made.

## **LLDP Dot1 TLVs Settings**

LLDP Dot1 TLVs are organizationally specific TLVs, which are defined in IEEE 802.1 and used to configure an individual port or group of ports to exclude one or more of the IEEE 802.1 organizational port VLAN ID TLV data types from outbound LLDP advertisements.

To view the following window, click L2 Features > LLDP > LLDP Dot1 TLVs Settings, as shown below:

LDP Dot1 TL	Vs Settings			
LLDP Dot1 TLVs : Unit From Po	rt To Port	Port VLAN Protocol VLAN Disabled  Disabled	VLAN Name Disabled 💌	Protocol Identity Disabled None Apply

eth1/0/8	Disabled			
eth1/0/9	Disabled			
eth1/0/10	Disabled			
eth1/0/11	Disabled			
eth1/0/12	Disabled			
eth1/0/13	Disabled			
eth1/0/14	Disabled			
eth1/0/15	Disabled			

The fields that can be configured are described below:

Parameter	Description		
Unit	Select the switch unit that will be used for this configuration here.		
From Port / To Port	Select the appropriate port range used for the configuration here.		
Port VLAN	Select this option to enable or disable the port VLAN ID TLV to send. The Port VLAN ID TLV is an optional fixed length TLV that allows a VLAN bridge port to advertise the port's VLAN identifier (PVID) that will be associated with untagged or priority tagged frames.		
Protocol VLAN	Select this option to enable or disable Port and Protocol VLAN ID (PPVID) TLV to send, and enter the VLAN ID in PPVID TLV.		
VLAN Name	Select this option to enable or disable the VLAN name TLV to send, and enter the ID of the VLAN in the VLAN name TLV.		
Protocol Identity	Select this option to enable or disable the Protocol Identity TLV to send, and the protocol name. Options for protocol name to choose from are <b>None</b> , <b>EAPOL</b> , <b>LACP</b> , <b>GVRP</b> , <b>STP</b> , and <b>All</b> .		

Click the **Apply** button to accept the changes made.

## **LLDP Dot3 TLVs Settings**

This window is used to configure an individual port or group of ports to exclude one or more IEEE 802.3 organizational specific TLV data type from outbound LLDP advertisements.

To view the following window, click L2 Features > LLDP > LLDP Dot3 TLVs Settings, as shown below:

LDP Dot3	TLVs Settings	_				_

eth1/0/15		Disabled		Disabled	Disabled		Disabled

Figure 5-77 LLDP Dot3 TLVs Settings Window

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
MAC/PHY Configuration/Status	Select this option to enable or disable the MAC/PHY Configuration/Status TLV to send. The MAC/PHY Configuration/Status TLV is an optional TLV that identifies (1) the duplex and bit-rate capability of the sending IEEE 802.3 LAN node, and (2) the current duplex and bit-rate settings of the sending IEEE 802.3 LAN node.
Link Aggregation	Select this option to enable or disable the Link Aggregation TLV to send. The Link Aggregation TLV indicates contains the following information. Whether the link is capable of being aggregated, whether the link is currently in an aggregation, and the aggregated port channel ID of the port. If the port is not aggregated, then the ID is 0.
Maximum Frame Size	Select this option to enable or disable the Maximum Frame Size TLV to send. The Maximum Frame Size TLV indicates the maximum frame size capability of the implemented MAC and PHY.
Power Via MDI	Select this option to enable or disable the power via MDI TLV to send. Three IEEE 802.3 PMD implementations (10BASE-T, 100BASE-TX, and 1000BASE-T) allow power to be supplied over the link for connected non-powered systems. The Power Via MDI TLV allows network management to advertise and discover the MDI power support capabilities of the sending IEEE 802.3 LAN station.

## **LLDP-MED Port Settings**

This window is used to enable or disable transmitting LLDP-MED TLVs.

To view the following window, click L2 Features > LLDP > LLDP-MED Port Settings, as shown below:

## ARP

## **ARP Aging Time**

This window is used to view and configure the ARP aging time settings.

To view the following window, click **L3 Features > ARP > ARP Aging Time**, as shown below:

ARP Aging Time		
ARP Aging Time		
Total Entries: 1		
Interface Name	Timeout (min)	
vlan1	240	Edit
		1/1  < < 1 > >  Go

The fields that can be configured are described below:

Parameter	Description
Timeout	Enter the ARP aging timeout value here.

Click the Edit button to re-configure the specific entry.

Click the **Apply** button to accept the changes made.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **Static ARP**

This window is used to view and configure the static ARP settings.

To view the following window, click L3 Features > ARP > Static ARP, as shown below:

Static ARP					
Static ARP					
IP Address	Hardw	are Address 00-11-22-33-44-	AA		Apply
Total Entries: 1					
Interfere News	ID Address	Hardware Address	Aging Time	Туре	
Interface Name	IP Address	naruware Address	Aging time	Type	
vlan1	10.90.90.90	3C-1E-04-A1-B9-E0	Forever	Type	Edit Delete

The fields that can be configured are described below:

Parameter	Description
IP Address	Enter the IP address that will be associated with the MAC address here.
Hardware Address	Enter the MAC address that will be associated with the IP address here.

Click the Apply button to accept the changes made.

Click the Edit button to re-configure the specific entry.

Click the **Delete** button to remove the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **Proxy ARP**

This window is used to view and configure the proxy ARP settings. The Proxy ARP feature of the Switch will allow the Switch to reply to ARP requests destined for another device by faking its identity (IP and MAC Address) as the original ARP responder. Therefore, the Switch can then route packets to the intended destination without configuring static routing or a default gateway. The host, usually a Layer 3 switch, will respond to packets destined for another device.

Proxy ARP State
Disabled Edit
1/1  < < 1 > >  Go

To view the following window, click L3 Features > ARP > Proxy ARP, as shown below:

Parameter	Description
Proxy ARP State	Select to enable or disable the proxy ARP state here.

Figure 6-3 Proxy ARP Window

Parameter	Description
	Select to enable or disable the local proxy ARP state here. This local proxy ARP function allows the Switch to respond to the proxy ARP, if the source IP and destination IP are in the same interface.

Click the **Edit** button to re-configure the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **ARP** Table

This window is used to view and configure the ARP table settings.

) Interface VLAN (1-4094)		O IP Address	Mask	
) Hardware Address	00-11-22-33-44-55	_ Type	]	Find
otal Entries: 3				Clear All
Interface Name	IP Address	Hardware Address	Aging Time (min)	Туре
vlan1	10.90.90.1	00-23-7D-BC-2E-18	240	Clear
vlan1	10.90.90.14	10-BF-48-D6-E2-E2	240	Clear
	10.90.90.90	3C-1E-04-A1-B9-E0	Forever	Clear

#### Figure 6-4 ARP Table Window

The fields that can be configured are described below:

Parameter	Description
Interface VLAN	Select and enter the interface's VLAN ID used here. This value must be between <b>1</b> and <b>4094</b> .
IP Address	Select and enter the IP address to display here.
Mask	After the <b>IP Address</b> option was selected, enter the mask address for the IP address here.
Hardware Address	Select and enter the MAC address to display here.
Туре	Select the type option here. Options to choose from are <b>All</b> and <b>Dynamic</b> .

Click the **Find** button to locate a specific entry based on the information entered.

Click the **Clear All** button to clear all the information.

Click the **Clear** button to clear the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **Gratuitous ARP**

This window is used to view and configure the gratuitous ARP settings. A gratuitous ARP request packet is an ARP request packet where the source and the destination IP address are both set to the IP address of the sending device and the destination MAC address is the broadcast address.

Generally, a device use the gratuitous ARP request packet to discover whether the IP address is duplicated by other hosts or to preload or reconfigure the ARP cache entry of hosts connected to the interface.

To view the following window, click **L3 Features > Gratuitous ARP**, as shown below:

Gratuitous ARP	_	_		
Gratuitous ARP Global Settings				
IP Gratuitous ARP State	Enabled	Oisabled		
Gratuitous ARP Trap State	Enabled	Oisabled		
IP Gratuitous ARP Dad-Reply State	Enabled	Disabled		
Gratuitous ARP Learning State	Enabled	Disabled		Apply
Gratuitous ARP Send Interval				
Total Entries: 1				
Interface Name			Interval Time (sec)	
vlan1			0	Edit
				1/1 [< < 1 > >] Go

Figure 6-5 Gratuitous ARP Window

Parameter	Description
IP Gratuitous ARP State	Select option to enable or disable the transmission of gratuitous ARP request packets.
Gratuitous ARP Trap State	Select this option to enable or disable the ARP trap state.
IP Gratuitous ARP Dad-Reply State	Select this option to enable or disable the IP gratuitous ARP Dad-reply state.
Gratuitous ARP Learning State	Select this option to enable or disable the gratuitous ARP learning state. Normally, the system will only learn the ARP reply packet or a normal ARP request packet that asks for the MAC address that corresponds to the system's IP address. This option used to enable or disable the learning of ARP entries in the ARP cache based on the received gratuitous ARP packet. The gratuitous ARP packet is sent by a source IP address that is identical to the IP that the packet is queries for.

The fields that can be configured are described below:

Click the Apply button to accept the changes made.

Click the **Edit** button to re-configure the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **UDP Helper**

## **IP Forward Protocol**

This window is used to display and configure the IP forward protocol settings. This feature is used to enable the forwarding of a specific UDP service type of packets.

To view the following window, click L3 Features > UDP Helper > IP Forward Protocol, as shown below:

IP Forward Protocol		
IP Forward Protocol UDP Port (1-65535)		Apply
Total Entries: 7		
UDP Port	Application	
37	Time Service	Delete
42	IEN-116 Name Service	Delete
49	TACACS	Delete
53	DNS	Delete
69	TFTP	Delete
137	NetBIOS-NS	Delete
138	NetBIOS-DS	Delete
		1/1 < < 1 > > Go

The fields that can be configured are described below:

Parameter	Description
IP Forward Protocol UDP Port	Enter the destination port of the UDP service to be forwarded.

Click the Apply button to accept the changes made.

Click the **Delete** button to remove the specified entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **IP Helper Address**

This window is used to add or remove a target address for the forwarding of UDP broadcast packets. This feature takes effect only when the received interface has an IP address assigned.

The system only forwards packets that satisfy the following restrictions:

- The destination MAC address must be a broadcast address.
- The destination IP address must be an all-one broadcast.
- The packets are IPv4 UDP packets.
- The IP TTL value must be greater than or equal to 2.

To view the following window, click L3 Features > UDP Helper > IP Helper Address, as shown below:

IP Helper Address		
IP Helper Address		
Interface VLAN (1-4094) IP Helper Address Total Entries: 1	· ·	Apply
Interface Name	IP Helper Address	
1	10.5.5.10	Delete
		1/1 < < 1 > > Go

Figure 6-7 IP Helper Address Window

The fields that can be configured are described below:

Parameter	Description
Interface VLAN	Enter the VLAN interface ID used here. The range is from 1 to 4094.
IP Helper Address	Enter the target IPv4 address for the forwarding of the UDP broadcast packet here.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **IPv4 Interface**

This window is used to view and configure the IPv4 interface settings.

To view the following window, click L3 Features > IPv4 Interface, as shown below:

v4 Interface					
nterface VLAN (1-4	094)				Apply Find
Fotal Entries: 1					
Interface	State	IP Address	Secondary	Link Status	

Figure 6-8 IPv4 Interface Window

The fields that can be configured are described below:

Parameter	Description
	Enter the interface's VLAN ID here. This value must be between 1 and 4094.

Click the Apply button to accept the changes made.

Click the **Find** button to locate a specific entry based on the information entered.

Click the Edit button to re-configure the specific entry.

Click the **Delete** button to remove the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

After clicking the **Edit** button, the following window will be available.

IPv4 Interface Configure				
IPv4 Interface Settings	DHCP Client			
Interface	vlan1			Back
Settings				
State	Enabled 🗸			
Description	64 chars			Apply
Primary IP Settings				
Get IP From	Static			
IP Address	10 - 90 - 90 - 90			
Mask	255 · 0 · 0 · 0			Apply Delete
Secondary IP Settings				
IP Address	· · · ·			
Mask	· · ·			Apply
Secondary IP Entry				
Total Entries: 1				
IP Address	Mask	Boot Mode	Secondary	
20.1.1.1	255.0.0.0	Manual	Yes	Delete
			1/1	< < 1 > >  Go

#### Figure 6-9 IPv4 Interface Configure Window

Click the **Back** button to return to the previous window.

The field that can be configured for **Settings** is described below:

Parameter	Description
State	Select this option to enable or disable the IPv4 interface's global state.
Description	Enter the description for the IPv4 interface here. This can be up to 64 characters long.

Click the **Apply** button to accept the changes made.

The field that can be configured for **Primary IP Settings** is described below:

Parameter	Description	
Get IP From	Select the get IP from option here. Options to choose from are:	
	<ul> <li>Static - Users can enter the IPv4 address of this interface manually in the fields provided.</li> <li>DHCP - This interface will obtain IPv4 information automatically from the DHCP server located on the local network.</li> </ul>	
IP Address	Enter the IPv4 address for this interface here.	
Mask	Enter the IPv4 subnet mask for this interface here.	

The fields that can be configured for **Secondary IP Settings** are described below:

Parameter	Description	
IP Address	Enter the IPv4 address as the secondary interface here.	
Mask	Enter the IPv4 subnet mask as the secondary interface here.	

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

After clicking the **DHCP Client** tab, the following page will appear.

IPv4 Interface Configure		
IPv4 Interface Settings	DHCP Client	
DHCP Client Client-ID (1-4094)		
Class ID String	32 chars Hex	
Host Name	64 chars	
Lease	Days (0-10000)         00         Image: Minutes         Apply	

Figure 6-10 DHCP Client Window

The fields that can be configured are described below:

Parameter	Description
DHCP Client Client-ID	Enter the VLAN interface, whose hexadecimal MAC address will be used as the client ID to be sent with the discover message.
Class ID String	Enter the vendor class identifier with the maximum of 32 characters. Tick the <b>Hex</b> check box to have the class identifier in the hexadecimal form.
Host Name	Enter the host name. The maximum length is 64 characters. The host name must start with a letter, end with a letter or digit, and only with interior characters letters, digits, and hyphens.
Lease	Specify the preferred lease time for the IP address to request from the DHCP server. Enter the day duration of the lease, or select the hour and minute duration of the lease.

Click the **Apply** button to accept the changes made.

## **IPv4 Static/Default Route**

This window is used to view and configure the IPv4 static and default route settings. The Switch supports static routing for IPv4 formatted addressing. Users can create up to 64 static route entries for IPv4. For IPv4 static routes, once a static route has been set, the Switch will send an ARP request packet to the next hop router that has been set by the user. Once an ARP response has been retrieved by the Switch from that next hop, the route becomes enabled. However, if the ARP entry already exists, an ARP request will not be sent.

The Switch also supports a floating static route, which means that the user may create an alternative static route to a different next hop. This secondary next hop device route is considered as a backup static route for when the primary static route is down. If the primary route is lost, the backup route will uplink and its status will become active.

Entries into the Switch's forwarding table can be made using both an IP address subnet mask and a gateway.

To view the following window, click L3 Features > IPv4 Static/Default Route, as shown below:

IPv4 Static/Default Route	_			_
IPv4 Static/Default Route				
IP Address	Mask		V Default Route	
Gateway .	· · ·			
Backup State Please	e Select			Apply
Total Entries: 1				
IP Address	Mask	Gateway	Interface Name	
0.0.0.0	0.0.0	10.1.1.254	vlan1	Delete
			1/1  < <	> >j Go

Figure 6-11 IPv4 Static/Default Route Window

The fields that can be configured are described below:

Parameter	Description		
IP Address	Enter the IPv4 address for this route here. Tick the <b>Default Route</b> check box to use the default route as the IPv4 address.		
Mask	nter the IPv4 network mask for this route here.		
Gateway	Enter the gateway address for this route here.		
Backup State	<ul> <li>Select the backup state option here. Options to choose from are:</li> <li>Primary - The route is used as the primary route to the destination.</li> <li>Backup - The route is used as the backup route to the destination.</li> </ul>		

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **IPv4 Route Table**

This window is used to view and configure the IPv4 route table settings.

To view the following window, click L3 Features > IPv4 Route Table, as shown below:

IP Address					
Network Address		a a a			
Connected 🦳 Hardwa	ire 🔿 Summary				Find
Online	o ourmany				
otal Entries: 1					
IP Address	Mask	Gateway	Interface Name	Cost	Protocol

Figure 6-12 IPv4 Route Table Window

The fields that can be configured are described below:

Parameter	Description
IP Address	Select and enter the single IPv4 address here.
Network Address	Select and enter the IPv4 network address here. In the first space enter the network prefix and in the second space enter the network mask.
Connected	Select this option to display only connected routes.
Hardware	Select this option to display only hardware routes. Hardware routes are routes that have been written into the hardware chip.
Summary	Display the brief information of the active routing entries.

Click the **Find** button to locate a specific entry based on the information entered.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **IPv6 Interface**

This window is used to view and configure the IPv6 interface's settings.

To view the following window, click L3 Features > IPv6 Interface, as shown below:

/6 Interface			
terface VLAN (1-4094)			Apply Find
otal Entries: 1 Interface	IPv6 State	Link Status	

Figure 6-13 IPv6 Interface Window

The fields that can be configured are described below:

Parameter	Description
Interface VLAN	Enter the VLAN interface's ID that will be associated with the IPv6 entry.

Click the **Apply** button to accept the changes made.

Click the **Find** button to locate a specific entry based on the information entered.

Click the **Detail** button to view and configure detailed settings for the IPv6 interface entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

#### After clicking the **Detail** button, the following page will be available.

IPv6 Interface				
IPv6 Interface Settings	Interface IPv6 Address	Neighbor Discover	DHCPv6 Client	
Interface	vlan1			
IPv6 State	Disabled 🗸			Back Apply
Static IPv6 Address Settings				
IPv6 Address		EUI-64 Link Local		Apply
NS Interval Settings				
NS Interval (0-3600000)	0 ms			Apply
ND Settings				
Hop Limit (0-255)	0	Reachable Time (0-3600000)	0 ms	
Managed Config Flag	Off 🗸	Other Config Flag	Off	
RA Min Interval (3-1350)	0 sec	RA Max Interval (4-1800)	0 sec	
RA Lifetime (0-9000)	0 sec	RA Suppress	Disabled 🗸	Apply

Figure 6-14 IPv6 Interface (Detail, IPv6 Interface Settings) Window

The fields that can be configured for **Interface** are described below:

Parameter	Description
IPv6 State	Select to enable or disable the IPv6 interface's global state here.

Click the **Back** button to return to the previous window.

Click the **Apply** button to accept the changes made.

Parameter	Description
IPv6 Address	Enter the IPv6 address for this IPv6 interface here.
	Select the <b>EUI-64</b> option to configure an IPv6 address on the interface using the EUI-64 interface ID.
	Select the <b>Link Local</b> option to configure a link-local address for the IPv6 interface.

Click the **Apply** button to accept the changes made.

The fields that can be configured for NS Interval Settings are described below:

Parameter	Description
NS Interval	Enter the NS interval between 0 and 3600000 milliseconds.

Click the **Apply** button to accept the changes made.

The fields that can be configured for ND Settings are described below:

Parameter	Description
Hop Limit	Enter the IPv6 hop limit value here. This is used to configure the hop limit to be advertised in RA messages. The IPv6 packet originated at the system will also use this value as the initial hop limit. To use the default value on this interface, configure this value as 0. The range is from 0 to 255.
Reachable Time	Enter the reachable time used in the ND protocol here. The configured time is used by the router on the interface and is also advertised in RA message. If the specified time is 0, the router will use 30 seconds on the interface and advertise 0 (unspecified) in RA message. The reachable time is used by the IPv6 node in

Parameter	Description
	determining the reachability of the neighboring nodes. The range is from 0 to 3600000 milliseconds in multiples of 1000 milliseconds.
Managed Config Flag	Select to turn the managed configure flag <b>On</b> or <b>Off</b> here. This is used to enable or disable the management configure flag in the advertised RA message. When the neighboring host receives the RA with an enabled flag, the host should use a stateful configuration protocol to obtain IPv6 addresses.
Other Config Flag	Select to turn the other configure flag <b>On</b> or <b>Off</b> here. This is used to enable or disable the other configure flag in the advertised RA message. When this feature is enabled, the router will instruct the connected hosts to use a stateful configuration protocol to obtain auto-configuration information other than IPv6 address.
RA Min Interval	Enter the minimum value of the interval between retransmission of RA messages here. The range is from 3 to 1350 seconds. This value must be smaller than 75% of the maximum value.
RA Max Interval	Enter the maximum value of the interval between retransmission of RA messages here. The range is from 4 to 1800 seconds.
RA Lifetime	Enter the RA lifetime value here. The range is from 0 to 9000 seconds. The lifetime value in RA informs the received host of the lifetime for taking the router as the default router.
RA Suppress	Select to enable or disable the sending of RA messages on the interface here. By default, this feature is enabled on a VLAN interface and disabled on a tunnel interface.

After clicking the **Interface IPv6 Address** tab, at the top of the page, the following page will be available.

IPv6 Interface						
IPv6 Interface Settings	Interface IP	6 Address	Neighbor Discover	DHCP	v6 Client

IPv6 Address/Pref	ix Length	Next Hop	Interface Name	Protocol	

Figure 6-20 IPv6 Static/Default Route Window

The fields that can be configured are described below:

Parameter	Description		
IPv6 Address/Prefix Length	Enter the IPv6 address and prefix length for this route here. Tick the <b>Default Route</b> option to use the default route as the IPv6 address.		
Interface VLAN	Enter the interface's VLAN ID that will be associated with this route here.		
Next Hop IPv6 Address	Enter the next hop IPv6 address here.		
Backup State	<ul> <li>Select the backup state option here. Options to choose from are:</li> <li>Primary - The route is specified as the primary route to the destination.</li> <li>Backup - The route is specified as the backup route to the destination.</li> </ul>		

Click the **Apply** button to accept the changes made.

## **IPv6 Route Table**

This window is used to view and configure the IPv6 route table.

To view the following window, click L3 Features > IPv6 Route Table, as shown below:

IPv6 Route Table					
IPv6 Route Table					
IPv6 Address 2013::1					
○ IPv6 Address/Prefix Length	er Prefixes				
Interface VLAN (1-4094)	34)				
Connected Database Hardware Summary	Database Hardware Summary				
Total Entries: 0					
IPv6 Address/Prefix Length	Next Hop	Interface Name	Cost	Protocol	
Note: C - Connected, S - Static, > - Selected Route, * - Valid Route					

Figure 6-21 IPv6 Route Table Window

Parameter	Description
IPv6 Address	Select and enter the IPv6 address to display here.
IPv6 Address/Prefix Length	Select and enter the IPv6 address and prefix length to display here. Select the <b>Longer Prefixes</b> option to display IPv6 routes with prefixes greater than and equal to the prefix length.
Interface VLAN	Select and enter the interface's VLAN ID to display here.
Connected	Select this option to display only connected routes.
Database	Select to view all the related entries in the routing database instead of just the best route.
Hardware	Select this option to display only hardware routes. Hardware routes are routes that have been written into the hardware chip.
Summary	Display the brief information of the active routing entries.

The fields that can be configured are described below:

Click the **Find** button to locate a specific entry based on the information entered.

## IPMC

## **IP** Multicast Global Settings

This window is used to display and configure the global IP Multicast (IPMC) settings.

To view the following window, click L3 Features > IPMC > IP Multicast Global Settings, as shown below:

Apply

Figure 6-22 IP Multicast Global Settings Window

The fields that can be configured are described below:

Parameter	Description
Table Lookup Mode	Select the IP multicast forwarding lookup mode here. Options to choose from are:
	<ul> <li>IP - Specifies multicast forwarding lookup based on the IP address.</li> <li>MAC - Specifies multicast forwarding lookup based on the MAC address.</li> </ul>

Click the **Apply** button to accept the changes made.

## **IP Multicast Forwarding Cache**

This window is used to display the content of the IP multicast routing forwarding cache database.

To view the following window, click L3 Features > IPMC > IP Multicast Forwarding Cache, as shown below:

Multicast Forwarding Table				
Group Address	Source /	Address		Find Show All
Total Entries: 0				
Source Address	Group Address	Incoming Interface	Outgoing Inte	rface

Figure 6-23 IP Multicast Forwarding Cache Window

The fields that can be configured are described below:

Parameter	Description	
Group Address	Enter the multicast group IP address here.	
Source Address	Enter the source IP address here.	

Click the **Find** button to locate a specific entry based on the information entered.

Click the **Show All** button to display all the entries.

# 7. Quality of Service (QoS)

Basic Settings Advanced Settings

## **Basic Settings**

## **Port Default CoS**

This window is used to view and configure the port's default CoS settings.

To view the following window, click **QoS > Basic Settings > Port Default CoS**, as shown below:

Port Default CoS	_	_		_	
Port Default CoS					
	From Port eth1/0/1	To Port eth1/0/1	Default CoS	None	Apply
Unit 1 Settings					
	Port		Default CoS		Override
	eth1/0/1		0		No
	eth1/0/2		0		No
	eth1/0/3		0		No
	eth1/0/4		0		No
	eth1/0/5		0		No
	eth1/0/6		0		No
	eth1/0/7		0		No
	eth1/0/8		0		No
	eth1/0/9		0		No
	eth1/0/10		0		No

	eth1/0/10			WRR	
	eth1/0/11			WRR	
	eth1/0/12			WRR	
	eth1/0/13			WRR	
	eth1/0/14			WRR	
	eth1/0/15			WRR	

#### Figure 7-2 Port Scheduler Method Window

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Scheduler Method	Select the scheduler method that will be applied to the specified port(s). Options to choose from are Strict Priority ( <b>SP</b> ), Round-Robin ( <b>RR</b> ), Weighted Round-Robin ( <b>WRR</b> ), and Weighted Deficit Round-Robin ( <b>WDRR</b> ). By default, the output queue-scheduling algorithm is <b>WRR</b> .
	<b>WDRR</b> operates by serving an accumulated set of backlogged credits in the transmit queue in a round robin order. Initially, each queue sets its credit counter to a configurable quantum value. Every time a packet from a CoS queue is sent, the size of the packet is subtracted from the corresponding credit counter and the service right is turned over to the next lower CoS queue. When the credit counter drops below 0, the queue is no longer serviced until its credits are replenished. When the credit counters of all CoS queues reaches 0, the credit counters will be replenished at that time. All packets are serviced until their credit counter is zero or negative and the last packet is transmitted completely. When this condition happens, the credits are replenished. When the credits are replenished, a quantum of credits are added to each CoS queue credit counter. The quantum for each CoS queue may be different based on the user configuration.
	To set a CoS queue in the <b>SP</b> mode, any higher priority CoS queue must also be in the strict priority mode.
	<b>WRR</b> operates by transmitting permitted packets into the transmit queue in a round robin order. Initially, each queue sets its weight to a configurable weighting. Every time a packet from a higher priority CoS queue is sent, the corresponding weight is subtracted by 1

Parameter	Description
	and the packet in the next lower CoS queue will be serviced. When the weight of a CoS queue reaches zero, the queue will not be serviced until its weight is replenished. When weights of all CoS queues reach 0, the weights get replenished at a time.

## **Queue Settings**

This window is used to view and configure the queue settings.

To view the following window, click **QoS > Basic Settings > Queue Settings**, as shown below:

Queue Settings Queue Settings							
	To Port Queue ID eth1/0/1 V 0 V	WRR Weight (0-127) WDR	R Quantum (0-127)

### Figure 7-3 Queue Settings Window

Parameter	Description				
Unit	Select the switch unit that will be used for this configuration here.				
From Port / To Port	Select the appropriate port range used for the configuration here.				
Queue ID	Enter the queue ID value here. This value must be between <b>0</b> an <b>7</b> .				
WRR Weight	Enter the WRR weight value here. This value must be between 0 and 127. To satisfy the behavior requirements of Expedited Forwarding (EF), the highest queue is always selected by the Per- hop Behavior (PHB) EF and the schedule mode of this queue should be strict priority scheduling. The weight of the last queue should be zero while the Differentiate Service is supported.				
WDRR Quantum	Enter the WDRR quantum value here. This value must be between 0 and 127.				

## **CoS to Queue Mapping**

This window is used to view and configure the CoS-to-Queue mapping settings.

To view the following window, click **QoS > Basic Settings > CoS to Queue Mapping**, as shown below:

CoS to Queue Mapping	
CoS	Queue ID
0	2
1	0 💌
2	1
3	3 💌
4	4
5	5 💌
6	6
7	7 💌
	Apply

Figure 7-4 CoS to Queue Mapping Window

The fields that can be configured are described below:

Parameter	Description
Queue ID	Select the queue ID that will be mapped to the corresponding CoS value. Options to choose from are <b>0</b> to <b>7</b> .

## **Port Rate Limiting**

This window is used to view and configure the port rate limiting settings.

To view the following window,	click QoS > Basic Se	ttings > Port Rate I imiting	as shown below.
	CHER QUO - Dasic De	sungs z i ori Rate Linning	

Port Rate Limiting

eth1/0/15	No Limit	No Limit	No Limit	No Limit

Figure 7-5 Port Rate Limiting Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Direction	Select the direction option here. Options to choose from are:
	<ul> <li>Input - The rate limit for ingress packets is configured.</li> <li>Output - The rate limit for egress packets is configured.</li> </ul>
Rate Limit	Select and enter the rate limit value here.
	When <b>Bandwidth</b> is selected, enter the input/output bandwidth value used in the space provided. This value must be between 64 and 10000000 kbps. Also, enter the <b>Burst Size</b> value in the space provided. This value must be between 0 and 128000 kilobytes.
	When <b>Percent</b> is selected, enter the input/output bandwidth percentage value used in the space provided. This value must be between 1 and 100 percent (%). Also, enter the <b>Burst Size</b> value in the space provided. This value must be between 0 and 128000 kilobytes.
	Select the <b>None</b> option to remove the rate limit on the specified port(s). The specified limitation cannot exceed the maximum speed of the specified interface. For the ingress bandwidth limitation, the ingress can trigger a pause frame or a flow control frame when the received traffic exceeds the limitation.

## **Queue Rate Limiting**

This window is used to view and configure the queue rate limiting settings.

To view the following window, click **QoS > Basic Settings > Queue Rate Limiting**, as shown below:

Queue Rate Limiting         Unit       From Port       To Port       Queue ID       Rate Limit         1       eth1/0/1       0       Min Bandwidth (64-10000000)       Kbps       Max Bandwidth (64-10000000)         Min Percent (1-100)       %       Max Percent (1-100)       %         None       Apply

eth1/0/15	No Li															

Figure 7-6 Queue Rate Limiting Window

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Queue ID	Select the queue ID that will be configured here. Options to choose from are <b>0</b> to <b>7</b> .
Rate Limit	Select and enter the queue rate limit settings here.
	When the <b>Min Bandwidth</b> option is selected, enter the minimum bandwidth rate limit value in the space provided. This value must be between 64 and 10000000 kbps. Also, enter the maximum bandwidth ( <b>Max Bandwidth</b> ) rate limit in the space provided. This value must be between 64 and 10000000 kbps. The granularity is 64.
	When the minimal bandwidth is configured, the packet transmitted from the queue can be guaranteed. When the maximum bandwidth is configured, packets transmitted from the queue cannot exceed the maximum bandwidth even if the bandwidth is available.
	When configuring the minimal bandwidth, the aggregate of the configured minimum bandwidth must be less than 75 percent of the interface bandwidth to make sure the configured minimal bandwidth can be guaranteed. It is not necessary to set the minimum guaranteed bandwidth for the highest strict priority queue. This is because the traffic in this queue will be serviced first if the minimal bandwidth of all queues is satisfied.
	The configuration of this command can only be attached to a physical port but not a port-channel. That is the minimum

Parameter	Description
	guaranteed bandwidth of one CoS cannot be used across physical ports.
	When the <b>Min Percent</b> option is selected, enter the minimum bandwidth percentage value in the space provided. This value must be between <b>1</b> and <b>100</b> percent (%). Also, enter the maximum percentage value ( <b>Max Percent</b> ) in the space provided. This value must be between <b>1</b> and <b>100</b> percent (%).

## **Advanced Settings**

## **DSCP** Mutation Map

This window is used to view and configure the Differentiated Services Code Point (DSCP) mutation map settings. When a packet is received by an interface, based on a DSCP mutation map, the incoming DSCP can be mutated to another DSCP immediately before any QoS operations. The DSCP mutation is helpful to integrate domains with different DSCP assignments. The DSCP-CoS map and DSCP-color map will still be based on the packet's original DSCP. All the subsequent operations will base on the mutated DSCP.

To view the following window,	click QoS > Advanced Se	ettings > DSCP	Mutation Map, as shown
below:			

utation Name	Input DSCP List (0-63)	Output DSCP	(0-63)									
2 chars	1,3,60-63										ſ	Apply
												19.696
							Digiti	in ones

Parameter	Description
Aggregate Policer Name	Enter the aggregate policer's name here.
Average Rate	Enter the average rate value here. This value must be between <b>0</b> and <b>10000000</b> kbps.
Normal Burst Size	Enter the normal burst size value here. This value must be between <b>0</b> and <b>16384</b> Kbytes.
Maximum Burst Size	Enter the maximum burst size value here. This value must be between 0 and <b>16384</b> Kbytes.
Confirm Action	Select the confirm action here. The confirm action specifies the action to take on green color packets. If the confirm action is not specified, the default action is to <b>Transmit</b> . Options to choose from are:

Parameter	Description
	<ul> <li>Drop - Specifies that the packet will be dropped.</li> <li>Set-DSCP-Transmit - Enter the IP DSCP value in the space provided. This value sets the IP Differentiated Services Code Point (DSCP) value and transmits the packet with the new IP DSCP value.</li> <li>Set-1P-Transmit - Enter the 1P transmit value in the space provided. This value sets the IEEE 802.1p value and transmits the packet with the new value.</li> <li>Set-DSCP-1P - Enter the IP DSCP and 1P transmit values in the spaces provided.</li> <li>Transmit - Specifies that packets will be transmitted unaltered.</li> </ul>
Exceed Action	<ul> <li>Select the exceed action here. The exceed action specifies the action to take on packets that exceed the rate limit. For a two rate policer, if the exceed action is not specified, the default action is Drop. Options to choose from are:</li> <li>Drop - Specifies that the packet will be dropped.</li> <li>Set-DSCP-Transmit - Enter the IP DSCP value in the space</li> </ul>
	<ul> <li>Set-DSCI -Transmit - Enter the IP DSCP value and transmits the packet with the new IP DSCP value.</li> <li>Set-1P-Transmit - Enter the 1P transmit value in the space provided. This value sets the IEEE 802.1p value and transmits the packet with the new value.</li> <li>Set-DSCP-1P - Enter the IP DSCP and 1P transmit values in the spaces provided.</li> <li>Transmit - Specifies that packets will be transmitted unaltered.</li> </ul>
Violate Action	Select the violate action here. The violate action specifies the action to take on packets that violate the normal and maximum burst sizes for singe rate policing. It specifies the action to take for those packets that did not conform to both CIR and PIR. For a single rate policer, if the violate action is not specified, it will create a single-rate two-color policer. For a two-rate policer, if the violation action is not specified, the default action is equal to the exceed action. Options to choose from are:
	<ul> <li>Drop - Specifies that the packet will be dropped.</li> <li>Set-DSCP-Transmit - Enter the IP DSCP value in the space provided. This value sets the IP DSCP value and transmits the packet with the new IP DSCP value.</li> <li>Set-1P-Transmit - Enter the 1P transmit value in the space provided. This value sets the IEEE 802.1p value and transmits the packet with the new value.</li> <li>Set-DSCP-1P - Enter the IP DSCP and 1P transmit values in the spaces provided.</li> <li>Transmit - Specifies that packets will be transmitted unaltered.</li> </ul>
Color Aware	Select this option to enable or disable color aware option here. When color aware is not specified, the policer works in the colorblind mode. When color aware is enabled, the policer works in the color aware mode.

Click the **Delete** button to remove the specific entry.

After clicking the Two Rate Setting tab, at the top of the page, the following page will be available.

Figure 7-15 Two Rate Settings Window

Parameter	Description
Aggregate Policer Name	Enter the aggregate policer's name here.
CIR	Enter the Committed Information Rate (CIR) value here. This value must be between 0 and 10000000 kbps. The committed packet rate is the first token bucket for the two-rate metering.
Confirm Burst	Enter the confirm burst value here. This value must be between 0 and 16384 Kbytes. The confirm burst value specifies the burst size for the first token bucket in kbps.
PIR	Enter the Peak information Rate (PIR) value here. This value must be between 0 and 10000000 kbps. The peak information rate is the second token bucket for the two-rate metering.
Peak Burst	Enter the peak burst value here. This value must be between 0 and 16384 Kbytes. The peak burst value is the burst size for the second token bucket in kilobytes.
Confirm Action	<ul> <li>Select the confirm action here. The confirm action specifies the action to take on green color packets. If the confirm action is not specified, the default action is to Transmit. Options to choose from are:</li> <li>Drop - Specifies that the packet will be dropped.</li> <li>Set-DSCP-Transmit - Enter the IP DSCP value in the space provided. This value sets the IP DSCP value and transmits the packet with the new IP DSCP value.</li> <li>Set-1P-Transmit - Enter the 1P transmit value in the space provided. This value sets the IEEE 802.1p value and transmits the packet with the new value.</li> <li>Set-DSCP-1P - Enter the IP DSCP and 1P transmit values in the spaces provided.</li> <li>Transmit - Specifies that packets will be transmitted unaltered.</li> </ul>
Exceed Action	<ul> <li>Select the exceed action here. The exceed action specifies the action to take on packets that exceed the rate limit. For a two rate policer, if the exceed action is not specified, the default action is Drop. Options to choose from are:</li> <li>Drop - Specifies that the packet will be dropped.</li> <li>Set-DSCP-Transmit - Enter the IP DSCP value in the space provided. This value sets the IP DSCP value and transmits the packet with the new IP DSCP value.</li> <li>Set-1P-Transmit - Enter the 1P transmit value in the space provided. This value sets the IEEE 802.1p value and transmits the packet with the new value.</li> <li>Set-DSCP-1P - Enter the IP DSCP and 1P transmit values in</li> </ul>

Parameter	Description			
	<ul> <li>Transmit - Specifies that packets will be transmitted unaltered.</li> </ul>			
Violate Action	Select the violate action here. The violate action specifies the action to take on packets that violate the normal and maximum burst sizes for singe rate policing. It specifies the action to take for those packets that did not conform to both CIR and PIR. For a single rate policer, if the violate action is not specified, it will create a single-rate two-color policer. For a two-rate policer, if the violation action is not specified, the default action is equal to the exceed action. Options to choose from are:			
	<ul> <li>Drop - Specifies that the packet will be dropped.</li> <li>Set-DSCP-Transmit - Enter the IP DSCP value in the space provided. This value sets the IP DSCP value and transmits the packet with the new IP DSCP value.</li> <li>Set-IP-Transmit - Enter the 1P transmit value in the space provided. This value sets the IEEE 802.1p value and transmits the packet with the new value.</li> <li>Set-DSCP-1P - Enter the IP DSCP and 1P transmit values in the spaces provided.</li> <li>Transmit - Specifies that packets will be transmitted unaltered.</li> </ul>			
Color Aware	Select this option to enable or disable color aware option here. When color aware is not specified, the policer works in the colorblind mode. When color aware is enabled, the policer works in the color aware mode.			

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specific entry.

### **Policy Map**

This window is used to view and configure the policy map settings.

To view the following window, click **QoS > Advanced Settings > Policy Map**, as shown below:

ONew CoS Queue (0-7)	None	
		Back Apply

After clicking the Set Action button, the following window will appear.

Figure 7-18 Set Action Window

The fields that can be configured are described below:

Parameter	Description
None	Select this option to match nothing to this policy map.
Specify	Select the option to match something to this policy map.
New Precedence	Select a new precedence for the packet. This value must be between 0 and 7. Tick the <b>IPv4 only</b> to only mark IPv4 precedence. Setting the precedence will not affect the CoS queue selection.
New DSCP	Select a new DSCP for the packet. This value must be between 0 and 63. Tick the <b>IPv4 only</b> to only mark IPv4 precedence. Setting DSCP will not affect the CoS queue selection.
New CoS	Select a new CoS value for the packet. This value must be between 0 and 7. Setting CoS will not affect the CoS queue selection.
New CoS Queue	Select a new CoS queue for the packet. This value must be between 0 and 7. This overwrites the original CoS queue selection.

Click the **Apply** button to accept the changes made.

Click the **Back** button to return to the previous window.

After clicking the **Policer** button, the following window will appear.

Figure 8-4 ACL Configuration Wizard (Add Rule for MAC ACL) Window

The fields that can be configured are described below:

Parameter	Description		
Sequence No.	Enter the ACL rule number here. This value must be between 1 and 65535. Select <b>Auto Assign</b> to automatically generate an ACL rule number for this entry.		
Source	<ul> <li>Select and enter the source information here. Options to choose from are:</li> <li>Any - Any source traffic will be evaluated according to the conditions of this rule.</li> <li>Host - Enter the source host's MAC address here.</li> <li>MAC - The Wildcard option will also be available. Enter the source MAC address and wildcard value in the spaces provided.</li> </ul>		
Destination	<ul> <li>Select and enter the destination information here. Options to choose from are:</li> <li>Any - Any destination traffic will be evaluated according to the conditions of this rule.</li> <li>Host - Enter the destination host's MAC address here.</li> <li>MAC - The Wildcard option will also be available. Enter the destination MAC address and wildcard value in the spaces provided.</li> </ul>		
Specify Ethernet Type	Select the Ethernet type option here. Options to choose from are aarp, appletalk, decent-iv, etype-6000, etype-8042, lat, lavc-sca, mop-console, mop-dump, vines-echo, vines-ip, xns-idp, and arp.		
Ethernet Type	Enter the Ethernet type hexadecimal value here. This value must be between 0x0 and 0xFFFF. When any Ethernet type profile is selected in the <b>Specify Ethernet Type</b> drop-down list, the appropriate hexadecimal value will automatically be entered.		
Ethernet Type Mask	Enter the Ethernet type mask hexadecimal value here. This value must be between 0x0 and 0xFFFF. When any Ethernet type profile is selected in the <b>Specify Ethernet Type</b> drop-down list, the appropriate hexadecimal value will automatically be entered.		
CoS	Select the CoS value used here. This value is between <b>0</b> and <b>7</b> .		
VID	Enter the VLAN ID that will be associated with this ACL rule here. This value must be between 1 and 4094.		
VLAN Range	Enter the VLAN range here. Enter the minimum and maximum VLAN ID in the range here.		
Time Range	Enter the name of the time range to associate with this ACL rule.		
Action	Select the action that this rule will take here. Options to choose from are <b>Permit</b> and <b>Deny</b> .		

Click the **Back** button to return to the previous window.

Click the **Next** button to continue.

After clicking the **IPv4** radio button and the **Next** button, the following window will appear.

				Back Apply

Figure 8-17 ACL Configuration Wizard (Apply Port) Window

The fields that can be configured are described below:

Parameter	Description	
Unit	Select the switch unit that will be used for this configuration here.	
From Port / To Port	Select the appropriate port range used for the configuration here.	
Direction	Select the direction here. Option to choose from is In.	

Click the **Back** button to return to the previous window.

Click the **Apply** button to accept the changes made.

## **ACL Access List**

This window is used to view and configure the ACL access list settings.

To view the following window, click **ACL > ACL Access List**, as shown below:

ACL Access List								
ACL Type All	• ID (1	1-14999)		O ACL	Name 32 (	hars		Find
Total Entries: 0								Add ACL
ID ACL Name	ACL Type	Start Sequence No.	Step	Counte	r State	Remark		
						Clear All Counter	Clear Counter	Add Rule
Sequence No. Action		Rule	Ti	me Range		Counter		

Figure 8-18 ACL Access List Window

Parameter	Description
	Select the ACL profile type to find here. Options to choose from are AII, IP ACL, IPv6 ACL, MAC ACL, and Expert ACL.

Parameter	Description	
ID	Enter the ACL ID here. The range is from 1 to 14999.	
ACL Name	Enter the ACL name here. This name can be up to 32 characters long.	

Click the Find button to locate a specific entry based on the information entered.

Click the **Add ACL** button to create a new ACL profile.

Click the Clear All Counter button to clear all the counter information displayed.

Click the **Clear Counter** button to clear the counter information for the rule displayed.

Click the Add Rule button to create an ACL rule for the ACL profile selected.

### **Standard IP ACL**

After clicking the Add ACL button, users can create a new ACL profile, as shown below:

ACL Type	Standard IP ACL	
D (1-1999)		
ACL Name	32 chars	
		Apply

The fields that can be configured are described below:

Parameter	Description	
ACL Type	Select the ACL profile type here. Options to choose from are Standard IP ACL, Extended IP ACL, Standard IPv6 ACL, Extended IPv6 ACL, Extended MAC ACL, and Extended Expert ACL.	
ID	Enter the ACL ID from 1 to 1999.	
ACL Name	Enter the ACL profile's name here. This name can be up to 32 characters long.	

Click the **Apply** button to create the new ACL profile.

After creating a Standard IP ACL profile, the newly created Standard IP ACL profile will be displayed in the ACL profile display table, as shown below:

ACL Type	All	▼			ACL Name     32 chars		Find
Total Entries: 1 Add ACL							
ID	ACL Name	ACL Type	Start Sequence No.	Step	Counter State	Remark	
1	StandardIP	Standard IP ACL	10	10	Disabled		Edit Delete
1/1 K < 1 > > Go							

Figure 8-20 Standard IP ACL (Main) Window

Click the **Edit** button to re-configure the specific ACL profile.

Click the **Delete** button to remove the specific ACL profile.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

To add an ACL rule in the ACL profile, select it (the ACL profile will toggle to the bold font), and click the **Add Rule** button.

					Back Apply

Figure 8-22 Standard IP ACL (Add Rule) Window

Parameter	Description
Sequence No.	Enter the ACL rule number here. This value must be between <b>1</b> and <b>65535</b> . If this value is not specified, the system will automatically generate an ACL rule number for this entry.
Action	Select the action that this rule will take here. Options to choose from are <b>Permit</b> and <b>Deny</b> .
Source	<ul> <li>Select and enter the source information here. Options to choose from are:</li> <li>Any - Any source traffic will be evaluated according to the conditions of this rule.</li> <li>Host - Enter the source host's IP address here.</li> <li>IP - The Wildcard option will also be available. Enter the group of source IP addresses by using a wildcard bitmap.</li> </ul>

Parameter	Description
	The bit corresponding to the bit value 1 will be ignored. The bit corresponding to the bit value 0 will be checked.
Destination	Select and enter the destination information here. Options to choose from are:
	<ul> <li>Any - Any destination traffic will be evaluated according to the conditions of this rule.</li> <li>Host - Enter the destination host's IP address here.</li> <li>IP - The Wildcard option will also be available. Enter the group of destination IP addresses by using a wildcard bitmap. The bit corresponding to the bit value 1 will be ignored. The bit corresponding to the bit value 0 will be checked.</li> </ul>
Time Range	Enter the name of the time range to associate with this ACL rule.

Click the **Back** button to discard the changes made and return to the previous page.

Click the **Apply** button to accept the changes made.

To enable the **Counter State** option or to enter a **Remark** for the profile, click the **Edit** button, next to the specific ACL profile (found in the ACL profile table).

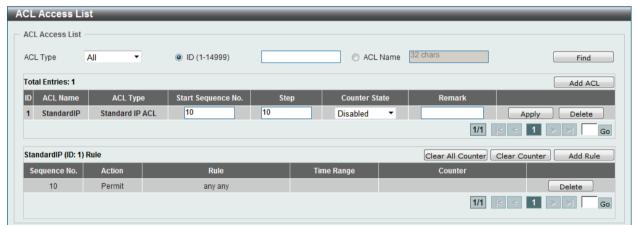

Figure 8-23 Standard IP ACL (Edit ACL) Window

The fields that can be configured are described below:

Parameter	Description
Start Sequence No.	Enter the start sequence number here.
Step	Enter the sequence number increment here.
Counter State	Select to enable or disable the counter state option here.
Remark	Enter an optional remark that will be associated with this profile here.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specific entry.

To view the list of rules, that are associated with an ACL profile, select the ACL profile (found in the ACL profile table). The rule of ACL rules, connected to the selected ACL profile, will be displayed in the ACL rule table, as shown below:

ACL Access List									
ACL Type	All	▼      ● ID (1-14999)				L Name 32 char	3		Find

							1/1	< < 1	> >] Go

Figure 8-24 Standard IP ACL (Rule Display) Window

Click the **Delete** button to remove the specific ACL rule.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **Extended IP ACL**

After clicking the Add ACL button, users can create a new ACL profile, as shown below:

Add ACL Acces	ss List	_
Add ACL Access Li	st	
ACL Type	Extended IP ACL	
ID (2000-3999)		
ACL Name	32 chars	
		Apply
Note: The first char	racter of ACL name must be a letter.	

Figure 8-25 Extended IP ACL (Add Profile) Window

The fields that can be configured are described below:

Parameter	Description
ACL Type	Select the ACL profile type here. Options to choose from are Standard IP ACL, Extended IP ACL, Standard IPv6 ACL, Extended IPv6 ACL, Extended MAC ACL, and Extended Expert ACL.
ID	Enter the ACL ID from 2000 to 3999.
ACL Name	Enter the ACL profile's name here. This name can be up to 32 characters long.

Click the **Apply** button to create the new ACL profile.

After creating an Extend IP ACL profile, the newly created Extend IP ACL profile will be displayed in the ACL profile display table, as shown below:

CL Type	All	<ul> <li>ID (1-14999)</li> </ul>		0	ACL Name 32 chars		Find

Click the **Delete** button to remove the specific ACL rule.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **Extended MAC ACL**

After clicking the **Add ACL** button, users can create a new ACL profile, as shown below:

ACL Type	Extended MAC ACL 🔻	
D (6000-7999)		
ACL Name	32 chars	
		Apply

Figure 8-51 Extended MAC ACL (Add Profile) Window

The fields that can be configured are described below:

Parameter	Description
ACL Type	Select the ACL profile type here. Options to choose from are Standard IP ACL, Extended IP ACL, Standard IPv6 ACL, Extended IPv6 ACL, Extended MAC ACL, and Extended Expert ACL.
ID	Enter the ACL ID from 6000 to 7999.
ACL Name	Enter the ACL profile's name here. This name can be up to 32 characters long.

Click the **Apply** button to create the new ACL profile.

After creating an Extend MAC ACL profile, the newly created Extend MAC ACL profile will be displayed in the ACL profile display table, as shown below:

CL Type	All 🔻	ID (1-14999)		0	ACL Name 32 chars		Find

Figure 8-54 Extended MAC ACL (Add Rule) Window

Parameter	Description
Sequence No.	Enter the ACL rule number here. This value must be between 1 and 65535. If this value is not specified, the system will automatically generate an ACL rule number for this entry.
Action	Select the action that this rule will take here. Options to choose from are <b>Permit</b> and <b>Deny</b> .
Source	<ul> <li>Select and enter the source information here. Options to choose from are:</li> <li>Any - Any source traffic will be evaluated according to the</li> </ul>
	<ul> <li>conditions of this rule.</li> <li>Host - Enter the source host's MAC address here.</li> <li>MAC - The Wildcard option will also be available. Enter the source MAC address and wildcard value in the spaces provided.</li> </ul>
Destination	Select and enter the destination information here. Options to choose from are:
	<ul> <li>Any - Any destination traffic will be evaluated according to the conditions of this rule.</li> <li>Host - Enter the destination host's MAC address here.</li> <li>MAC - The Wildcard option will also be available. Enter the destination MAC address and wildcard value in the spaces provided.</li> </ul>
Specify Ethernet Type	Select the Ethernet type option here. Options to choose from are aarp, appletalk, decent-iv, etype-6000, etype-8042, lat, lavc-sca, mop-console, mop-dump, vines-echo, vines-ip, xns-idp, and arp.
Ethernet Type	Enter the Ethernet type hexadecimal value here. This value must be between 0x0 and 0xFFFF. When any Ethernet type profile is selected in the <b>Specify Ethernet Type</b> drop-down list, the appropriate hexadecimal value will automatically be entered.

Parameter	Description
Ethernet Type Mask	Enter the Ethernet type mask hexadecimal value here. This value must be between 0x0 and 0xFFFF. When any Ethernet type profile is selected in the <b>Specify Ethernet Type</b> drop-down list, the appropriate hexadecimal value will automatically be entered.
CoS	Select the CoS value used here. This value is between <b>0</b> and <b>7</b> .
VID	Enter the VLAN ID that will be associated with this ACL rule here. This value must be between 1 and 4094.
VLAN Range	Enter the VLAN range here. Enter the minimum and maximum VLAN ID in the range here.
Time Range	Enter the name of the time range to associate with this ACL rule.

Click the **Back** button to discard the changes made and return to the previous page.

Click the **Apply** button to accept the changes made.

To enable the **Counter State** option or to enter a **Remark** for the profile, click the **Edit** button, next to the specific ACL profile (found in the ACL profile table).

Parameter	Description
Source IP Address	Select and enter the source information here. Options to choose from are:
	<ul> <li>Any - Any source traffic will be evaluated according to the conditions of this rule.</li> <li>Host - Enter the source host's IP address here.</li> <li>IP - The Wildcard option will also be available. Enter the group of source IP addresses by using a wildcard bitmap. The bit corresponding to the bit value 1 will be ignored. The bit corresponding to the bit value 0 will be checked.</li> </ul>
Destination IP Address	Select and enter the destination information here. Options to choose from are:
	<ul> <li>Any - Any destination traffic will be evaluated according to the conditions of this rule.</li> <li>Host - Enter the destination host's IP address here.</li> <li>IP - The Wildcard option will also be available. Enter the group of destination IP addresses by using a wildcard bitmap. The bit corresponding to the bit value 1 will be ignored. The bit corresponding to the bit value 0 will be checked.</li> </ul>
Source MAC Address	Select and enter the source information here. Options to choose from are:
	<ul> <li>Any - Any source traffic will be evaluated according to the conditions of this rule.</li> <li>Host - Enter the source host's MAC address here.</li> <li>MAC - The Wildcard option will also be available. Enter the source MAC address and wildcard value in the spaces provided.</li> </ul>

Parameter	Description
Destination MAC Address	<ul> <li>Select and enter the destination information here. Options to choose from are:</li> <li>Any - Any destination traffic will be evaluated according to the conditions of this rule.</li> <li>Host - Enter the destination host's MAC address here.</li> <li>MAC - The Wildcard option will also be available. Enter the destination MAC address and wildcard value in the spaces provided.</li> </ul>
Specify ICMP Message Type	Select the ICMP message type used here.
ICMP Message Type	When the ICMP Message Type is selected in the <b>Specify ICMP</b> <b>Message Type</b> drop-down list, this numerical value will automatically be entered. When the ICMP Message Type is not selected in the <b>Specify</b> <b>ICMP Message Type</b> drop-down list, enter the ICMP Message Type numerical value used here.
Message Code	When the ICMP Message Type is selected in the <b>Specify ICMP</b> <b>Message Type</b> drop-down list, this numerical value will automatically be entered. When the ICMP Message Type is not selected in the <b>Specify</b> <b>ICMP Message Type</b> drop-down list, enter the Message Code numerical value used here.
IP Precedence	Select the IP precedence value used here. Options to choose from are 0 (routine), 1 (priority), 2, (immediate), 3 (flash), 4 (flash-override), 5 (critical), 6 (internet), and 7 (network).
ToS	After selecting the IP precedence value, select the Type-of-Service (ToS) value that will be used here. Options to choose from are 0 (normal), 1 (min-monetary-cost), 2 (max-reliability), 3, 4 (max-throughput), 5, 6, 7, 8 (min-delay), 9, 10, 11, 12, 13, 14, and 15.
DSCP	Select or enter the DSCP value used here. This value must be between 0 and 63.
VID	Enter the VLAN ID that will be associated with this ACL rule here. This value must be between 1 and 4094.
VLAN Range	Enter the VLAN range here. Enter the minimum and maximum VLAN ID in the range here.
CoS	Select the Class of Service (CoS) value here. Options to choose from are from <b>0</b> to <b>7</b> .
Time Range	Enter the name of the time range to associate with this ACL rule.

After selecting the **EIGRP**, **ESP**, **GRE**, **IGMP**, **OSPF**, **PIM**, **VRRP**, **IP-in-IP**, **PCP**, **Protocol ID**, or **None** option as the **Protocol Type**, the following page and parameters will be available, as shown below:

# **Port Security**

## **Port Security Global Settings**

This window is used to view and configure the port security global settings. Port Security is a security feature that prevents unauthorized computers (with source MAC addresses) unknown to the Switch prior to locking the port (or ports) from connecting to the Switch's locked ports and gaining access to the network.

To view the following window, click **Security > Port Security > Port Security Global Settings**, as shown below:

Port Security Global Settings		
Port Security Trap Settings		
Trap State	C Enabled O Disabled	Apply
Port Security Trap Rate Settings		
Trap Rate (0-1000)	0	Apply
Port Security System Settings		
System Maximum Address (1-6656)	v No Limit	Apply

Figure 9-1 Port Security Global Settings Window

The fields that can be configured for Port Security Trap Settings are described below:

Parameter	Description
Trap State	Click to enable or disable port security traps on the Switch.

Click the Apply button to accept the changes made.

The fields that can be configured for **Port Security Trap Rate Settings** are described below:

Parameter	Description
Trap Rate	Enter the number of traps per second. The range is from 0 to 1000. The default value 0 indicates an SNMP trap to be generated for every security violation.

Click the **Apply** button to accept the changes made.

The fields that can be configured for **Port Security System Settings** are described below:

Parameter	Description
System Maximum Address	Enter the maximum number of secure MAC addresses allowed. If not specified, the default value is No Limit. The valid range is from 1 to 6656. Tick the <b>No Limit</b> checkbox to allow the maximum number of secure MAC address.

Click the **Apply** button to accept the changes made.

## **Port Security Port Settings**

This window is used to view and configure the port security port settings.

To view the following window, click **Security > Port Security > Port Security Port Settings**, as shown below:

ort Secu	rity Port S	ettings	_	_	_	_	_	_	_

Figure 9-2 Port Security Port Settings Window

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
State	Select to enable or disable the port security feature on the port(s) specified.
Maximum	Enter the maximum number of secure MAC addresses that will be allowed on the port(s) specified. This value must be between 0 and 6656. By default, this value is 32.
Violation Action	Select the violation action that will be taken here. Options to choose from are:

Parameter	Description		
	<ul> <li>Protect - Specifies to drop all packets from the insecure hosts at the port-security process level, but does not increment the security-violation count.</li> <li>Restrict - Specifies to drop all packets from the insecure hosts at the port-security process level and increments the security-violation count and record the system log.</li> <li>Shutdown - Specifies to shut down the port if there is a security violation and record the system log.</li> </ul>		
Security Mode	<ul> <li>Select the security mode option here. Options to choose from are:         <ul> <li>Permanent - Specifies that all learned MAC addresses are not be purged out unless the user manually deletes those entries.</li> <li>Delete-on-Timeout - Specifies that all learned MAC addresses are purged out when an entry is aged out or when the user manually deletes these entries.</li> </ul> </li> </ul>		
Aging Time	Enter the aging time value used for auto-learned dynamic secured addresses on the specified port here. This value must be between 0 and 1440 minutes.		
Aging Type	<ul> <li>Select the aging type here. Options to choose from are:</li> <li>Absolute - Specifies that all the secure addresses on this port age out exactly after the time specified and is removed from the secure address list. This is the default type.</li> <li>Inactivity - Specifies that the secure addresses on this port age out only if there is no data traffic from the secure source address for the specified time period.</li> </ul>		

Click the **Apply** button to accept the changes made.

# **Port Security Address Entries**

This window is used to view, clear, and configure the port security address entries.

To view the following window, click Security > Port Security > Port Security Address Entries, as shown below:

Port Security /	Address En	tries			
Port Security Add	ress Entries —				
Unit	Port eth1/0/1	MAC Address	Permanent Add Dele	ete Clear by Port Clear by MAC	
Total Entries: 1					
Port	VID	MAC Address	Address Type	Remaining Time (mins)	
eth1/0/1	1	00-84-57-00-00-00	Permanent	-	
				1/1  < < 1 > >  Go	

Figure 9-3 Port Security Address Entries Window

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
Port	Select the port used for the configuration here.
MAC Address	Enter the MAC address here. Tick the <b>Permanent</b> check box so that all learned MAC addresses would not be purged out unless the user manually deletes those entries.

Parameter	Description
VID	Enter the VLAN ID here. This value must be between 1 and 4094.

Click the **Add** button to add a new entry based on the information entered.

Click the **Delete** button to remove a new entry based on the information entered.

Click the Clear by Port button to clear the information based on the port selected.

Click the Clear by MAC button to clear the information based on the MAC address entered.

Click the **Clear All** button to clear all the information in this table.

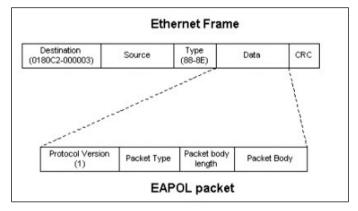

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

# 802.1X

#### 802.1X (Port-based and Host-based Access Control)

The IEEE 802.1X standard is a security measure for authorizing and authenticating users to gain access to various wired or wireless devices on a specified Local Area Network by using a Client and Server based access control model. This is accomplished by using a RADIUS server to authenticate users trying to access a network by relaying Extensible Authentication Protocol over LAN (EAPOL) packets between the Client and the Server.

The following figure represents a basic EAPOL packet:

#### Figure 9-4 The EAPOL Packet

Utilizing this method, unauthorized devices are restricted from connecting to a LAN through a port to which the user is connected. EAPOL packets are the only traffic that can be transmitted through the specific port until authorization is granted. The 802.1X access control method has three roles, each of which are vital to creating and up keeping a stable and working Access Control security method.

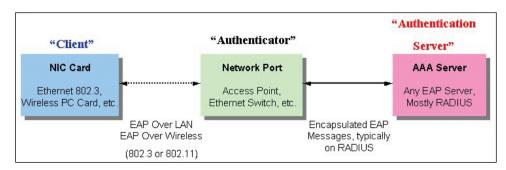

Figure 9-5 The three roles of 802.1X

The following section will explain the three roles of Client, Authenticator, and Authentication Server in greater detail.

#### Authentication Server

The Authentication Server is a remote device that is connected to the same network as the Client and Authenticator, must be running a RADIUS Server program and must be configured properly on the Authenticator (Switch). Clients connected to a port on the Switch must be authenticated by the Authentication Server (RADIUS) before attaining any services offered by the Switch on the LAN. The role of the Authentication Server is to certify the identity of the Client attempting to access the network by exchanging secure information between the RADIUS server and the Client through EAPOL packets and, in turn, informs the Switch whether or not the Client is granted access to the LAN and/or switches services.

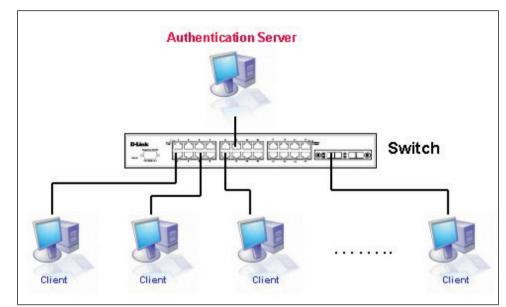

Figure 9-6 The Authentication Server

#### **Authenticator**

The Authenticator (the Switch) is an intermediary between the Authentication Server and the Client. The Authenticator serves two purposes when utilizing the 802.1X function. The first purpose is to request certification information from the Client through EAPOL packets, which is the only information allowed to pass through the Authenticator before access is granted to the Client. The second purpose of the Authenticator is to verify the information gathered from the Client with the Authentication Server, and to then relay that information back to the Client.

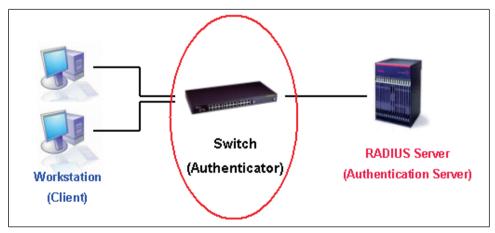

Figure 9-7 The Authenticator

Three steps must be implemented on the Switch to properly configure the Authenticator.

The 802.1X state must be enabled. (Security > 802.1X > 802.1X Global Settings)

- The 802.1X settings must be implemented by port (Security > 802.1X > 802.1X Port Settings)
- A RADIUS server must be configured on the Switch. (Security > RADIUS > RADIUS Server Settings)

#### <u>Client</u>

The Client is simply the end station that wishes to gain access to the LAN or switch services. All end stations must be running software that is compliant with the 802.1X protocol. For users running windows XP and windows Vista, that software is included within the operating system. All other users are required to attain 802.1X client software from an outside source. The Client will request access to the LAN and or Switch through EAPOL packets and, in turn will respond to requests from the Switch.

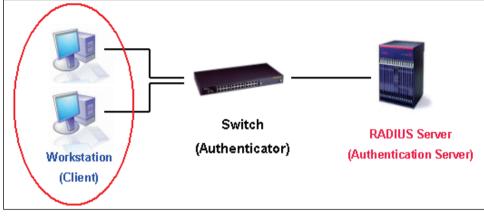

Figure 9-8 The Client

#### Authentication Process

Utilizing the three roles stated above, the 802.1X protocol provides a stable and secure way of authorizing and authenticating users attempting to access the network. Only EAPOL traffic is allowed to pass through the specified port before a successful authentication is made. This port is "locked" until the point when a Client with the correct username and password (and MAC address if 802.1X is enabled by MAC address) is granted access and therefore successfully "unlocks" the port. Once the port is unlocked, normal traffic is allowed to pass through the port. The following figure displays a detailed explanation of how the authentication process is completed between the three roles stated above.

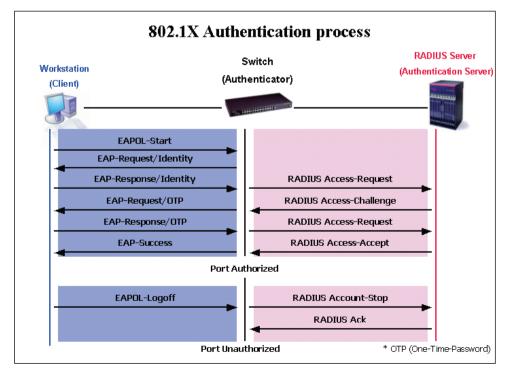

Figure 9-9 The 802.1X Authentication Process

The D-Link implementation of 802.1X allows network administrators to choose between two types of Access Control used on the Switch, which are:

- **Port-based Access Control** This method requires only one user to be authenticated per port by a remote RADIUS server to allow the remaining users on the same port access to the network.
- Host-based Access Control Using this method, the Switch will automatically learn up to a maximum of 448 MAC addresses by port and set them in a list. Each MAC address must be authenticated by the Switch using a remote RADIUS server before being allowed access to the Network.

#### Understanding 802.1X Port-based and Host-based Network Access Control

The original intent behind the development of 802.1X was to leverage the characteristics of point-topoint in LANs. As any single LAN segment in such infrastructures has no more than two devices attached to it, one of which is a Bridge Port. The Bridge Port detects events that indicate the attachment of an active device at the remote end of the link, or an active device becoming inactive. These events can be used to control the authorization state of the Port and initiate the process of authenticating the attached device if the Port is unauthorized. This is the Port-based Network Access Control.

#### Port-based Network Access Control

Once the connected device has successfully been authenticated, the Port then becomes Authorized, and all subsequent traffic on the Port is not subject to access control restriction until an event occurs that causes the Port to become Unauthorized. Hence, if the Port is actually connected to a shared media LAN segment with more than one attached device, successfully authenticating one of the attached devices effectively provides access to the LAN for all devices on the shared segment. Clearly, the security offered in this situation is open to attack.

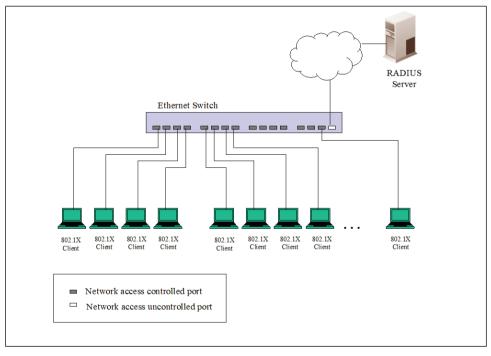

Figure 9-10 Example of Typical Port-based Configuration

#### Host-based Network Access Control

In order to successfully make use of 802.1X in a shared media LAN segment, it would be necessary to create "logical" Ports, one for each attached device that required access to the LAN. The Switch would regard the single physical Port connecting it to the shared media segment as consisting of a number of distinct logical Ports, each logical Port being independently controlled from the point of view of EAPOL exchanges and authorization state. The Switch learns each attached devices'

individual MAC addresses, and effectively creates a logical Port that the attached device can then use to communicate with the LAN via the Switch.

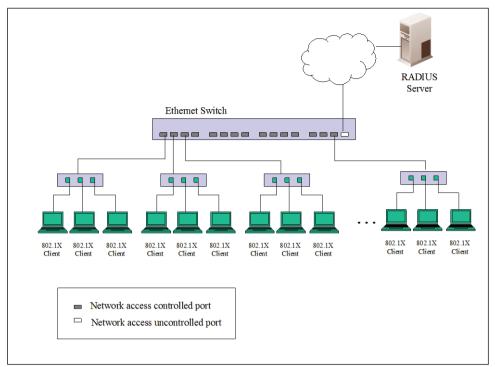

Figure 9-11 Example of Typical Host-based Configuration

# **802.1X Global Settings**

This window is used to view and configure the 802.1X global settings.

#### To view the following window, click Security > 802.1X > 802.1X Global Settings, as shown below:

802.1X Global Settin	gs	
802.1X Global Settings

Figure 9-13 802.1X Port Settings Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Direction	Select the direction here. Options to choose from are <b>Both</b> and <b>In</b> . This option configures the direction of the traffic on a controlled port as unidirectional ( <b>In</b> ) or bidirectional ( <b>Both</b> ). The <b>In</b> control direction is only valid when the <b>Host Mode</b> is configured as <b>Multi Host</b> in the Network Access Authentication Port Settings window.
Port Control	<ul> <li>Select the port control option here. Options to choose from are:</li> <li>ForceAuthorized - Specifies that the port is not controlled in both directions.</li> <li>Auto - Specifies that access to the port for the controlled direction needs to be authenticated.</li> <li>ForceUnauthorized - Specifies that access to the port for the controlled direction is blocked.</li> </ul>
Forward PDU	Select to enable or disable the forward PDU option here.
MaxReq	Enter the maximum required times value here. This value must be between 1 and 10. By default, this option is 2. This option configures the maximum number of times that the backend

Parameter	Description
	authentication state machine will retransmit an Extensible Authentication Protocol (EAP) request frame to the supplicant before restarting the authentication process.
PAE Authenticator	Select to enable or disable the PAE authenticator option here. This option configures a specific port as an IEEE 802.1X port access entity (PAE) authenticator.
Server Timeout	Enter the server timeout value here. This value must be between 1 and 65535 seconds. By default, this value is 30 seconds.
Supp Timeout	Enter the supplicant timeout value here. This value must be between 1 and 65535 seconds. By default, this value is 30 seconds.
TX Period	Enter the transmission period value here. This value must be between 1 and 65535 seconds. By default, this value is 30 seconds.

# **Authentication Session Information**

This window is used to view and configure the authentication session information.

Server Key Type	Plain Text	Server Key	32 chars	Apply
Total Entries: 1				
	Client		Server Key	
10.90.90.25			*****	Delete

Figure 9-27 Server RADIUS Dynamic Author Settings Window

The fields that can be configured for **Server RADIUS Dynamic Author Global Settings** are described below:

Parameter	Description
Dynamic Author	Select to enable or disable the dynamic author function here. Dynamic authorization allows an external policy server to dynamically send updates to a device.
Port	Enter the port number that is used for the data transmission of the update packets here. The range is from 1 to 65535.

Click the **Apply** button to accept the changes made.

The fields that can be configured for **Server RADIUS Dynamic Author Settings** are described below:

Parameter	Description
Client IP Address	Select and enter the IP address of the RADIUS client here.
Client Host Name	Select and enter the hostname of the RADIUS client here.
Server Key Type	<ul> <li>Select the RADIUS server key type here. Options to choose from are:</li> <li>Plain Text - Select this option to use the plain text RADIUS server key type.</li> <li>Encrypted - Select this option to use the encrypted RADIUS server key type.</li> </ul>
Server Key	<ul> <li>When Plain Text is selected as the key type, enter the key for the RADIUS server connection in the plain text form here. This key can be up to 32 characters long.</li> <li>When Encrypted is selected as the key type, enter the key for the RADIUS server connection in the encrypted form here. This key can be up to 64 characters long.</li> </ul>

Click the **Apply** button to add a new entry.

Click the **Delete** button to remove the specified entry.

# RADIUS

# **RADIUS Global Settings**

This window is used to view and configure the RADIUS global settings.

To view the following window, click Security > RADIUS > RADIUS Global Settings, as shown below:

RADIUS Global Settings			
RADIUS Global Settings			
Dead Time (0-1440)	0 min		Apply
RADIUS Global IPv4 Source Interface			
IPv4 RADIUS Source Interface State	Disabled 🗸		
IPv4 RADIUS Source Interface Type	VLAN 🗸	Interface ID (1-4094)	Apply
RADIUS Global IPv6 Source Interface			
IPv6 RADIUS Source Interface State	Disabled 🗸		
IPv6 RADIUS Source Interface Type	VLAN 🗸	Interface ID (1-4094)	Apply
RADIUS Server Attribute Settings			
RADIUS Server Attribute NAS-IP-Address	· · ·		
RADIUS Server Attribute Event-Timestamp	Disabled		Apply

#### Figure 9-28 RADIUS Global Settings Window

The fields that can be configured for **RADIUS Global Settings** are described below:

Parameter	Description
Dead Time	Enter the dead time value for the RADIUS server connection here. This is used to improve the authentication processing time by setting the dead time to skip unresponsive server host entries. The range is from 0 to 1440 minutes. By default, this value is 0 minutes. When this option is 0, the unresponsive server will not be marked as dead.

Click the **Apply** button to accept the changes made.

The fields that can be configured for RADIUS Global IPv4 Source Interface are described below:

Parameter	Description
IPv4 RADIUS Source Interface State	Select to enable or disable the state of the IPv4 RADIUS source interface here.
IPv4 RADIUS Source Interface Type	Select the IPv4 RADIUS source interface type here. Options to choose from are:
	<ul> <li>VLAN - Specifies the IPv4 RADIUS source interface type as VLAN.</li> </ul>
Interface ID	Enter the VLAN interface ID here. The range is from 1 to 4094.

Click the **Apply** button to accept the changes made.

The fields that can be configured for RADIUS Global IPv6 Source Interface are described below:

Parameter	Description
IPv6 RADIUS Source Interface State	Select to enable or disable the state of the IPv6 RADIUS source interface here.

Parameter	Description
IPv6 RADIUS Source Interface Type	Select the IPv6 RADIUS source interface type here. Options to choose from are:
	VLAN - Specifies the IPv6 RADIUS source interface type as VLAN.
Interface ID	Enter the VLAN interface ID here. The range is from 1 to 4094.

The fields that can be configured for **RADIUS Server Attribute Settings** are described below:

Parameter	Description
RADIUS Server Attribute NAS-IP-Address	Enter the IPv4 address of the RADIUS server attribute 4 in the RADIUS packet here.
RADIUS Server Attribute Event-Timestamp	Select to enable or disable the RADIUS server attribute event- timestamp function here.

Click the **Apply** button to accept the changes made.

# **RADIUS Server Settings**

This window is used to view and configure the RADIUS server settings.

To view the following window, click **Security > RADIUS > RADIUS Server Settings**, as shown below:

RADIUS Server Settings			_		_	
RADIUS Server Settings

To view the following window, click **Security > RADIUS > RADIUS Statistic**, as shown below:

Figure 9-32 RADIUS Statistic Window

The fields that can be configured are described below:

Parameter	Description
Group Server Name	Select the RADIUS group server name from this list here.

Click the **Clear** button to clear the information based on the selections made.

Click the Clear All button to clear all the information in this table.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

# TACACS+

# **TACACS+ Global Settings**

This window is used to display and configure the global TACACS+ server settings.

To view the following window, click **Security > TACACS+ > TACACS+ Global Settings**, as shown below:

TACACS+ Global Settings			
TACACS+ Global IPv4 Source Interface			
IPv4 TACACS+ Source Interface State IPv4 TACACS+ Source Interface Type	Disabled  VLAN	Interface ID (1-4094)	Apply
TACACS+ Global IPv6 Source Interface			
IPv6 TACACS+ Source Interface State IPv6 TACACS+ Source Interface Type	Disabled 🔽 VLAN 💟	Interface ID (1-4094)	Apply

Figure 9-33 TACACS+ Global Settings Window

The fields that can be configured in TACACS+ Global IPv4 Source Interface are described below:

Parameter	Description	
IPv4 TACACS+ Source Interface State	Select to enable or disable the state of the IPv4 TACACS+ source interface here.	
IPv4 TACACS+ Source Interface Type	Select the IPv4 TACACS+ source interface type here. Options to choose from are:	
	<ul> <li>VLAN - Specifies the IPv4 TACACS+ source interface type as VLAN.</li> </ul>	
Interface ID	Enter the VLAN interface ID here. The range is from 1 to 4094.	

Click the Apply button to accept the changes made.

The fields that can be configured in TACACS+ Global IPv6 Source Interface are described below:

Parameter	Description	
IPv6 TACACS+ Source Interface State	Select to enable or disable the state of the IPv6 TACACS+ source interface here.	
IPv6 TACACS+ Source Interface Type	Select the IPv6 TACACS+ source interface type here. Options to choose from are:	
	<ul> <li>VLAN - Specifies the IPv6 TACACS+ source interface type as VLAN.</li> </ul>	
Interface ID	Enter the VLAN interface ID here. The range is from 1 to 4094.	

# **TACACS+ Server Settings**

This window is used to view and configure the TACACS+ server settings.

To view the following window, click **Security > TACACS+ > TACACS+ Server Settings**, as shown below:

TACACS+ Server Sett	ings						
TACACS+ Server Settings -							
IP Address Port (1-65535) 49 Key Type Plain Text		○ IPv6 Address Timeout (1-255) Key	2013::1 5 sec 254 chars	Apply			
Total Entries: 1							
IPv4/IPv6 Address	Port	Timeout	Key				
192.168.1.1	49	5	*****	Delete			

Figure 9-34 TACACS+ Server Settings Window

The fields that can be configured are described below:

Parameter	Description		
IP Address	Enter the TACACS+ server's IPv4 address here.		
IPv6 Address	Enter the TACACS+ server's IPv6 address here.		
Port	Enter the port number used here. This value must be between 1 and 65535. By default, this value is 49.		
Timeout	Enter the timeout value here. This value must be between 1 and 255 seconds. By default, this value is 5 seconds.		
Кеу Туре	Select the key type that will be used here. Options to choose from are <b>Plain Text</b> and <b>Encrypted</b> .		
Кеу	Enter the key, used to communicate with the TACACS+ server, here. This key can be up to 254 characters long.		

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

# **TACACS+ Group Server Settings**

This window is used to view and configure the TACACS+ group server settings.

To view the following window, click **Security > TACACS+ > TACACS+ Group Server Settings**, as shown below:

TACACS+ Group Server Settings									
TACACS+ Group Server Setti	ings

Figure 9-36 TACACS+ Group Server Settings - Detail Window

The fields that can be configured are described below:

Parameter	Description
IPv4 TACACS+ Source Interface State	Select to enable or disable the state of the IPv4 TACACS+ source interface here.
IPv4 TACACS+ Source Interface Type	Select the IPv4 TACACS+ source interface type here. Options to choose from are:

Parameter	Description
	<ul> <li>VLAN - Specifies the IPv4 TACACS+ source interface type as VLAN.</li> </ul>
	<b>Interface ID</b> - Enter the VLAN interface ID for the IPv4 TACACS+ source interface here. The range is from 1 to 4094.
IPv6 TACACS+ Source Interface State	Select to enable or disable the state of the IPv6 TACACS+ source interface here.
IPv6 TACACS+ Source Interface Type	Select the IPv6 TACACS+ source interface type here. Options to choose from are:
	<ul> <li>VLAN - Specifies the IPv6 TACACS+ source interface type as VLAN.</li> </ul>
	<b>Interface ID</b> - Enter the VLAN interface ID for the IPv6 TACACS+ source interface here. The range is from 1 to 4094.

Click the **Delete** button to remove the specified entry.

Click the **Back** button to return to the previous window.

# **TACACS+** Statistic

This window is used to view and clear the TACACS+ statistic information.

To view the following window, click Security > TACACS+ > TACACS+ Statistic, as shown below:

	_						
CACS+ Statistic							
Group Server Name Please Select Clear All							
Total Entries: 1							
TACACS+ Server Address	State	Socket Opens	Socket Closes	Total Packets Sent	Total Packets Recv	Reference Count	

Figure 9-37 TACACS+ Statistic Window

The fields that can be configured are described below:

Parameter	Description
Group Server Name	Select the TACACS+ group server name from this list here.

Click the Clear button to clear the information based on the group selected.

Click the Clear All button to clear all the information in this table.

Click the **Clear** button to clear all the information for the specific port.

# IMPB

The IP network layer uses a four-byte address. The Ethernet link-layer uses a six-byte MAC address. Binding these two address types together allows the transmission of data between the layers. The primary purpose of IP-MAC-Port Binding (IMPB) is to restrict the access to a switch to a number of authorized users. Authorized clients can access a switch's port by either checking the pair of IP-MAC addresses with the pre-configured database or if DHCP snooping has been enabled in which case the switch will automatically learn the IP/MAC pairs by snooping DHCP packets and saving them to the IMPB white list. If an unauthorized user tries to access an IP-MAC binding enabled port, the system

will block the access by dropping its packet. Active and inactive entries use the same database. The function is port-based, meaning a user can enable or disable the function on the individual port.

## IPv4

## **DHCPv4** Snooping

### **DHCP Snooping Global Settings**

This window is used to view and configure the DHCP snooping global settings.

To view the following window, click **Security > IMPB > IPv4 > DHCPv4 Snooping > DHCP Snooping Global Settings**, as shown below:

DHCP Snooping Global Settin	ngs		
DHCP Snooping Global Settings			
DHCP Snooping	CEnabled	Oisabled	
Information Option Allow Untrusted	Enabled	Disabled	
Source MAC Verification	Enabled	Disabled	
Station Move Deny	Enabled	Oisabled	Apply

The fields that can be configured are described below:

Parameter	Description			
DHCP Snooping	Select to enable or disable the DHCP snooping global status.			
Information Option Allow Untrusted	Select to enable or disable the option to globally allow DHCP packets with the relay Option 82 on the untrusted interface.			
Source MAC Verification	Select to enable or disable the verification that the source MAC address in a DHCP packet matches the client hardware address.			
Station Move Deny	Select to enable or disable the DHCP snooping station move state. When DHCP snooping station move is enabled, the dynamic DHCP snooping binding entry with the same VLAN ID and MAC address on the specific port can move to another port if it detects that a new DHCP process belong to the same VLAN ID and MAC address.			

### **DHCP Snooping Port Settings**

This window is used to view and configure the DHCP snooping port settings.

#### To view the following window, click **Security > IMPB > IPv4 > DHCPv4 Snooping > DHCP Snooping Port Settings**, as shown below:

DHCP Snooping Port Settin	gs		
DHCP Snooping Port Settings			
Unit	1		
From Port	eth1/0/1		
To Port	eth1/0/1		
Entry Limit (0-1024)	No Limit		
Rate Limit (1-300)	No Limit		
Trusted	No		Apply
Port	Trusted	Rate Limit	Entry Limit
eth1/0/1	No	No Limit	No Limit
eth1/0/2	No	No Limit	No Limit

eth1/0/16	No	No Limit	No Limit
eth1/0/17	No	No Limit	No Limit
eth1/0/18	No	No Limit	No Limit
eth1/0/19	No	No Limit	No Limit
eth1/0/20	No	No Limit	No Limit
eth1/0/21	No	No Limit	No Limit
eth1/0/22	No	No Limit	No Limit
eth1/0/23	No	No Limit	No Limit

#### Figure 9-39 DHCP Snooping Port Settings Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Entry Limit	Enter the entry limit value here. This value must be between 0 and 1024. Tick the <b>No Limit</b> option to disable the function.
Rate Limit	Enter the rate limit value here. This value must be between 1 and 300. Tick the <b>No Limit</b> option to disable the function.
Trusted	Select the trusted option here. Options to choose from are <b>No</b> and <b>Yes</b> . Ports connected to the DHCP server or to other switches should be configured as trusted interfaces. The ports connected to DHCP clients should be configured as untrusted interfaces. DHCP snooping acts as a firewall between untrusted interfaces and DHCP servers.

### **DHCP Snooping VLAN Settings**

This window is used to view and configure the DHCP snooping VLAN settings.

To view the following window, click **Security > IMPB > IPv4 > DHCPv4 Snooping > DHCP Snooping VLAN Settings**, as shown below:

DHCP Snooping VLAN Settings							
DHCP Snooping VLAN Settings							
VID List	1, 4-6		State Enabled 💌	Apply			
DHCP Snooping Enable	ed VID :	1					

Figure 9-40 DHCP Snooping VLAN Settings Window

The fields that can be configured are described below:

Parameter	Description		
VID List	Enter the VLAN ID list used here.		
State	Select to enable or disable the DHCP snooping VLAN setting here.		

Click the **Apply** button to accept the changes made.

### **DHCP Snooping Database**

This window is used to view and configure the DHCP snooping database settings.

To view the following window, click **Security > IMPB > IPv4 > DHCPv4 Snooping > DHCP Snooping Database**, as shown below:

DHCP Snooping Database	8								
DHCP Snooping Database									
Write Delay (60- 86400)	Vrite Delay (60- 86400) 300 sec Default								
Store DHCP Snooping Database	Store DHCP Snooping Database								
URL		TFTP A URL beginning with this prefix //location/filename		Apply Clear					
Load DHCP Snooping Database									
URL	URL TFTP A URL beginning with this prefix //location/filename								
Last ignored Bindings counters									
Binding Collisions	0	Expired Lease	0						
Invalid Interfaces	0	Unsupported VLAN	0						
Parse Failures	0	Checksum Errors	0	Clear					

Figure 9-41 DHCP Snooping Database Window

The fields that can be configured for **DHCP Snooping Database** are described below:

Parameter	Description
Write Delay	Enter the write delay time value here. This value must be between 60 and 86400 seconds. By default, this value is 300 seconds. Select the <b>Default</b> option to use the default value.

The fields that can be configured for Store DHCP Snooping Database are described below:

Parameter	Description
URL	Select the location from the drop-down list and enter the URL where the DHCP snooping database will be stored to here. Location to choose from is <b>TFTP</b> .

Click the **Apply** button to accept the changes made.

Click the **Clear** button to clear the stored DHCP snooping database.

The fields that can be configured for Load DHCP Snooping Database are described below:

Parameter	Description
URL	Select the location from the drop-down list and enter the URL where the DHCP snooping database will be loaded from here. Location to choose from is <b>TFTP</b> .

Click the **Apply** button to accept the changes made.

Click the **Clear** button to clear all the counter information.

### **DHCP Snooping Binding Entry**

This window is used to view and configure the DHCP snooping binding entries.

To view the following window, click **Security > IMPB > IPv4 > DHCPv4 Snooping > DHCP Snooping Binding Entry**, as shown below:

DHCP Snooping Binding En	try		_	_		
DHCP Snooping Manual Binding						
MAC Address	00-84-57-00-00	0-00				
VID (1-4094)						
IP Address	· · ·	•				
Unit	1					
Port	eth1/0/1	•				
Expiry (60-4294967295)		sec				
						Add
Total Entries: 1						
MAC Address	VID	IP Address	Port	Expiry	Туре	
00-84-57-00-00-00	1	10.90.90.254	eth1/0/1	3600	dhcp-snooping	Delete
					1	1/1  < < 1 > >  Go

Figure 9-42 DHCP Snooping Binding Entry Window

Parameter	Description
MAC Address	Enter the MAC address of the DHCP snooping binding entry here.
VID	Enter the VLAN ID of the DHCP snooping binding entry here. This value must be between 1 and 4094.
IP Address	Enter the IP address of the DHCP snooping binding entry here.
Unit	Select the switch unit that will be used for this configuration here.
Port	Select the appropriate port used for the configuration here.
Expiry	Enter the expiry time value used here. This value must be between 60 and 4294967295 seconds.

The fields that can be configured are described below:

Click the **Add** button to add a new entry based on the information entered.

Click the **Delete** button to remove the specified entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **Dynamic ARP Inspection**

### **ARP Access List**

This window is used to view and configure the dynamic ARP inspection settings.

To view the following window, click **Security > IMPB > IPv4 > Dynamic ARP Inspection > ARP Access List**, as shown below:

ARP Access List		
ARP Access List		
ARP Access List Name	32 chars	Add
Total Entries: 1		
	ARP Access List Name	
	ARP-Access-List	Edit Delete

Figure 9-43 ARP Access List Window

The fields that can be configured are described below:

Parameter	Description		
ARP Access List Name	Enter the ARP access list name used here. This name can be up to 32 characters long.		

Click the Add button to add a new entry based on the information entered.

Click the Edit button to re-configure the specific entry.

Click the **Delete** button to remove the specified entry.

After clicking the **Edit** button, the following window will appear.

ARP Acc	cess List		_	_	_				
Action       Permit         IP       Any       Sender IP         MAC       Any       Sender MAC         Sender MAC       Sender MAC         ARP Access List Name: ARP-Access-List       Back									
Total En	Total Entries: 1								
	Action	ІР Туре	Sender IP	Sender IP Mask	MAC Type	Sender MAC	Sender MAC Mask		
	Permit	Any	-		Any		1.51	Delete	

Figure 9-44 ARP Access List - Edit Window

Parameter	Description
Action	Select the action that will be taken here. Options to choose from are <b>Permit</b> and <b>Deny</b> .
IP	Select the type of sender IP address that will be used here. Options to choose from are <b>Any</b> , <b>Host</b> , and <b>IP with Mask</b> .
Sender IP	After selecting the <b>Host</b> or <b>IP with Mask</b> options as the type of <b>IP</b> , enter the sender IP address used here.

The fields that can be configured are described below:

Parameter	Description
Sender IP Mask	After selecting the <b>IP with Mask</b> option as the type of <b>IP</b> , enter the sender IP mask used here.
MAC	Select the type of sender MAC address that will be used here. Options to choose from are <b>Any</b> , <b>Host</b> , and <b>MAC with Mask</b> .
Sender MAC	After selecting the <b>Host</b> or <b>MAC</b> with <b>Mask</b> options as the type of <b>MAC</b> , enter the sender MAC address used here.
Sender MAC Mask	After selecting the <b>MAC with Mask</b> option as the type of <b>MAC</b> , enter the sender MAC mask used here.

Click the **Back** button to return to the previous page.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

#### **ARP Inspection Settings**

This window is used to view and configure the ARP inspection settings.

To view the following window, click **Security > IMPB > IPv4 > Dynamic ARP Inspection > ARP Inspection Settings**, as shown below:

ARP Inspection	Settings	_		
ARP Inspection Valid	lation			
Src-MAC	OEnabled	<ul> <li>Disabled</li> </ul>		
Dst-MAC	Enabled	Disabled		
IP	OEnabled	<ul> <li>Disabled</li> </ul>		Apply
ARP Inspection VLA	N Logging			
Total Entries: 1				
VID	ACL Loggin	9	DHCP Logging	
2	None		None	Edit
				1/1  < < 1 > >  Go
ARP Inspection Filter	ŗ			
ARP Access List Nar	ne	32 chars		
VID List		1, 4-6		
Static ACL		No		Add Delete
Total Entries: 1				
VID		ARP Acce	ss List Name	Static ACL
1		ARI	P-ACL	No
				1/1 < < 1 > > Go

Figure 9-45 ARP Inspection Settings Window

The fields that can be configured for ARP Inspection Validation are described below:

Parameter	Description
Src-MAC	Select to enable of disable the source MAC option here. This option specifies to check for ARP requests and response packets and the consistency of the source MAC address in the Ethernet header against the sender MAC address in the ARP payload.
Dst-MAC	Select to enable of disable the destination MAC option here. This option specifies to check for ARP response packets and the consistency of the destination MAC address in the Ethernet header against the target MAC address in the ARP payload.
IP	Select to enable of disable the IP option here. This option specifies to check the ARP body for invalid and unexpected IP addresses. It

Parameter	Description
	also specifies to check the validity of IP address in the ARP payload. The sender IP in both the ARP request and response and target IP in the ARP response are validated. Packets destined for the IP addresses 0.0.0.0, 255.255.255.255, and all IP multicast addresses are dropped. Sender IP addresses are checked in all ARP requests and responses, and target IP addresses are checked only in ARP responses.

Click the **Edit** button to configure the ARP inspection VLAN logging settings.

After clicking the **Edit** button, the following fields can be configured:

Parameter	Description
ACL Logging	Select the ACL logging action here. This specifies the logging criteria for packets that are dropped or permitted based on ACL matches. Options to choose from are:
	<ul> <li>Deny - Specifies logging when denied by the configured ACL.</li> <li>Permit - Specifies logging when permitted by the configured ACL.</li> <li>All - Specifies logging when permitted or denied by the configured ACL.</li> <li>None - Specifies that ACL-matched packets are not logged.</li> </ul>
DHCP Logging	Select the DHCP logging action here. This specifies the logging criteria for packets dropped or permitted based on matches against the DHCP bindings. Options to choose from are:
	<ul> <li>Deny - Specifies logging when denied by DHCP bindings.</li> <li>Permit - Specifies logging when permitted by DHCP bindings.</li> <li>All - Specifies logging when permitted or denied by DHCP bindings.</li> <li>None - Specifies to prevent the logging of all packets permitted or denied by DHCP bindings.</li> </ul>

Click the **Apply** button to accept the changes made.

The fields that can be configured for **ARP Inspection Filter** are described below:

Parameter	Description
ARP Access List Name	Enter the ARP access list name used here. This name can be up to 32 characters long.
VID List	Enter the VLAN ID list used here.
Static ACL	Select whether to use a static ACL or not here by either selecting <b>Yes</b> or <b>No</b> .

Click the **Add** button to add a new entry based on the information entered.

Click the **Delete** button to remove an entry based on the information entered.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **ARP Inspection Port Settings**

This window is used to view and configure the ARP inspection port settings.

#### To view the following window, click **Security > IMPB > IPv4 > Dynamic ARP Inspection > ARP Inspection Port Settings**, as shown below:

Unit	1	-	From Port		eth1/0/1		To Port	eth1/0/1	T
Rate Limit (1-150)		pps	Burst Inter	rval (1-15)		Vone

eth1/0/25		Untrusted			15			1	

#### Figure 9-46 ARP Inspection Port Settings Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Rate Limit	Enter the rate limit value here. This value must be between 1 and 150 packets per seconds.
Burst Interval	Enter the burst interval value here. This value must be between 1 and 15. Tick the <b>None</b> option to disable the option.
Trust State	Select to enable or disable the trust state here.

Click the **Apply** button to accept the changes made.

Click the **Set to Default** button to change the information to the default values.

### **ARP Inspection VLAN**

This window is used to view and configure the ARP inspection VLAN settings.

To view the following window, click **Security > IMPB > IPv4 > Dynamic ARP Inspection > ARP Inspection VLAN**, as shown below:

ARP Inspection VLAN		
VID List [1, 4-6	State Enabled	Apply
ARP Inspection Enabled VID : 1		

Figure 9-47 ARP Inspection VLAN Window

Parameter	Description
VID List	Enter the VLAN ID list used here.
State	Select to enable or disable the ARP inspection option's state for the specified VLAN here.

The fields that can be configured are described below:

Click the **Apply** button to accept the changes made.

#### **ARP Inspection Statistics**

This window is used to view and clear the ARP inspection statistics information.

To view the following window, click **Security > IMPB > IPv4 > Dynamic ARP Inspection > ARP Inspection Statistics**, as shown below:

RP Ins	spection St	atistics			_		_	_	_
VID List		1, 4-6		]				Clear by	y VLAN Clear All
Total En	ntries: 1								
		Dropped	DHCP Drops	ACL Drops	DHCP Permits	ACL Permits	Source MAC Failures	Dest MAC Failure	IP Validation Failure
VLAN 1		Dropped 0	DHCP Drops	ACL Drops	DHCP Permits 0	ACL Permits	Source MAC Failures 0	Dest MAC Failure 0	IP Validation Failure 0

#### Figure 9-48 ARP Inspection Statistics Window

The fields that can be configured are described below:

Parameter	Description
VID List	Enter the VLAN ID list used here.

Click the Clear by VLAN button to clear the information based on the VLAN ID(s) entered.

Click the Clear All button to clear all the information in this table.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **ARP Inspection Log**

This window is used to view, configure, and clear the ARP inspection log information.

To view the following window, click **Security > IMPB > IPv4 > Dynamic ARP Inspection > ARP Inspection Log**, as shown below:

ARP Inspection Log				
ARP Inspection Log				
Log Buffer (1-1024)	32			Apply Clear Log
Total Entries: 0				
Port	VLAN	Sender IP	Sender MAC	Occurrence
				· · · · · · · · · · · · · · · · · · ·

Figure 9-49 ARP Inspection Log Window

The fields that can be configured are described below:

Parameter	Description
Log Buffer	Enter the log's buffer value used here. This value must be between 1 and 1024. By default, this value is 32.

Click the **Apply** button to accept the changes made.

Click the **Clear Log** button to clear the log.

### **IP Source Guard**

#### **IP Source Guard Port Settings**

This window is used to view and configure the IP source guard port settings.

To view the following window, click **Security > IMPB > IPv4 > IP Source Guard > IP Source Guard Port Settings**, as shown below:

IP Source Guard	Port Settings			
Unit From Port State	1 eth1/0/1 Enabled	To Port Validation	eth1/0/1 💌 IP 💌	Apply
	Port		Validation Type	
	eth1/0/10		ip	

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
State	Select to enable or disable the IP source guard's state for the specified port(s) here.
Validation	Select the validation method used here. Options to choose from are <b>IP</b> and <b>IP-MAC</b> . Selecting <b>IP</b> means that the IP address of the received packets will be checked. Selecting <b>IP-MAC</b> means that the IP address and the MAC address of the received packets will be checked.

### **IP Source Guard Binding**

This window is used to view and configure the IP source guard binding settings.

To view the following window, click **Security > IMPB > IPv4 > IP Source Guard > IP Source Guard Binding**, as shown below:

Figure 9-51 IP Source Guard Binding Window

The fields that can be configured for IP Source Binding Settings are described below:

Parameter	Description
MAC Address	Enter the MAC address of the binding entry here.
VID	Enter the VLAN ID of the binding entry here.
IP Address	Enter the IP address of the binding entry here.
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.

Click the **Apply** button to accept the changes made.

The fields that can be configured for IP Source Binding Entry are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this query here.
From Port / To Port	Select the appropriate port range used for the query here.
IP Address	Enter the IP address of the binding entry here.
MAC Address	Enter the MAC address of the binding entry here.
VID	Enter the VLAN ID of the binding entry here.
Туре	Select the type of binding entry to find here. Options to choose from are:
	<ul> <li>All - Specifies that all the DHCP binding entries will be displayed.</li> <li>DHCP Snooping - Specifies to display the IP-source guard binding entry learned by DHCP binding snooping.</li> </ul>

Parameter	Description
	<ul> <li>Static - Specifies to display the IP-source guard binding entry that is manually configured.</li> </ul>

Click the **Find** button to locate a specific entry based on the information entered.

Click the **Delete** button to remove the specified entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

### **IP Source Guard HW Entry**

This window is used to view the IP source guard hardware entries.

To view the following window, click **Security > IMPB > IPv4 > IP Source Guard > IP Source Guard HW Entry**, as shown below:

P Source Guard H	V Entry				_
Unit 1	From Port	eth1/0/1 💌	To Port eth1/0/1		Find
Total Entries: 1

#### Figure 9-53 IP-MAC-Port Binding Settings Window

The fields that can be configured for IP-MAC-Port Binding Trap Settings are described below:

Parameter	Description
Trap State	Select the enable or disable the IP-MAC-Port binding option's trap state.

Click the **Apply** button to accept the changes made.

The fields that can be configured for IP-MAC-Port Binding Port Settings are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Mode	Select the mode of access control that will be used here. Options to choose from are <b>Disabled</b> , <b>Strict</b> , and <b>Loose</b> . When a port is enabled for IMPB strict-mode access control, a host can only access the port after the host sends ARP or IP packets and the ARP packet or IP packet sent by the host passes the binding check. To pass the binding check, the source IP address, source

Parameter	Description
	MAC address, VLAN ID, and arrival port number must match any of the entries defined by either the IP source guard static binding entry or the DHCP snooping learned dynamic binding entry. When a port is enabled for IMPB loose-mode access control, a host will be denied to access the port after the host sends ARP or IP packets and the ARP packet or IP packet sent by the host does not pass the binding check. To pass the binding check, the source IP address, source MAC address, VLAN ID, and arrival port must match any of the entries defined by either the IP source guard static binding entry or the DHCP snooping learned dynamic binding entry.

#### **IP-MAC-Port Binding Blocked Entry**

This window is used to view and clear the IP-MAC-Port binding blocked entry table.

To view the following window, click **Security > IMPB > IPv4 > Advanced Settings > IP-MAC-Port Binding Blocked Entry**, as shown below:

IP-MAC-Port Binding Bloc	ked Entry		
Clear  O by Port Unit	From Port eth1/0/1  To Port	t eth1/0/1 🔍 🔿 by MAC	Clear All Apply
Total Entries: 0			
Port	VLAN	MAC Address	

Figure 9-54 IP-MAC-Port Binding Blocked Entry Window

The fields that can be configured are described below:

Parameter	Description
Clear All	Leave all fields unselected and click the <b>Apply</b> button to clear all IMPB blocked entry information.
Clear by Port	Select this option to clear the entry table based on the port(s) selected.
Unit	Select the switch unit that will be clear here.
From Port / To Port	Select the appropriate port range that will be cleared here.
Clear by MAC	Select this option to clear the entry table based on the MAC address entered. Enter the MAC address that will be cleared in the space provided.
Clear All	Select this option to clear all entries that contain MAC addresses.

## IPv6

#### **IPv6 Snooping**

This window is used to view and configure the IPv6 snooping settings.

To view the following window, click **Security > IMPB > IPv6 > IPv6 Snooping**, as shown below:

IPv6 Snooping		_	
Station Move Setting			
Station Move Permit			Apply
IPv6 Snooping Policy Settings			
Policy Name	32 chars		
Limit Address Count (0-511)	Vo Limit		
Protocol	Disabled		
VID List	1, 4-6		Apply
Total Entries: 1			
Snooping Policy Protocol	Limit Address Count	Target VLAN	
Policy	511	1	Edit Delete

Figure 9-55 IPv6 Snooping Window

The fields that can be configured for Station Move Setting are described below:

Parameter	Description
Station Move	Select the station move options here. Options to choose from are <b>Permit</b> and <b>Deny</b> .

Click the **Apply** button to accept the changes made.

Parameter	Description
Policy Name	Enter the IPv6 snooping policy name used here. This name can be up to 32 characters long.
Limit Address Count	Enter the address count limit value used here. This value must be between 0 and 511. Tick the <b>No Limit</b> option to disable this option.
Protocol	Select the protocol that will be associated with this policy here. Options to choose from are <b>Disabled</b> , <b>DHCP</b> , <b>NDP</b> , and <b>All</b> . DHCPv6 Snooping sniffs the DHCPv6 packets sent between the DHCPv6 client and server in the address assigning procedure. When a DHCPv6 client successfully got a valid IPv6 address, DHCPv6 snooping creates its binding database. ND Snooping is designed for a stateless auto-configuration assigned IPv6 address and manually configured IPv6 address. Before assigning an IPv6 address, the host must perform Duplicate Address Detection first. ND snooping detects DAD messages (DAD NS and DAD NA) to build its binding database. The NDP packet (NS and NA) is also used to detect whether a host is still reachable and determine whether to delete a binding or not.
VID List	Enter the VLAN ID list used here.

The fields that can be configured for IPv6 Snooping Policy Settings are described below:

Click the **Apply** button to accept the changes made.

Click the **Edit** button to re-configure the specific entry.

Click the **Delete** button to remove the specified entry.

#### **IPv6 ND Inspection**

This window is used to view and configure the IPv6 ND inspection settings.

To view the following window, click **Security > IMPB > IPv6 > IPv6 ND Inspection**, as shown below:

IPv6 ND Inspection								
IPv6 ND Inspection								
Policy Name	3	32 chars						
Device Role	[	Host 💌						
Validate Source-MAC	[	Disabled 💌						
Target Port	Unit	1 💌	From Port	eth1/0/1 [	<b>*</b>	To Port	eth1/0/1 💌	Apply
Total Entries: 1								
Policy Name	Device Role		Validate Source-MAC		Target Port			
Polocy	Host		Disabled				Edit D	elete

Figure 9-56 IPv6 ND Inspection Window

The fields that can be configured are described below:

Parameter	Description
Policy Name	Enter the policy name used here. This name can be up to 32 characters long.
Device Role	Select the device role here. Options to choose from are <b>Host</b> and <b>Router</b> . By default, the device's role is set as host and inspection for NS and NA messages are performed. If the device role is set as router, the NS and NA inspection is not performed. When performing NS/NA inspection, the message will be verified against the dynamic binding table learned from the ND protocol or from the DHCP.
Validate Source-MAC	Select to enable or disable the validation of the source MAC address option here. When the Switch receives an ND message that contains a link-layer address, the source MAC address is checked against the link-layer address. The packet will be dropped if the link-layer address and the MAC addresses are different from each other.
Target Port	Tick this option to specify the target port.
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.

Click the **Apply** button to accept the changes made.

Click the Edit button to re-configure the specific entry.

Click the **Delete** button to remove the specified entry.

#### IPv6 RA Guard

This window is used to view and configure the IPv6 Router Advertisement (RA) guard settings.

To view the following window, click **Security > IMPB > IPv6 > IPv6 RA Guard**, as shown below:

IPv6 RA Guard			_		_
IPv6 RA Guard					
Policy Name	32 char	S			
Device Role	Host	V			
Match IPv6 Access List	Pleas	e Select			
Target Port	Unit 1	From Port eth1/0/1	✓ To Port	eth1/0/1	Apply
Total Entries: 1					
Policy Name	Device Role	Match IPv6 Access List	Target Port		
Policy	Host	Extended-IPv6-ACL	eth1/0/10	Edit	Delete

The fields that can be configured are described below:

Parameter	Description
Policy Name	Enter the policy name here. This name can be up to 32 characters long.
Device Role	Select the device role here. Options to choose from are <b>Host</b> and <b>Router</b> . By default, the device's role is <b>Host</b> , which will block all the RA packets. If the device's role is <b>Router</b> , RA packets will be forwarded according to the port's bound ACL.
Match IPv6 Access List	Enter or select the IPv6 access list to match here.
Target Port	Tick this option to specify the target port.
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.

Click the **Apply** button to accept the changes made.

Click the Edit button to re-configure the specific entry.

Click the **Delete** button to remove the specified entry.

#### **IPv6 DHCP Guard**

This window is used to view and configure the IPv6 DHCP guard settings.

To view the following window, click Security > IMPB > IPv6 > IPv6 DHCP Guard, as shown below:

IPv6 DHCP Guard	_	_	_				_	_	_	
IPv6 DHCP Guard										
Policy Name		32 chars								
Device Role		Client	~							
Match IPv6 Access List		Please Se	lect							
Target Port	Unit	1 🗸		From Port	eth1/0/1	$\checkmark$	To Port	eth1/0/1	~	Apply

Policy	Client		Ext	ended-IPv6-AC	CL .	eth1/	0/11		Edit	Delete

Figure 9-58 IPv6 DHCP Guard Window

The fields that can be configured are described below:

Parameter	Description
Policy Name	Enter the policy name here. This name can be up to 32 characters long.
Device Role	Select the device role here. Options to choose from are <b>Client</b> and <b>Server</b> . By default, the device's role is set as <b>Client</b> , which will block all the DHCPv6 packets from the DHCPv6 Server. If the device's role is set as <b>Server</b> , DHCPv6 Server packets will be forwarded according to the port's bound ACL.
Match IPv6 Access List	Enter or select the IPv6 access list to match here.
Target Port	Tick this option to specify the target port.
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.

Click the **Apply** button to accept the changes made.

Click the Edit button to re-configure the specific entry.

Click the **Delete** button to remove the specified entry.

#### **IPv6 Source Guard**

#### **IPv6 Source Guard Settings**

This window is used to view and configure the IPv6 source guard settings.

To view the following window, click **Security > IMPB > IPv6 > IPv6 Source Guard > IPv6 Source Guard > IPv6 Source Guard Settings**, as shown below:

IPv6 Source Guard	Settings		_				
IPv6 Source Guard Settin	ngs						
Policy Name		32 chars					
Global Auto-Configure Address		Permit 💌					
Link Local Traffic		Deny 💌					
Target Port	Unit	1 💌	From Po	ort eth1/0/1 💌	To Port	eth1/0/1 💌	Apply
Total Entries: 1							
Policy Name	Glob	al Auto-Configure Address		Link Local Traffic	Target Port		
Policy		Permit		Deny		Edit	Delete

The fields that can be configured are described below:

Parameter	Description
Policy Name	Enter the policy name here. This name can be up to 32 characters long.
Global Auto-Configure Address	Select to permit of deny data traffic from the auto-configured global address. It is useful when all global addresses on a link are assigned by DHCP and the administrator that wants to block hosts with self-configured addresses from sending traffic.
Link Local Traffic	Select to permit of deny hardware permitted data traffic send by the link-local address.
Target Port	Tick this option to specify the target port.
Unit	Select the switch unit that will be used for this configuration here.

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.

Click the **Edit** button to re-configure the specific entry.

Click the **Delete** button to remove the specified entry.

#### **IPv6 Neighbor Binding**

This window is used to view and configure the IPv6 neighbor binding settings.

To view the following window, click **Security > IMPB > IPv6 > IPv6 Source Guard > IPv6 Neighbor Binding**, as shown below:

IPv6 Neighbor Bindin	g					
IPv6 Neighbor Binding Setti	ings					
MAC Address	00-84-57-00-00-00					
VID (1-4094)						
IPv6 Address	2233::1

2233::1	00-84-57-00-00-00	eth1/0/10	1	Static	N/A	Delete
					1/1	< < 1 > >  Go

Figure 9-60 IPv6 Neighbor Binding Window

The fields that can be configured for IPv6 Neighbor Binding Settings are described below:

Parameter	Description
MAC Address	Enter the MAC address used here.
VID	Enter the VLAN ID used here. This value must be between 1 and 4094.
IPv6 Address	Enter the IPv6 address used here.
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.

Click the **Apply** button to accept the changes made.

The fields that can be configured for IPv6 Neighbor Binding Entry are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this search here.
From Port / To Port	Select the appropriate port range used for the search here.
IPv6 Address	Enter the IPv6 address to find here.
MAC Address	Enter the MAC address to find here.
VID	Enter the VLAN ID to find here.

Click the **Find** button to locate a specific entry based on the information entered.

Click the **Delete** button to remove the specified entry.

# **DHCP Server Screening**

This function allows users to not only to restrict all DHCP server packets but also to receive any specified DHCP server packet by any specified DHCP client. It is useful when one or more DHCP servers are present on the network and both provide DHCP services to different distinct groups of clients.

The first time the DHCP filter is enabled it will create both an access profile entry and an access rule per port entry, it will also create other access rules. These rules are used to block all DHCP server packets. In addition to a permit DHCP entry it will also create one access profile and one access rule entry the first time the DHCP client MAC address is used as the client MAC address. The Source IP address is the same as the DHCP server's IP address (UDP port number 67). These rules are used to permit the DHCP server packets with specific fields, which the user has configured.

When DHCP server filter function is enabled all DHCP server packets will be filtered from a specific port.

#### **DHCP Server Screening Global Settings**

This window is used to view and configure the DHCP server screening global settings.

To view the following window, click **Security > DHCP Server Screening > DHCP Server Screening Global Settings**, as shown below:

DHCP Server Screening Global Settings					
Trap Settings					
Trap State Disabled					Apply

#### Figure 9-62 DHCP Server Screening Port Settings Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.

Parameter	Description
State	Select to enable or disable the DHCP server screening function on the port(s) specified.
Server IP	Enter the DHCP server's IP address here.
Profile Name	Enter the DHCP server screening profile that will be used for the port(s) specified here.

Click the **Delete** button to remove the specified entry.

## **ARP Spoofing Prevention**

This window is used to view and configure the ARP spoofing prevention settings. When an entry is created, ARP packets whose sender IP address matches the gateway IP address, of an entry, but its sender MAC address field does not match the gateway MAC address, of the entry, will be dropped by the system. The ASP will bypass the ARP packets whose sender IP address doesn't match the configured gateway IP address.

If an ARP address matches a configured gateway's IP address, MAC address, and port list, then bypass the Dynamic ARP Inspection (DAI) check no matter if the receiving port is ARP trusted or untrusted.

To view the following window, click **Security > ARP Spoofing Prevention**, as shown below:

ARP Spoofing Prevention

From Port / To Port	Select the appropriate port range used for the configuration her		
Gateway IP	Enter the gateway's IP address used here.		
Gateway MAC	Enter the gateway's MAC address used here.		

Click the **Delete** button to remove the specified entry.

# **BPDU Attack Protection**

This window is used to view and configure the BPDU attack protection settings. In generally, there are two states in the BPDU attack protection function. One is normal state, and another is under attack state. The under attack state have three modes: drop, block, and shutdown. A BPDU protection enabled port will enter an under attack state when it receives one STP BPDU packet and it will take action based on the configuration. Thus, BPDU protection can only be enabled on the STP-disabled port.

BPDU protection has a higher priority than the FBPDU setting configured by configure STP command in the determination of BPDU handling. That is, when FBPDU is configured to forward STP BPDU but BPDU protection is enabled, then the port will not forward STP BPDU.

BPDU protection also has a higher priority than the BPDU tunnel port setting in determination of BPDU handling. When a port is configured as a BPDU tunnel port for STP, it will forward STP BPDU but if the port is BPDU protection enabled, the port will not forward STP BPDUs.

PDO Allack PIOLOCI	tion Global Settings

To view the following window, click **Security > BPDU Attack Protection**, as shown below:

Figure 9-64 BPDU Attack Protection Window

Parameter	Description
BPDU Attack Protection State	Select to enable or disable the BPDU attack protection feature's global state here.
BPDU Attack Protection Trap State	Select to enable or disable the BPDU attack protection feature's trap state here.
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
State	Select to enable or disable the BPDU attack protection feature's state on the port(s) specified.
Mode	Select the BPDU attack protection feature's mode that will be applied to the port(s) specified. Options to choose from are:

The fields that can be configured are described below:

Parameter	Description
	<ul> <li>Drop - Drop all received BPDU packets when the port enters under attack state.</li> <li>Block - Drop all packets (include BPDU and normal packets) when the port enters under attack state.</li> <li>Shutdown - Shut down the port when the port enters under attack state.</li> </ul>

# **MAC** Authentication

This window is used to view and configure the MAC authentication settings. MAC authentication is a feature designed to authenticate a user by MAC address when the user is trying to access the network via the Switch. The Switch itself can perform the authentication based on a local database or be a RADIUS client and perform the authentication process via the RADIUS protocol with a remote RADIUS server.

To view the following window, click **Security > MAC Authentication**, as shown below:

AC Authentication					
AC Authentication Global Setting	S

	eth1/0/6			Disabled	
	eth1/0/7			Disabled	
	eth1/0/8			Disabled	
	eth1/0/9			Disabled	

Figure 9-65 Port Security Global Settings Window

The fields that can be configured for MAC Authentication Global Settings are described below:

Parameter	Description
MAC Authentication State	Select to enable or disable the MAC authentication feature's global state.
MAC Authentication Trap State	Select to enable or disable the MAC authentication feature's trap state.

The fields that can be configured for **MAC Authentication User Name and Password Settings** are described below:

Parameter	Description
User Name	Enter the username used for MAC authentication here. This name can be up to 16 characters long. Tick the <b>Default</b> option to restore the username to the client's MAC address here.
Password	Enter the password used for MAC authentication here. Tick the <b>Encrypt</b> option save this password in the encrypted form. Tick the <b>Default</b> option to restore the password to the client's MAC address here.

Click the **Apply** button to accept the changes made.

The fields that can be configured for MAC Authentication Port Settings are described below:

Parameter	Description	
Unit	Select the switch unit that will be used for this configuration here.	
From Port / To Port         Select the appropriate port range used for the configuration		
State	Select to enable or disable MAC authentication for the port(s) specified here.	

Click the **Apply** button to accept the changes made.

# **Web-based Access Control**

Web-based Access Control (WAC) is a feature designed to authenticate a user when the user is trying to access the Internet via the Switch. The authentication process uses the HTTP or HTTPS protocol. The Switch enters the authenticating stage when users attempt to browse Web pages (e.g., http://www.dlink.com) through a Web browser. When the Switch detects HTTP or HTTPS packets and this port is unauthenticated, the Switch will launch a pop-up user name and password window to guery users. Users are not able to access the Internet until the authentication process is passed.

The Switch can be the authentication server itself and do the authentication based on a local database, or be a RADIUS client and perform the authentication process via the RADIUS protocol with a remote RADIUS server. The client user initiates the authentication process of WAC by attempting to gain Web access.

D-Link's implementation of WAC uses a virtual IP that is exclusively used by the WAC function and is not known by any other modules of the Switch. In fact, to avoid affecting a Switch's other features, WAC will only use a virtual IP address to communicate with hosts. Thus, all authentication requests must be sent to a virtual IP address but not to the IP address of the Switch's physical interface.

Virtual IP works like this, when a host PC communicates with the WAC Switch through a virtual IP, the virtual IP is transformed into the physical IPIF (IP interface) address of the Switch to make the communication possible. The host PC and other servers' IP configurations do not depend on the virtual IP of WAC. The virtual IP does not respond to any ICMP packets or ARP requests, which means it is not allowed to configure a virtual IP on the same subnet as the Switch's IPIF (IP interface) or the same subnet as the host PCs' subnet.

As all packets to a virtual IP from authenticated and authenticating hosts will be trapped to the Switch's CPU, if the virtual IP is the same as other servers or PCs, the hosts on the WAC-enabled ports cannot communicate with the server or PC, which really own the IP address. If the hosts need to access the server or PC, the virtual IP cannot be the same as the one of the server or PC. If a host PC uses a proxy to access the Web, to make the authentication work properly the user of the PC should add the virtual IP to the exception of the proxy configuration. Whether or not a virtual IP is specified, users can access the WAC pages through the Switch's system IP. When a virtual IP is not specified, the authenticating Web request will be redirected to the Switch's system IP.

The Switch's implementation of WAC features a user-defined port number that allows the configuration of the TCP port for either the HTTP or HTTPS protocols. This TCP port for HTTP or HTTPs is used to identify the HTTP or HTTPs packets that will be trapped to the CPU for

authentication processing, or to access the login page. If not specified, the default port number for HTTP is 80 and the default port number for HTTPS is 443. If no protocol is specified, the default protocol is HTTP.

The following diagram illustrates the basic six steps all parties go through in a successful Web Authentication process:

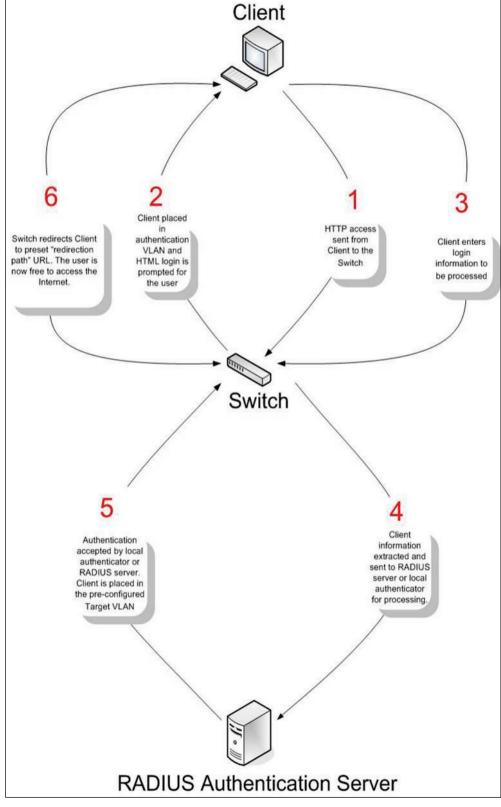

Figure 9-66 RADIUS Authentication Server

#### **Conditions and Limitations**

- If the client is utilizing DHCP to attain an IP address, the authenticating VLAN must provide a DHCP server or a DHCP relay functions so that client may obtain an IP address.
- Certain functions exist on the Switch that will filter HTTP packets, such as the Access Profile function. The user needs to be very careful when setting filter functions for the target VLAN, so that these HTTP packets are not denied by the Switch.
- If a RADIUS server is to be used for authentication, the user must first establish a RADIUS Server with the appropriate parameters, including the target VLAN, before enabling Web Authentication on the Switch.

#### Web Authentication

This window is used to view and configure the Web authentication settings.

To view the following window, click **Security > Web-based Access Control > Web Authentication**, as shown below:

Web Authentication				
Web Authentication				
Web Authebtication State	Enabled  Disabled			Apply
Trap State	Enabled  Disabled			
Virtual IPv4		Virtual IPv6	2013::1	
Virtual URL	128 chars	Redirection Path	128 chars	Apply

#### Figure 9-67 Port Security Global Settings Window

Parameter	Description
Web Authentication State	Select to enable or disable the Web authentication feature's global state.
Trap State	Select to enable or disable the Web authentication feature's trap state.
Virtual IPv4	Enter the virtual IPv4 address used here. The virtual IP of Web authentication is just the characterization of the Web authentication function on the Switch. All Web authentication processes communicate with this IP address, however, the virtual IP does not respond to any ICMP packet or ARP request. Therefore, it's not allowed to configure virtual IP in the same subnet as the Switch's IP interface or the same subnet as the host PCs' subnet, otherwise the Web authentication cannot operate correctly. The defined URL only takes effect when the virtual IP address is configured. The users get the FQDN URL stored on the DNS server to get the virtual IP address configured by the command. If the IPv4 virtual IP is not configured, the IPv4 access cannot start a Web authentication.
Virtual IPv6	Enter the virtual IPv6 address used here. If the IPv6 virtual IP is not configured, the IPv6 access cannot start a Web authentication.
Virtual URL	Enter the virtual URL used here. This URL can be up to 128 characters long.
Redirection Path	Enter the redirection path here. This path can be up to 128 characters long.

The fields that can be configured are described below:

## **WAC Port Settings**

This window is used to view and configure the WAC port settings.

To view the following window, click Security > Web-based Access Control > WAC Port Settings,
as shown below:

WAC Port Sett	ings		
WAC Port Settings	s

Port (1-65535)	● TCP ○ UDP			Add
Total Entries: 1				
Update Server	r IP TCP Po	ort UDP Port		
10.0.0/8	21	-	Delete	

Figure 9-70 JWAC Global Settings Window

The fields that can be configured for **JWAC Global Settings** are described below:

Parameter	Description
JWAC State	Select to enable or disable the JWAC feature's global state here.

Click the **Apply** button to accept the changes made.

The fields that can be configured for JWAC Settings are described below:

Parameter	Description
UDP Filtering	Select to enable or disable UDP filtering here.
Authentication Method	Select the authentication method used here. Options to choose from are <b>MD5</b> , <b>CHAP</b> , <b>PAP</b> , <b>MS-CHAP</b> , and <b>MS-CHAP-v2</b> .
Virtual IP	Select the virtual IP option used here. Options to choose from are <b>IPv4</b> , <b>IPv6</b> , and <b>URL</b> .
IPv4 Address	After selecting <b>IPv4</b> as the <b>Virtual IP</b> , the following field will be available. Enter the virtual IPv4 address used here. All JWAC authentication processes communicate with this IP address, however, the virtual IP does not respond to any ICMP packets or ARP requests. Therefore, it's not allowed to configure virtual IP in the same subnet as the switch's IP interface or the same subnet as the host PCs' subnet, otherwise JWAC authentication cannot operate correctly. The defined URL only takes effect when the virtual IP address is configured. The users get the FQDN URL stored on the DNS

Parameter	Description
	server to get the virtual IP address. The obtained IP address must match the virtual IP address configured by the command.
	If the IPv4 virtual IP is not configured, the IPv4 access cannot start JWAC authentication.
IPv6 Address	After selecting <b>IPv6</b> as the <b>Virtual IP</b> , the following field will be available. Enter the virtual IPv6 address used here. If the IPv6 virtual IP is not configured, the IPv6 access cannot start a JWAC authentication.
Virtual URL	After selecting <b>URL</b> as the <b>Virtual IP</b> , the following field will be available. Enter the virtual URL used here.
Forcible Logout	Select to enable or disable the forcible logout option here. When the forcible logout feature is enabled, a ping packet from an authenticated host to the JWAC switch with a TTL of 1 and a destination IP the same as virtual IP will be regarded as a logout request and the host will be moved back to unauthenticated state.
Redirect State	Select to enable or disable the redirection state here. When redirect is enabled, all Web access is redirected to the quarantine server or JWAC login page.
Redirect Destination	Select the redirect destination here. Options to choose from are <b>Quarantine Server</b> and <b>JWAC Login Page</b> . When redirecting to the quarantine server, the unauthenticated host will be redirected to the quarantine server when it tries to access a random URL. When redirecting to the JWAC login page, the unauthenticated host will be redirected to the JWAC login page in the switch to finish authentication. When redirecting to the quarantine server is specified, a quarantine server must be configured first before enabling the JWAC function globally. When redirect is disabled, all Web access is denied except for access to the quarantine server or JWAC login page.
Redirect Delay Time	Enter the redirect delay time value here. This value must be between 0 and 10 seconds. By default, this value 1 second.

The fields that can be configured for **Quarantine Server Settings** are described below:

Parameter	Description
Timeout	Enter the quarantine server's timeout value here. This value must be between 5 and 300 seconds. By default, this value is 30 seconds.
Monitor	Select to enable or disable the monitor option here. When the JWAC quarantine server monitor feature is enabled, the JWAC switch will monitor the quarantine server to ensure the server is okay. If the switch detects no quarantine server, it will redirect all unauthenticated HTTP accesses to the JWAC Login Page if the redirect option is enabled and the redirect destination is configured to be quarantine server.
URL	Select the whether the quarantine server uses an <b>IPv4</b> or <b>IPv6</b> address and enter the respective IP address in the space provided.

The fields that can be configured for Update Server Settings are described below:

Parameter	Description
IPv4 Network Prefix/Prefix Length	Enter the update server's IPv4 address and prefix length here. Any servers (like update.microsoft.com or some sites of Antivirus software companies, which ActiveX needs to access to accomplish the authentication before the client passes the authentication) should be added with its IP address or with the network address. By adding the network address, an entry can serve multiple update servers on the same network. Multiple update server addresses or network addresses can be configured.
IPv6 Network Prefix/Prefix Length	Enter the update server's IPv6 address and prefix length here.
Port	Enter the update server's port used here. This value must be between 1 and 65535. Also, select whether this port is a <b>TCP</b> or <b>UDP</b> port.

Click the **Apply** button to accept the changes made.

Click the **Add** button to add a new entry based on the information entered.

Click the **Delete** button to remove the specified entry.

### **JWAC Port Settings**

This window is used to view and configure the JWAC port settings.

To view the following window, click **Security > Japanese Web-based Access Control > JWAC Port Settings**, as shown below:

VAC Port	Settings				
Jnit	From Port	To Port	State	Max Authenticating User (1-100)

Figure 9-74 JWAC Customize Page (Japanese) Window

Click the Set to Default button to replace the information with the default information.

Click the **Apply** button to accept the changes made.

# **Network Access Authentication**

### **Guest VLAN**

This window is used to view and configure the network access authentication guest VLAN settings.

To view the following window, click **Security > Network Access Authentication > Guest VLAN**, as shown below:

Guest VLAN				
Guest VLAN				
Unit	From Port	To Port	VID (1-4094)	
1	eth1/0/1	eth1/0/1		Apply
Total Entries: 1				
	Port		VID	
	eth1/0/10		1	Delete
				1/1 (< < 1 > >) Go

Figure 9-75 Guest VLAN Window

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
VID	Enter the VLAN ID used here. This value must be between 1 and 4094.

The fields that can be configured are described below:

Click the **Delete** button to remove the specified entry.

## **Network Access Authentication Global Settings**

This window is used to view and configure the network access authentication global settings.

To view the following window, click **Security > Network Access Authentication > Network Access Authentication Global Settings**, as shown below:

Network Access Authentication	Global Settings			
Network Access Authentication MAC Form	nat Settings			
Case	Uppercase 🗸			
Delimiter	Dot 🗸			
Delimiter Number	2			Apply
General Settings				
Max Users (1-1000)	1000			
Deny MAC-Move	Disabled 🗸			
Authorization State	Enabled 🗸			Apply
User Information				
User Name	32 chars	VID (1-4094)		
Password Type	Plain Text	Password	32 chars	Apply
Total Entries: 1				
User Name	Password	Password Type	VID	
User	*****	Plaintext	1	Delete

Figure 9-76 Network Access Authentication Global Settings Window

The fields that can be configured for **Network Access Authentication MAC Format Settings** are described below:

Parameter	Description
Case	Select the case format that will be used for the network access authentication MAC address here. Options to choose from are <b>Lowercase</b> and <b>Uppercase</b> .
Delimiter	Select the delimiter that will be used for the network access authentication MAC address here. Options to choose from are <b>Hyphen</b> , <b>Colon</b> , <b>Dot</b> , and <b>None</b> .
Delimiter Number	Select the delimiter number option here. Options to choose from are <b>1</b> , <b>2</b> , and <b>5</b> .

Click the **Apply** button to accept the changes made.

The fields that can be configured for **General Settings** are described below:

Parameter	Description
Max Users	Enter the maximum amount of users allowed here. This value must be between 1 and 1000. By default, this option is 1000.
Deny MAC-Move	Select to enable or disable the deny MAC-move feature here. This option controls whether to allow authenticated hosts to do roaming across different switch ports and only controls whether a host, which is authenticated at a port set to the multi-authenticate mode is allowed to move to another port.

Parameter	Description
	If a station is allowed to move, there are two situations. It may need to be re-authenticated or directly moved to the new port without re- authentication based on the following rule. If the new port has the same authentication configuration as the original port, then re- authentication is not needed. The host will inherit the same authorization attributes with new port. The authenticated host can do roaming from port 1 to port 2, and inherit the authorization attributes without re-authentication. If the new port has the different authentication configuration as the original port, then re- authentication configuration as the original port, then re- authentication is needed. The authenticated host on port 1 can move and re-authenticated by port 2. If the new port has no authentication method enabled, then the station is directly moved to the new port. The session with the original port is removed. The authenticated host on port 1 can be moved to port 2. If this feature is disabled and an authenticated host moves to another port, then this is treated as a violation error.
Authorization State	Select to enable or disable the authorized state here. The option is used to enable or disable the acceptance of an authorized configuration. When authorization is enabled for authentication, the authorized attributes (for example VLAN, 802.1p default priority, bandwidth, and ACL) assigned by the RADIUS server will be accepted if the authorization status is enabled. Bandwidth and ACL are assigned on a per-port basis. If in the multi-authenticated mode, VLAN and 802.1p are assigned on a per-host basis. Otherwise, Bandwidth and ACL are assigned on a per-port basis.

I he fields that can be	configured for User Informatio	n are described below:

Parameter	Description
User Name	Enter the user name used here. This name can be up to 32 characters long.
VID	Enter the VLAN ID used here.
Password Type	Select the password type option here. Options to choose from are <b>Plain Text</b> and <b>Encrypted</b> .
Password	Enter the password used here.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

## **Network Access Authentication Port Settings**

This window is used to view and configure the network access authentication port settings.

The fields that can be configured are described below:

Parameter	Description	
Unit	Select the switch unit that will be used for this configuration here.	
From Port / To Port	Select the appropriate port range used for the configuration here.	
Host Mode	Select the host mode option that will be associated with the selected port(s) here. Options to choose from are <b>Multi Host</b> and <b>Multi Auth</b> . If the port is operated in the multi-host mode, and if one of the hosts is authenticated, then all other hosts are allowed to access the port. According to 802.1X authentication, if the re-authentication fails or the authenticated user logs off, the port will be blocked for a quiet period. The port restores the processing of EAPOL packets after the quiet period. If the port is operated in the multi-authenticated mode, then each host needs to be authenticated individually to access the port. A host is represented by its MAC address. Only the authorized host is allowed to access.	
VID List	After selecting the <b>Multi Auth</b> option as the <b>Host Mode</b> , the following parameter is available. Enter the VLAN ID used here. This is useful when different VLANs on the Switch have different authentication requirements. After the client is authenticated, the client will not be re-authenticated when received from other VLANs. This option is useful for trunk ports to do per-VLAN authentication control. When a port's authentication mode is changed to multi- host, the previous authentication VLAN(s) on this port will be cleared.	
CompAuth Mode	Select the compound authentication mode option here. Options to choose from are:	

Parameter	Description		
	<ul> <li>Any - Specifies that if any of the authentication method (802.1X, MAC-based Access Control, WAC, or JWAC) to passes, then passes.</li> <li>MAC-JWAC - Specifies to verify MAC-based authentication first. If the client passes, JWAC will be verified next. Both authentication methods need to be passed.</li> <li>MAC-WAC - Specifies to verify MAC-based authentication first. If the client passes, WAC will be verified next. Both authentication methods need to be passed.</li> </ul>		
Max Users	Enter the maximum users value used here. This value must be between 1 and 1000.		
Periodic	Select to enable or disable periodic re-authentication for the selected port here. This parameter only affects the 802.1X protocol.		
ReAuth Timer	Enter the re-authentication timer value here. This value must be between 1 and 65535 seconds. By default, this value is 3600 seconds.		
Inactivity State	Select to enable or disable the inactivity state here.		
Inactivity Timer	When the <b>Inactivity State</b> is enabled, enter the inactivity timer value here. This value must be between 120 and 65535 seconds. This parameter only affects the WAC and JWAC authentication protocols.		
Restart	Enter the restart time value used here. This value must be between 1 and 65535 seconds.		

## **Network Access Authentication Sessions Information**

This window is used to view and clear the network access authentication session information.

To view the following window, click **Security > Network Access Authentication > Network Access Authentication Sessions Information**, as shown below:

Network Access Authentication Sessions Information			
Network Access Authentication Sessions Information			
Port	1 ▼ eth1/0/1 ▼	Clear by Port Find	
MAC Address	00-84-57-00-00-00	Clear by MAC Find

Total Authenticated Hosts	0		
Total Blocked Hosts	0		
Authentication Sessions Information			
Total Entries: 0			

Figure 9-78 Network Access Authentication Sessions Information Window

The fields that can be configured are described below:

Parameter	Description
Port	Select the appropriate switch unit and port used for the query here.
MAC Address	Enter the MAC address used here.

Parameter	Description
Protocol	Select the protocol option used here. Options to choose from are <b>MAC</b> , <b>WAC</b> , <b>JWAC</b> , and <b>DOT1X</b> .

Click the Clear by Port button to the clear the information based on the port selected.

Click the **Clear by MAC** button to the clear the information based on the MAC address entered.

Click the Clear by Protocol button to the clear the information based on the protocol selected.

Click the **Clear All** button to clear all the information in this table.

Click the Find button to locate a specific entry based on the information entered.

Click the View All button to locate and display all the entries.

## **Safeguard Engine**

Periodically, malicious hosts on the network will attack the Switch by utilizing packet flooding (ARP Storm) or other methods. These attacks may increase the switch's CPU load beyond its capability. To alleviate this problem, the Safeguard Engine function was added to the Switch's software.

The Safeguard Engine can help the overall operability of the Switch by minimizing the workload of the Switch while the attack is ongoing, thus making it capable to forward essential packets over its network in a limited bandwidth.

If the CPU load rises above the rising threshold value, the Safeguard Engine function will be activated and the Switch will enter the exhausted mode. In the exhausted mode, the Switch will limit the bandwidth available for ARP and broadcast IP packets. If the CPU load falls below the falling threshold value, the Safeguard Engine will be deactivated and the Switch will exit the exhausted mode and enter the normal mode.

Packets that are destined to the CPU can be classified into three groups. These groups, otherwise known as sub-interfaces, are logical interfaces that the CPU will use to identify certain types of traffic. The three groups are **Protocol**, **Manage**, and **Route**. Generally, the **Protocol** group should receive the highest priority when the Switch's CPU processes received packets and the **Route** group should receive the lowest priority as the Switch's CPU usually does get involved in the processing of routing packets. In the **Protocol** group, packets are protocol control packets identified by the router. In the **Manage** group, packets are destined to any router or system network management interface by means of interactive access protocols, like Telnet and SSH. In the **Route** group, packets are identified as traversing routing packets that is generally processed by the router CPU.

Protocol Name	Sub-interface (Group)	Description
802.1X	Protocol	Port-based Network Access Control
ARP	Protocol	Address resolution Protocol (ARP)
DHCP	Protocol	Dynamic Host Configuration Protocol
DNS	Protocol	Domain Name System
GVRP	Protocol	GARP VLAN Registration Protocol
ICMPv4	Protocol	Internet Control Message Protocol
ICMPv6-Neighbor	Protocol	IPv6 Internet Control Message Protocol Neighbor Discovery Protocol (NS/NA/RS/RA)
ICMPv6-Other	Protocol	IPv6 Internet Control Message Protocol except Neighbor Discovery Protocol (NS/NA/RS/RA)
IGMP	Protocol	Internet Group Management Protocol
LACP	Protocol	Link Aggregation Control Protocol

In the following table a list of supported protocols are displayed with their respective sub-interfaces (groups):

Protocol Name	Sub-interface (Group)	roup) Description	
SNMP	Manage	Simple Network Management Protocol	
SSH	Manage	Secure Shell	
STP	Protocol	Spanning Tree Protocol	
Telnet	Manage Telnet		
TFTP	Manage Trivial File Transfer Protocol		
Web	Manage	Hypertext Transfer Protocol (HTTP) and Hypertext Transfer Protocol Secure (HTTPS)	

A customized rate limit (in packets per second) can be assigned to the Safeguard Engine's subinterfaces as a whole or to individual protocols specified by the user in the management interface. Be careful when customizing the rate limit for individual protocols, using this function, as improper rate limits can cause the Switch to process packets abnormally.

**NOTE:** When Safeguard Engine is enabled, the Switch will allot bandwidth to various traffic flows (ARP, IP) using the FFP (Fast Filter Processor) metering table to control the CPU utilization and limit traffic. This may limit the speed of routing traffic over the network.

### **Safeguard Engine Settings**

This window is used to view and configure the safeguard engine settings.

To view the following window, click **Security > Safeguard Engine > Safeguard Engine Settings**, as shown below:

Safeguard Engine Settings	
Safeguard Engine Settings	
Safeguard Engine State	Disabled
Trap State	Disabled V
Safeguard Engine Current Status	Normal
CPU Utilization Settings	
Rising Threshold (20% ~ 100%)	70 %
Falling Threshold (20% ~ 100%)	20 % Apply

The fields that can be configured for Safeguard Engine Settings are described below:

Parameter	Description
Safeguard Engine State	Select to enable or disable the safeguard engine feature here.
Trap State	Select to enable or disable the safeguard engine trap state here.

The fields that can be configured for CPU Utilization Settings are described below:

Parameter	Description
Rising Threshold	Enter the rising threshold value here. This value must be between 20% and 100%. This value is used to configure the acceptable level of CPU utilization before the Safeguard Engine mechanism is enabled. Once the CPU utilization reaches this percentage level,

Parameter	Description	
	the Switch will move into Exhausted mode, based on the parameters provided in this window.	
Falling Threshold	Enter the falling threshold value here. This value must be between 20% and 100%. This value is used to configure the acceptable level of CPU utilization as a percentage, where the Switch leaves the Safeguard Engine state and returns to normal mode.	

## **CPU Protect Counters**

This window is used to view and clear the CPU protection counter information.

To view the following window, click **Security > Safeguard Engine > CPU Protect Counters**, as shown below:

CPU Protect Counters		
Clear CPU Protect Counters		
<ul> <li>Sub Interface</li> <li>Protocol Name</li> </ul>	Manage  dhcp	Clear Clear All

Figure 9-80 CPU Protect Counters Window

The fields that can be configured are described below:

Parameter	Description
Sub Interface	Select the sub-interface option here. Options to choose from are <b>Manage</b> , <b>Protocol</b> , <b>Route</b> , and <b>All</b> . This option specifies to clear the CPU protect related counters of sub-interfaces.
Protocol Name	Select the protocol name option here. Options to choose from are DHCP, ARP, DNS, GVRP, ICMPv4, ICMPv6-Neighbor, ICMPv6-Other, IGMP, LACP, SNMP, SSH, STP, Telnet, TFTP, Web, 802.1X, and All.

Click the **Clear** button to clear the information based on the selections made.

Click the **Clear All** button to clear all the information in this table.

## **CPU Protect Sub-Interface**

This window is used to view and configure the CPU protection sub-interface settings.

To view the following window, click **Security > Safeguard Engine > CPU Protect Sub-Interface**, as shown below:

CPU Protect Sub-	Interface			
CPU Protect Sub-Inter	face			
Sub-Interface	Manage 💌	Rate Limit (0-1024)	pps 🦳 No Limit	Apply

Figure 9-82 CPU Protect Type Window

The fields that can be configured for CPU Protect Type are described below:

Parameter	Description
Protocol Name	Select the protocol name option here. Options to choose from are DHCP, ARP, DNS, GVRP, ICMPv4, ICMPv6-Neighbor, ICMPv6-Other, IGMP, LACP, SNMP, SSH, STP, Telnet, TFTP, Web, and 802.1X.
Rate Limit	Enter the rate limit value used here. This value must be between 0 and 1024 packets per second. Tick the <b>No Limit</b> option to disable the rate limit.

Click the **Apply** button to accept the changes made.

The fields that can be configured for Protect Type Information are described below:

Parameter	Description		
Protocol Name	Select the protocol name option here. Options to choose from are DHCP, ARP, DNS, GVRP, ICMPv4, ICMPv6-Neighbor, ICMPv6-		

Parameter	Description
	Other, IGMP, LACP, SNMP, SSH, STP, Telnet, TFTP, Web, and 802.1X.

Click the **Find** button to locate a specific entry based on the information entered.

# **Trusted Host**

This window is used to view and configure the trusted host settings.

To view the following window, click **Security > Trusted Host**, as shown below:

Trusted Host	_	_		
Trusted Host				
ACL Name	32 chars	Туре	Telnet	Арріу
Note: The first charact	er of ACL name must be a	letter.		
Total Entries: 1				
Туре	e		ACL Name	
Teine	et		Standard-IP-ACL	Delete

Figure 9-83 Trusted Host Window

Parameter	Description			
ACL Name	Enter the ACL name used here. This name can be up to 32 characters long.			
Туре	Select the trusted host type here. Options to choose from are <b>Telnet</b> , <b>SSH</b> , <b>Ping</b> , <b>HTTP</b> , and <b>HTTPS</b> .			

The fields that can be configured are described below:

Click the Apply button to accept the changes made.

Click the **Delete** button to remove the specific entry.

# **Traffic Segmentation Settings**

This window is used to view and configure the traffic segmentation settings. When the traffic segmentation forwarding domain is specified, packets received by the port will be restricted in Layer 2 packet forwarding to interfaces within the domain. When the forwarding domain of a port is empty, Layer 2 forwarding for packets received by the port is not restricted.

The traffic segmentation member list can be comprised of different interface types, for example port and port-channel in the same forwarding domain. If the interfaces specified by the command include a port-channel, all the member ports of this port-channel will be included in the forwarding domain.

If the forwarding domain of an interface is empty, then there is no restriction on Layer 2 forwarding of packets received by the port.

To view the following window, click **Security > Traffic Segmentation Settings**, as shown below:

Traffic 3	Segmentation Settings		_	_	_	
Traffic Se	egmentation Settings					
Unit	From Port eth1/0/1	To Port eth1/0/1	Forward Unit	From Forward Port eth1/0/1	To Forward Port eth1/0/1	Add Delete
Unit 1 S	ettings

Figure 9-85 Storm Control Settings Window

The fields that can be configured for Storm Control Trap Settings are described below:

Parameter	Description
Trap State	Select the storm control trap option here. Options to choose from are:
	<ul> <li>None - No traps are sent.</li> <li>Storm Occur - A trap notification is sent when a storm event is detected.</li> <li>Storm Clear - A trap notification is sent when a storm event is cleared.</li> <li>Both - A trap notification is sent when a storm event is detected or cleared.</li> </ul>

Click the **Apply** button to accept the changes made.

The fields that can be configured for Storm Control Polling Settings are described below:

Parameter	Description			
Interval	Enter the interval value used here. This value must be between 5 and 600 seconds. By default, this value is 5 seconds.			
Retries	Enter the retries value used here. This value must be between 0 and 360. By default, this value is 3. Tick the <b>Infinite</b> option to disable this feature.			

Parameter	Description			
Unit	Select the switch unit that will be used for this configuration here.			
From Port / To Port	Select the appropriate port range used for the configuration here.			
Туре	Select the type of storm attack that will be controlled here. Options to choose from are <b>Broadcast</b> , <b>Multicast</b> , and <b>Unicast</b> . When the action is configured as the shutdown mode, the unicast refers to both known and unknown unicast packets; that is, if the known and unknown unicast packets hit the specified threshold, the port will be shutdown. Otherwise, unicast refers to unknown unicast packets.			
Action	<ul> <li>Select the action that will be taken here. Options to choose from are:</li> <li>None - Specifies not to filter the storm packets.</li> <li>Shutdown - Specifies to shut down the port when the value specified for rise threshold is reached.</li> <li>Drop - Specifies to discard packets that exceed the risen</li> </ul>			
	threshold.			
Level Type	Select the level type option here. Options to choose from are <b>PPS</b> , <b>Kbps</b> , and <b>Level</b> .			
PPS Rise	Enter the rise packets per second value here. This option specifies the rise threshold value in packets count per second. This value must be between 0 and 2147483647 packets per second. If the low PPS value is not specified, the default value is 80% of the specified risen PPS.			
PPS Low	Enter the low packets per second value here. This option specifies the low threshold value in packets count per second. This value must be between 0 and 2147483647 packets per second. If the low PPS value is not specified, the default value is 80% of the specified risen PPS.			

The fields that can be configured for **Storm Control Port Settings** are described below:

Click the **Apply** button to accept the changes made.

After selecting the Kbps option as the Level Type, the following parameters are available.

Storm Control Port	Settings						
Unit	From Port	To Port	Туре	Action	Level Type	KBPS Rise (0-2147483647)	KBPS Low (0-2147483647)
1 💌	eth1/0/1 💌	eth1/0/1 🔽	Broadcast 💌	None 🗸	Kbps 🔽	Kbps	Kbps
							Apply

Figure 9-86 Storm Control (Kbps) Window

The fields that can be configured are described below:

Parameter	Description
KBPS Rise	Enter the rise KBPS value used here. This option specifies the rise threshold value as a rate of kilobits per second at which traffic is received on the port. This value must be between 0 and 2147483647 Kbps.
KBPS Low	Enter the low KBPS value used here. This option specifies the low threshold value as a rate of kilobits per second at which traffic is received on the port. This value must be between 0 and 2147483647 Kbps. If the low KBPS is not specified, the default value is 80% of the specified risen KBPS.

After selecting the Level option as the Level Type, the following parameters are available.

Storm Control Port	Storm Control Port Settings						
Unit	From Port	To Port	Туре	Action	Level Type	Level Rise (0-100)	Level Low (0-100)
1 💌	eth1/0/1 🔽	eth1/0/1 🔽	Broadcast 💌	None 💌	Level 🗸	%	%
							Apply

Figure 9-87 Storm Control (Level) Window

The fields that can be configured are described below:

Parameter	Description
Level Rise	Enter the rise level value used here. This option specifies the rise threshold value as a percentage of the total bandwidth per port at which traffic is received on the port. This value must be between 0% and 100%.
Level Low	Enter the low-level value used here. This option specifies the low threshold value as a percentage of the total bandwidth per port at which traffic is received on the port. This value must be between 0% and 100%. If the low level is not specified, the default value is 80% of the specified risen level.

Click the **Apply** button to accept the changes made.

# **DoS Attack Prevention Settings**

This window is used to view and configure the Denial-of-Service (DoS) attack prevention settings. The following well-known DoS types, which can be detected by most switches:

- Land Attack: This type of attack involves IP packets where the source and destination address are set to the address of the target device. It may cause the target device to reply to itself continuously.
- **Blat Attack**: This type of attack will send packets with the TCP/UDP source port equal to the destination port of the target device. It may cause the target device to respond to itself.
- **TCP-Null:** This type of attack involves port scanning by using specific packets, which contain a sequence number of 0 and no flags.
- **TCP-Xmas:** This type of attack involves port scanning by using specific packets, which contain a sequence number of 0 and the Urgent (URG), Push (PSH), and FIN flags.
- **TCP SYN-FIN:** This type of attack involves port scanning by using specific packets, which contain SYN and FIN flags.
- TCP SYN SrcPort Less 1024: This type of attack involves port scanning by using specific packets, which contain source port 0 to 1023, and SYN flag.
- **Ping of Death Attack:** A ping of death is a type of attack on a computer that involves sending a malformed or otherwise a malicious ping to a computer. A ping is normally 64 bytes in size (many computers cannot handle a ping larger than the maximum IP packet size) which is 65535 bytes. The sending of a ping of this size can crash the target computer. Traditionally, this bug has been relatively easy to exploit. Generally, sending a 65536 byte ping packet is illegal according to networking protocol, but a packet of such a size can be sent if it is fragmented; when the target computer reassembles the packet, a buffer overflow can occur, which often causes a system crash.
- **TCP Tiny Fragment Attack:** The Tiny TCP Fragment attacker uses IP fragmentation to create extremely small fragments and force the TCP header information into a separate packet fragment to pass through the check function of the router and issue an attack.
- All Types: All of above types.

#### To view the following window, click Security > DoS Attack Prevention Settings, as shown below:

#### Figure 9-88 DoS Attack Prevention Settings Window

The fields that can be configured for SNMP Server Enable Traps DoS Settings are described below:

Parameter	Description		
Trap State	Select to enable or disable the DoS attack prevention trap state here.		

Click the **Apply** button to accept the changes made.

The fields that can be configured for DoS Attack Prevention Settings are described below:

Parameter	Description
DoS Type Selection	Tick the DoS type option that will be prevented here.
State	Select to enable or disable the DoS attack prevention feature's global state here.
Action	Select the action that will be taken when the DoS attack was detected here. The only option to select here is <b>Drop</b> .

Click the **Apply** button to accept the changes made.

## SSH

Secure Shell (SSH) is a program allowing secure remote login and secure network services over an insecure network. It allows a secure login to remote host computers, a safe method of executing commands on a remote end node, and will provide secure encrypted and authenticated communication between two non-trusted hosts. SSH, with its array of unmatched security features is an essential tool in today's networking environment. It is a powerful guardian against numerous existing security hazards that now threaten network communications.

The steps required to use the SSH protocol for secure communication between a remote PC (the SSH client) and the Switch (the SSH server) are as follows:

Create a user account with admin-level access using the User Accounts window. This is
identical to creating any other admin-level User Account on the Switch, including specifying a
password. This password is used to logon to the Switch, once a secure communication path
has been established using the SSH protocol.

- Configure the User Account to use a specified authorization method to identify users that are allowed to establish SSH connections with the Switch using the SSH User Authentication Mode window. There are three choices as to the method SSH will use to authorize the user, which are Host Based, Password, and Public Key.
- Configure the encryption algorithm that SSH will use to encrypt and decrypt messages sent between the SSH client and the SSH server, using the SSH Authentication Method and Algorithm Settings window.
- Finally, enable SSH on the Switch using the SSH Configuration window.

After completing the preceding steps, a SSH Client on a remote PC can be configured to manage the Switch using a secure, in band connection.

# **SSH Global Settings**

This window is used to view and configure the SSH global settings.

To view the following window, click **Security > SSH > SSH Global Settings**, as shown below:

SSH Global Settings		
SSH Global Settings		
IP SSH Server State	Disabled	
IP SSH Service Port (1-65535)	22	
SSH Server Mode	V2	
Authentication Timeout (30-600)	120 sec	
Authentication Retries (1-32)	3 times	Apply

Figure 9-89 SSH Global Settings Window

Parameter	Description
IP SSH Server State	Select to enable or disable the SSH server's global state.
IP SSH Service Port	Enter the SSH service port number used here. This value must be between 1 and 65535. By default, this number is 22.
Authentication Timeout	Enter the authentication timeout value here. This value must be between 30 and 600 seconds. By default, this value is 120 seconds.
Authentication Retries	Enter the authentication retries value here. This value must be between 1 and 32. By default, this value is 3.

The fields that can be configured are described below:

Click the **Apply** button to accept the changes made.

### Host Key

This window is used to view and generate the SSH host key.

To view the following window, click **Security > SSH > Host Key**, as shown below:

Host Key		
Host Key Management		
Crypto Key Type	RSA	
Key Modulus	768 💌 bit	Generate Delete
Host Key		
Crypto Key Type	RSA	
Key pair was generated at	02:45:17, 2000-01-01	
Key Size	768	
Key Data	AAAAB3NzaC1yc2EAAAADAQABAAAAYQDa5HxonYoT	

Figure 9-90 Host Key Window

The fields that can be configured for Host Key Management are described below:

Parameter	Description
Crypto Key Type	Select the crypto key type used here. Options to choose from are the Rivest Shamir Adleman ( <b>RSA</b> ) key type and the Digital Signature Algorithm ( <b>DSA</b> ) key type.
Key Modulus	Select the key modulus value here. Options to choose from are <b>360</b> , <b>512</b> , <b>768</b> , <b>1024</b> , and <b>2048</b> bit.

Click the **Generate** button to generate a host key based on the selections made.

Click the **Delete** button to remove a host key based on the selections made.

The fields that can be configured for Host Key are described below:

Parameter	Description
Crypto Key Type	Select the crypto key type used here. Options to choose from are the Rivest Shamir Adleman ( <b>RSA</b> ) key type and the Digital Signature Algorithm ( <b>DSA</b> ) key type.

### **SSH Server Connection**

This window is used to view the SSH server connections table.

To view the following window, click **Security > SSH > SSH Server Connection**, as shown below:

	SSH Server Connection				
Г	SSH Table				
	Total Entries: 1				
	SID	Version	Cipher	User ID	Client IP Address
	0	V2	aes256-cbc/hmac-sha1	admin	14.70.168.192

Figure 9-91 SSH Server Connection Window

#### **SSH User Settings**

This window is used to view and configure the SSH user settings.

To view the following window, click **Security > SSH > SSH User Settings**, as shown below:

SH User Settings				
User Name Key File IPv4 Address	32 chars 779 chars	Authentication Method Host Name IPv6 Address	Password 255 chars 2013::1	Apply
Fotal Entries: 1				
User Name	Authentication Method	Key File	Host Name	Host IP
admin	Password			

The fields that can be configured are described below:

Parameter	Description	
User Name	Enter the SSH user's username used here. This name can be up to 32 characters long.	
Authentication Method	Select the authentication methods used here. Options to choose from are <b>Password</b> , <b>Public Key</b> , and <b>Host-based</b> .	
Key File	After selecting the <b>Public Key</b> or <b>Host-based</b> option as the <b>Authentication Method</b> , enter the public key here.	
Host Name	After selecting the <b>Host-based</b> option as the <b>Authentication</b> <b>Method</b> , enter the host name here.	
IPv4 Address	After selecting the <b>Host-based</b> option as the <b>Authentication</b> <b>Method</b> , select and enter the IPv4 address here.	
IPv6 Address	After selecting the <b>Host-based</b> option as the <b>Authentication</b> <b>Method</b> , select and enter the IPv6 address here.	

Click the **Apply** button to accept the changes made.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## SSL

Secure Sockets Layer (SSL) is a security feature that will provide a secure communication path between a server and client through the use of authentication, digital signatures, and encryption. These security functions are implemented through the use of a cipher suite, which is a security string that determines the exact cryptographic parameters, specific encryption algorithms, and key sizes to be used for an authentication session and consists of three levels:

- Key Exchange: The first part of the cipher suite string specifies the public key algorithm to be used. This Switch utilizes the Rivest Shamir Adleman (RSA) public key algorithm and the Digital Signature Algorithm (DSA), specified here as the DHE DSS Diffie-Hellman (DHE) public key algorithm. This is the first authentication process between client and server as they "exchange keys" in looking for a match and therefore authentication to be accepted to negotiate encryptions on the following level.
- Encryption: The second part of the cipher suite that includes the encryption used for encrypting the messages sent between client and host. The Switch supports two types of cryptology algorithms:

- Stream Ciphers There are two types of stream ciphers on the Switch, RC4 with 40-bit keys, and RC4 with 128-bit keys. These keys are used to encrypt messages and need to be consistent between client and host for optimal use.
- CBC Block Ciphers CBC refers to Cipher Block Chaining, which means that a portion of the previously encrypted block of encrypted text is used in the encryption of the current block. The Switch supports the 3DES EDE encryption code defined by the Data Encryption Standard (DES) and the Advanced Encryption Standard (AES) to create the encrypted text.
- Hash Algorithm: This part of the cipher suite allows the user to choose a message digest function, which will determine a Message Authentication Code. This Message Authentication Code will be encrypted with a sent message to provide integrity and prevent against replay attacks. The Switch supports three hash algorithms, MD5 (Message Digest 5), SHA (Secure Hash Algorithm), and SHA256.

These three parameters are uniquely assembled in four choices on the Switch to create a threelayered encryption code for secure communication between the server and the client. The user may implement any one or combination of the cipher suites available, yet different cipher suites will affect the security level and the performance of the secured connection. The information included in the cipher suites is not included with the Switch and requires downloading from a third source in a file form called a certificate. This function of the Switch cannot be executed without the presence and implementation of the certificate file and can be downloaded to the Switch by utilizing a TFTP server or the Switch file system. The Switch supports TLS 1.0, TLS 1.1, and TLS 1.2. Other versions of SSL may not be compatible with this Switch and may cause problems upon authentication and transfer of messages from client to server.

When the SSL function has been enabled, the web will become disabled. To manage the Switch through the web-based management while utilizing the SSL function, the web browser must support SSL encryption and the header of the URL must begin with https:// (Ex. https://xx.xx.xx). Any other method will result in an error and no access can be authorized for the web-based management.

Users can download a certificate file for the SSL function on the Switch from a TFTP server. The certificate file is a data record used for authenticating devices on the network. It contains information on the owner, keys for authentication and digital signatures. Both the server and the client must have consistent certificate files for optimal use of the SSL function. Currently, the Switch comes with a certificate pre-loaded though the user may need to download more, depending on user circumstances.

## **SSL Global Settings**

This window is used to view and configure the SSL feature's global settings.

SSL Global Settings		
SSL Global Settings		
SSL Status	○ Enabled	
Service Policy	32 chars	Apply
Import File		
File Select	Certificate O Private Key	
	Browse (The file name range is 1-32 chars.)	
Destination File Name	32 chars	Apply
Note: You can access the File Syst	tem page to manage these imported files.	
SSL Self-signed Certificate		
Self-signed Certificate		Generate

To view the following window, click Security > SSL > SSL Global Settings, as shown below:

The fields that can be configured for SSL Global Settings are described below:

Parameter	Description
SSL Status	Select to enable or disable the SSL feature's global status here.

Parameter	Description
Service Policy	Enter the service policy name here. This name can be up to 32 characters long.

Click the **Apply** button to accept the changes made.

The fields that can be configured for Import File are described below:

Parameter	Description
File Select	Select the file type that will be loaded here. Options to choose from are <b>Certificate</b> and <b>Private Key</b> . After selecting the file type, browse to the appropriate file, located on the local computer, by pressing the <b>Browse</b> button.
Destination File Name	Enter the destination file name used here. This name can be up to 32 characters long.

Click the **Apply** button to accept the changes made.

Click the **Generate** button in the **SSL-Self-signed Certificate** section to generate a new self-signed certificate, regardless if there is a built-in self-signed certificate or not. The certificate generated does not affect the user-downloaded certificates.

**NOTE:** The SSL self-signed certificate only supports self-signature RSA certificates with a key length of 2048 bits.

## **Crypto PKI Trustpoint**

This window is used to view and configure the crypto PKI trust point settings.

To view the following window, click Security > SSL > Crypto PKI Trustpoint, as shown below:

ypto PKI Trustpoint				
Trustpoint	32 chars			Apply Find
Trustpoint	32 chars			
File System Path	e.g.:c:/cacert	Password	64 chars	]
TFTP Server Path	e.g.:ip/name	Туре	Local	Apply
otal Entries: 1				
Primary Trustpoi	nt Name	CA	Local Certificate	Local Private Key
Trust	Point			Delete

Figure 9-94 Crypto PKI Trustpoint Window

The fields that can be configured are described below:	
--	--

Parameter	Description		
Trustpoint	Enter the name of the trust-point that is associated with the imported certificates and key pairs here. This name can be up to 32 characters long.		
File System Path         Enter the file system path for certificates and key pairs her			
Password	Enter the encrypted password phrase that is used to undo encryption when the private keys are imported here. The password		

Parameter	Description			
	phrase is a string of up to 64 characters. If the password phrase is not specified, the NULL string will be used.			
TFTP Server Path	Enter the TFTP server's path here.			
Туре	Select the type of certificate that will be imported here. Options to choose from are:			
	<ul> <li>Both - Specifies to import the CA certificate, local certificate, and key pairs.</li> <li>CA - Specifies to import the CA certificate only.</li> <li>Local - Specifies to import local certificate and key pairs only.</li> </ul>			

Click the **Apply** button to accept the changes made.

Click the Find button to locate a specific entry based on the information entered.

Click the **Delete** button to remove the specified entry.

# **SSL Service Policy**

This window is used to view and configure the SSL service policy settings.

To view the following window, click **Security > SSL > SSL Service Policy**, as shown below:

SSL Service Policy					
SSL Service Policy					
Policy Name		32 chars			Apply Find
Policy Name		32 chars			
Folicy Name					
Mandan		TLS 1.0			
Version		TLS 1.1

Figure 9-95 SSL Service Policy Window

Parameter	Description		
Policy Name	Enter the service policy name here. This name can be up to 32 characters long.		
Version	Select the TLS version that will be used here. Options to choose from are <b>TLS 1.0</b> , <b>TLS 1.1</b> , and <b>TLS1.2</b> .		
Session Cache Timeout	Enter the session cache timeout value used here. This value must be between 60 and 86400 seconds. By default, this value is 600 seconds.		

The fields that can be configured are described below:

Parameter	Description	
Secure Trustpoint	Enter the secure trust point's name here. This name can be up to 32 characters long.	
Cipher Suites	Select the cipher suites that will be associated with this profile here.	

Click the **Apply** button to accept the changes made.

Click the Find button to locate a specific entry based on the information entered.

Click the **Edit** button to re-configure the specific entry.

Click the **Delete** button to remove the specified entry.

# **Network Protocol Port Protection Settings**

This window is used to display and configure the network protocol port protection settings.

To view the following window, click **Security > Network Protocol Port Protection Settings**, as shown below:

Network Protocol Port Protection Settin	gs	
Network Protocol Port Protection Settings		
TCP Port Protection State	Enabled      Disabled	
UDP Port Protection State	Enabled      Disabled	Apply

#### Figure 9-96 Network Protocol Port Protect Settings Window

The fields that can be configured are described below:

Parameter	Description
TCP Port Protect State	Select to enable or disable the TCP port network protocol protection function here.
UDP Port Protect State	Select to enable or disable the UDP port network protocol protection function here.

Click the **Apply** button to accept the changes made.

# **10. OAM**

Cable Diagnostics DDM

# **Cable Diagnostics**

The cable diagnostics feature is designed primarily for administrators or customer service representatives to verify and test copper cables; it can rapidly determine the quality of the cables and the types of error.

To view the following window, click **OAM > Cable Diagnostics**, as shown below:

Cable Diagnostics					
Cable Diagnostics					
Unit	From Port eth1/0/1		To Port eth1/0/1		Test
Unit 1 Settings					Clear All
Port	Туре	Link Status	Test Result	Cable Length (M)	
			Pair 1 Open at 0M	-	
eth1/0/1	1000BASE-T	Link Down	Pair 2 Ok at 5M		Clear
Guillon	10000002-1	Link Down	Pair 3 Ok at 5M		Cical
			Pair 4 Open at 0M		
eth1/0/2	1000BASE-T	Link Down	-	-	Clear
eth1/0/3	1000BASE-T	Link Up	-	-	Clear
eth1/0/4	1000BASE-T	Link Down	-	-	Clear
eth1/0/5	1000BASE-T	Link Down	-	-	Clear
eth1/0/6	1000BASE-T	Link Down	-	-	Clear
eth1/0/7	1000BASE-T	Link Down	-	-	Clear
eth1/0/8	1000BASE-T	Link Down	-	-	Clear
eth1/0/9	1000BASE-T	Link Down	-	-	Clear
eth1/0/10	1000BASE-T	Link Down	-	-	Clear

Figure 10-1 Cable Diagnostics Window

The fields that can be configured are described below:

Parameter	Description		
Unit	Select the switch unit that will be used for this configuration here.		
From Port / To Port	Select the appropriate port range used for the configuration here.		

Click the Test button to test the specific port.

Click the Clear button to clear all the information for the specific port.

Click the Clear All button to clear all the information in this table.

### DDM

This folder contains windows that perform Digital Diagnostic Monitoring (DDM) functions on the Switch. There are windows that allow the user to view the digital diagnostic monitoring status of SFP modules inserting to the Switch and to configure alarm settings, warning settings, temperature

threshold settings, voltage threshold settings, bias current threshold settings, Tx power threshold settings, and Rx power threshold settings.

#### **DDM Settings**

The window is used to configure the action that will occur for specific ports when an exceeding alarm threshold or warning threshold event is encountered.

To view the following window, click **OAM > DDM > DDM Settings**, as shown below:

DDM Settings				
DDM Global Settings				
Transceiver Monitoring Traps Alarm	Disabled			
Transceiver Monitoring Traps Warning	Disabled     O Enabled			Apply
DDM Shutdown Settings				
Unit From Port	To Port	State	Shutdown	
1 • eth1/0/1 •	eth1/0/1	Disabled 💌	Alarm	Apply
Unit 1 Settings				
Port		State	Shutdown	
eth1/0/25		Disabled	None	
eth1/0/26		Disabled	None	

Figure 10-2 DDM Settings Window

Parameter	Description				
Transceiver Monitoring Traps Alarm	Select this option to enable or disable sending alarm level trap.				
Transceiver Monitoring Traps Warning	Select this option to enable or disable sending warning level trap.				
Unit	Select the switch unit that will be used for this configuration here.				
From Port / To Port	Select the appropriate port range used for the configuration here.				
State	Use the drop-down menu to enable or disable the DDM state.				
Shutdown	Specify whether to shut down the port, when the operating parameter exceeds the Alarm or Warning threshold.				
	<ul> <li>Alarm - Shutdown the port when the configured alarm threshold range is exceeded.</li> <li>Warning - Shutdown the port when the configured warning threshold range is exceeded.</li> <li>None - The port will never shutdown regardless if the threshold ranges are exceeded or not. This is the default.</li> </ul>				

The fields that can be configured are described below:

Click the **Apply** button to accept the changes made for each individual section.

#### **DDM Temperature Threshold Settings**

This window is used to configure the DDM Temperature Threshold Settings for specific ports on the Switch.

To view the following window, click **OAM > DDM > DDM Temperature Threshold Settings**, as shown below:

Jnit 1 💙	Port eth1/0/1		Type Low Alarm	Value (-128-127.9	Celsius	Apply
Init 1 Settings						
	Current	High Alarm (C	elsius) Hiah (	Warning (Celsius)	Low Warning (Celsius)	Low Alarm (Celsius)
Port eth1/0/25	Current 31.879	High Alarm (Co 78.000		Warning (Celsius) 73.000	Low Warning (Celsius) -8.000	Low Alarm (Celsius) -13.000

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
Port	Select the port used for the configuration here.
Action	Select the action that will be taken here. Options to choose from are <b>Add</b> and <b>Delete</b> .
Туре	Select the type of temperature threshold. Options to choose from are <b>Low Alarm</b> , <b>Low Warning</b> , <b>High Alarm</b> , and <b>High Warning</b> .
Value	Enter the threshold value. This value must be between -128 and 127.996 °C.

Click the **Apply** button to accept the changes made.

#### **DDM Voltage Threshold Settings**

This window is used to configure the DDM Voltage Threshold Settings for specific ports on the Switch.

To view the following window, click **OAM > DDM > DDM Voltage Threshold Settings**, as shown below:

Jnit 1 Jnit 1 Settings	Port eth1/0/1	Action Type Add V Low A	Value (0-6.55)	V	Apply
Port	Current	High Alarm (V)	High Warning (V)	Low Warning (V)	Low Alarm (V)
	Current 3.310	High Alarm (V) 3.700	High Warning (V) 3.600	Low Warning (V) 3.000	Low Alarm (V) 2.900

Figure 10-4 DDM Voltage Threshold Settings Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
Port	Select the port used for the configuration here.
Action	Select the action that will be taken here. Options to choose from are <b>Add</b> and <b>Delete</b> .
Туре	Select the type of voltage threshold. Options to choose from are Low Alarm, Low Warning, High Alarm, and High Warning.
Value	Enter the threshold value. This value must be between 0 and 6.55 Volt.

Click the **Apply** button to accept the changes made.

### **DDM Bias Current Threshold Settings**

This window is used to configure the threshold of the bias current for specific ports on the Switch.

To view the following window, click **OAM > DDM > DDM Bias Current Threshold Settings**, as shown below:

nit v nit 1 Settings	Port eth1/0/1	Action Type Add C Low Alarm	Value (0-131)	mA	Apply
Port	Current	High Alarm (mA)	High Warning (mA)	Low Warning (mA)	Low Alarm (mA)
Port eth1/0/25	Current 7.959	High Alarm (mA) 11.800	High Warning (mA) 10.800	Low Warning (mA) 5.000	Low Alarm (mA) 4.000

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
Port	Select the port used for the configuration here.
Action	Select the action that will be taken here. Options to choose from are <b>Add</b> and <b>Delete</b> .
Туре	Select the type of bias current threshold. Options to choose from are <b>Low Alarm</b> , <b>Low Warning</b> , <b>High Alarm</b> , and <b>High Warning</b> .
Value	Enter the threshold value. This value must be between 0 and 131 mA.

The fields that can be configured are described below:

Click the **Apply** button to accept the changes made.

### **DDM TX Power Threshold Settings**

This window is used to configure the threshold of TX power for specific ports on the Switch.

To view the following window, click **OAM > DDM > DDM TX Power Threshold Settings**, as shown below:

Jnit 1 V Jnit 1 Settings	Port eth1/0/1	Action	Type Low Alarm	Power Unit	Value (0-6.5535)	nW Apply
int i oottiingo						
Port	Current	High Alarn	n (mW)	High Warning (mW)	Low Warning (mW)	Low Alarm (mW)
	Current 0.572	High Alarn 0.83		High Warning (mW) 0.661	Low Warning (mW) 0.316	Low Alarm (mW) 0.251

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
Port	Select the port used for the configuration here.
Action	Select the action that will be taken here. Options to choose from are <b>Add</b> and <b>Delete</b> .
Туре	Select the type of TX power threshold. Options to choose from are Low Alarm, Low Warning, High Alarm, and High Warning.
Power Unit	Select the power unit here. Options to choose from are <b>mW</b> and <b>dBm</b> .
Value	Enter the threshold value. When selecting <b>mW</b> in the <b>Power Unit</b> drop-down list, this value must be between 0 and 6.5535. When selecting <b>dBm</b> in the <b>Power Unit</b> drop-down list, this value must be between -40 and 8.1647.

Click the **Apply** button to accept the changes made.

### **DDM RX Power Threshold Settings**

This window is used to configure the threshold of RX power for specific ports on the Switch.

To view the following window, click **OAM > DDM > DDM RX Power Threshold Settings**, as shown below:

Jnit 1 🗸		Action Type Add V Low Alarm	Power Unit	Value (0-6.5535)	W Apply
Port	Current	High Alarm (mW)	High Warning (mW)	Low Warning (mW)	Low Alarm (mW)
Port eth1/0/25	Current 0.375	High Alarm (mW) 1.000	High Warning (mW) 0.794	Low Warning (mW) 0.016	Low Alarm (mW) 0.010

#### Figure 10-7 DDM RX Power Threshold Settings Window

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
Port	Select the port used for the configuration here.
Action	Select the action that will be taken here. Options to choose from are <b>Add</b> and <b>Delete</b> .
Туре	Select the type of RX power threshold. Options to choose from are Low Alarm, Low Warning, High Alarm, and High Warning.
Power Unit	Select the power unit here. Options to choose from are <b>mW</b> and <b>dBm</b> .
Value	Enter the threshold value. When selecting <b>mW</b> in the <b>Power Unit</b> drop-down list, this value must be between 0 and 6.5535. When selecting <b>dBm</b> in the <b>Power Unit</b> drop-down list, this value must be between -40 and 8.1647.

The fields that can be configured are described below:

Click the **Apply** button to accept the changes made.

#### **DDM Status Table**

This window is used to display the current operating digital diagnostic monitoring parameters and their values on the SFP module for specified ports.

To view the following window, click **OAM > DDM > DDM Status Table**, as shown below:

Status Table –		W Status Lable						
otal Entries: 2								
Port	Temperature (Celsius)	Voltage (V)	Bias Current (mA)	TX Power (mW)	RX Power (mW)			
eth1/0/25	26.588	3.300	7.977	0.573	0.000			
eth1/0/26	23.096	3.303	7.323	0.617	0.000

# **Mirror Settings**

This window is used to view and configure the mirror feature's settings. The Switch allows users to copy frames transmitted and received on a port and redirect the copies to another port. Attach a

monitoring device to the mirroring port, such as a sniffer or an RMON probe, to view details about the packets passing through the first port. This is useful for network monitoring and troubleshooting purposes.

Mirror Settings

	1	Lo	cal Session		Show Detail

Figure 11-8 Mirror Settings Window

Parameter	Description
Session Number	Select the mirror session number for this entry here. This number is between 1 and 4.
Destination	Tick the checkbox, next to the <b>Destination</b> option, to configure the destination for this port mirror entry.
	In the first drop-down menu, select the <b>Port</b> option.
	In the second drop-down menu, select the destination switch's Unit ID.
	In the third drop-down menu, select the destination switch's port number.
Source	Tick the checkbox, next to the <b>Source</b> option, to configure the source for this port mirror entry.
	In the first drop-down menu, we can select the source type. Options to choose from are:
	<ul> <li>Port - In the first drop-down menu, select the source switch's Unit ID. From the From Port drop-down menu, select the starting port number and from the To Port drop-down menu, select the ending port number. Lastly select the Frame Type option from the fifth drop-down menu. Options to choose from as the Frame Type are Both, RX, TX, and TX Forwarding. When selecting Both, traffic in both the incoming and outgoing directions will be mirrored. When selecting RX, traffic in only the incoming direction will be mirrored. When selecting TX forwarding, traffic in the outgoing direction will be mirrored only when the port(s) is/are in the STG forwarding state.</li> <li>ACL - Enter the ACL profile name in the space provided.</li> </ul>

The fields that can be configured for **Mirror Settings** are described below:

Click the **Add** button to add the newly configured mirror entry based on the information entered.

Click the **Delete** button to delete an existing mirror entry based on the information entered.

The fields that can be configured for Mirror Session Table are described below:

Parameter	Description
Mirror Session Type	Select the mirror session type of information that will be displayed from the drop-down menu. Options to choose from are <b>All Session</b> , and <b>Session Number</b> .
	After selecting the <b>Session Number</b> option, select the session number from the second drop-down menu. This number is from 1 to 4.

Click the **Find** button to locate a specific entry based on the information entered.

Click the **Show Detail** button to see the detail information of the specific session.

After clicking the **Show Detail** button, the following window will appear.

## sFlow

sFlow (RFC3176) is a technology for monitoring traffic in data networks containing switches and routers. The sFlow monitoring system consists of an sFlow Agent (embedded in a switch or router or in a standalone probe) and a central sFlow Collector. The architecture and sampling techniques used in the sFlow monitoring system were designed for providing continuous site-wide (and enterprise-wide) traffic monitoring of high speed switched and routed networks.

### **sFlow Agent Information**

This window is used to view the sFlow agent information.

To view the following window, click **Monitoring > sFlow > sFlow Agent Information**, as shown below:

sFlow Agent Information		
sFlow Agent Information		
sFlow Agent Version	1.3;D-Link Corporation Inc.;1.00	
sFlow Agent Address	10.90.90.90	
sFlow Agent IPv6 Address	FE80::3E1E:4FF:FEA1:B9E0	

Figure 11-10 sFlow Agent Information Window

### **sFlow Receiver Settings**

This window is used to view and configure receivers for the sFlow agents. Receivers cannot be added to or removed from the sFlow agent.

To view the following window, click **Monitoring > sFlow > sFlow Receiver Settings**, as shown below:

sFlow Receiver Settings       Owner Name       32 chars         Receiver Index (1-4)       Owner Name       32 chars         Expire Time (1-2000000)       sec Infinite       Max Datagram Size (700-1400)       1400       bytes         Collector Address       1.1.1.1 or 2013::1       UDP Port (1-65535)       6343       Apply								
							L

					_			
Index 1		0	0	1400	0.0.0.0	6343	5	Reset

Figure 11-11 sFlow Receiver Settings Window

The fields that can be configured are described below:

Parameter	Description
Receiver Index	Enter the index number of the receiver here. This number must be between 1 and 4.
Owner Name	Enter the owner name of the receiver here. This name can be up to 32 characters long.
Expire Time	Enter the expiration time for the entry here. The parameters of the entry will reset when the timer expired. The range is from 1 to 2000000 seconds. Selecting <b>Infinite</b> specifies that the entry will not expire.
Max Datagram Size	Enter the maximum number of data bytes of a single sFlow datagram here. The range is from 700 to 1400 bytes. By default, this value is 1400 bytes.
Collector Address	Enter the remote sFlow collector's IPv4 or IPv6 address here.
UDP Port	Enter the remote sFlow collector's UDP port number here. This number must be between 1 and 65535. By default, this value is 6343.

Click the **Apply** button to accept the changes made.

Click the Reset button to reset the specified entry's settings to the default settings.

### **sFlow Sampler Settings**

This window is used to view and configure sFlow Sampler settings.

To view the following window, click **Monitoring > sFlow > sFlow Sampler Settings**, as shown below:

sFlow Sampl	er Settings	_	_	_	_		
sFlow Sampler S	Settings						
	om Port h1/0/1 🔽	To Port eth1/0/1	Instance (1-	65535) Receiver (1-4)	Mode	Sampling Rate (0-65536)	Max Header Size (18-256) 128 bytes Apply
Port	Instance	Receiver	Mode	Admin Rate	Active Rate	Max Header Size	
eth1/0/1	1	1	Inbound	100	100	128	Delete
						1/1 <	< 1 > >  Go

The fields that can be configured are described below:

Parameter	Description			
Unit	Select the switch unit that will be used for this configuration here.			
From Port / To Port	Select the appropriate port range used for the configuration here.			
Instance	Enter the instance's index number if multiple samplers are associated with one interface. The valid range is from 1 to 65535.			
Receiver	Enter the receiver's index for this sampler. If not specified, the value is 0. This value must be between 1 and 4.			
Mode	Select the mode here. Options to choose from are:			
	<ul> <li>Inbound - Specifies to sample ingress packets. This is the default direction of a sampler.</li> <li>Outbound - Specifies to sample egress packets.</li> </ul>			
Sampling Rate	Enter the packet-sampling rate here. This value must be between 0 and 65536. Entering 0 will disable this function. If not specified, the default value is 0.			
Max Header Size	Enter the maximum number of bytes that should be copied from sampled packets. This value must be between 18 and 256 bytes. By default, this value is 128 bytes.			

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

#### **sFlow Poller Settings**

This window is used to view and configure the sFlow Poller settings.

To view the following window, click **Monitoring > sFlow > sFlow Poller Settings**, as shown below:

sFlow Poller	r Settings	_			_	_	
sFlow Poller Se	ettings						
Unit	From Port	To Port	Instance (1-65535)	Receiver (1-4)	Interval (0-1	120)	
1 🗸	eth1/0/1 🔽	eth1/0/1 🔽				sec	Apply
Total Entries:	1						
	Port	Ins	tance	Receiver		Interval	
	eth1/0/1		1	1		120	Delete
						1/1 < <	1 > > Go

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
From Port / To Port	Select the appropriate port range used for the configuration here.
Instance	Enter the instance's index number if multiple samplers are associated with one interface. The valid range is from 1 to 65535.
Receiver	Enter the receiver's index value for this poller here. This value must be between 1 and 4.
Interval	Enter the maximum number of seconds between successive polling samples. This value must be between 0 and 120 seconds. Entering 0 will disable this feature. By default, this value is 0.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

## **Device Environment**

The device environment feature displays the Switch internal temperature status.

To view the following window	r, click <b>Monitoring &gt;</b>	Device Environment,	, as shown below:

Figure 12-1 Power Saving Window

The fields that can be configured are described below:

Parameter	Description	
Link Detection Power Saving	Select this option to enable or disable the link detection state. When enabled, a port, which has a link down status, will be turned off to save power to the Switch. This will not affect the port's capabilities when the port status is link up.	
Length Detection Power Saving	Select this option to enable or disable the cable length detection power saving feature. This feature will allow the Switch to automatically detect the cable length connected to the port and increase or reduce the required power to this port accordingly to save power.	
Scheduled Port-shutdown Power Saving	Select this option to enable or disable applying the power saving by scheduled port shutdown.	
Scheduled Hibernation Power Saving	Select to enable or disable the scheduled hibernation power saving function here.	

Parameter	Description	
Scheduled Dim-LED Power Saving	Select this option to enable or disable applying the power saving by scheduled dimming LEDs.	
Administrative Dim-LED	Select this option to enable or disable the port LED function.	
Туре	Select the type of power saving. Options to choose from are <b>Dim</b> - <b>LED</b> and <b>Hibernation</b> .	
Time Range	Enter the name of the time range to associate with the power saving type.	

Click the **Apply** button to accept the changes made for each individual section.

Click the **Delete** button to remove the specified entry.

**NOTE:** The **hibernation** feature can only be configured when physical stacking is disabled on this switch.

#### After clicking the **Power Saving Shutdown Settings** tab, the following page will appear.

Figure 13-4 Firmware Backup to HTTP Window

The fields that can be configured are described below:

Parameter	Description	
Unit	Select the switch unit that will be used for this configuration here.	
Source File	Enter the source filename and path of the firmware file located on the Switch here. This field can be up to 64 characters long.	

Click the **Backup** button to initiate the firmware backup. Wait for the Web browser to prompt where to save the file on the local PC.

#### Firmware Backup to TFTP

This window is used to initiate a firmware backup to a TFTP server.

To view the following window, click **Tools > Firmware Upgrade & Backup > Firmware Backup to TFTP**, as shown below:

Firmware Backup	Firmware Backup to TFTP		
Unit	1		
TFTP Server IP	• • IPv4		
	O IPv6		
Source File	64 chars		
Destination File	64 chars		
		Backup	

Figure 13-5 Firmware Backup to TFTP Window

Parameter	Description	
Unit	Select the switch unit that will be used for this configuration here.	
TFTP Server IP	Enter the TFTP server's IP address here. When the <b>IPv4</b> option is selected, enter the IPv4 address of the	
	TFTP server in the space provided.	
	When the <b>IPv6</b> option is selected, enter the IPv6 address of the TFTP server in the space provided.	
Source File	Enter the source filename and path of the firmware file located on the Switch here. This field can be up to 64 characters long.	
Destination File	Enter the destination filename and path where the firmware should be stored on the TFTP server. This field can be up to 64 characters long.	

The fields that can be configured are described below:

Click the **Backup** button to initiate the firmware backup.

## **Configuration Restore & Backup**

#### **Configuration Restore from HTTP**

This window is used to initiate a configuration restore from a local PC using HTTP.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Restore from HTTP**, as shown below:

Configuration Re	Configuration Restore from HTTP		
Unit	All		
Source File	Browse		
Destination File	64 chars running-config startup-config		
Replace			
	Restore		

Figure 13-6 Configuration Restore from HTTP Window

The fields that can be configured are described below:

Parameter	Description	
Unit	Select the switch unit that will be used for this configuration here.	
Source File	Enter the source filename and path of the configuration file located on the local PC. This field can be up to 64 characters long. Alternatively click the <b>Browse</b> button to navigate to the location of the configuration file located on the local PC.	
Destination File	Enter the destination filename and path where the configuration file should be stored on the Switch. This field can be up to 64 characters long.	
	Select the <b>running-config</b> option to restore and overwrite the running configuration file on the Switch.	
	Select the <b>startup-config</b> option to restore and overwrite the start- up configuration file on the Switch.	
Replace	Select this option to replace the current running configuration.	

Click the **Restore** button to initiate the configuration restore.

#### **Configuration Restore from TFTP**

This window is used to initiate a configuration restore from a TFTP server.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Restore from TFTP**, as shown below:

Configuration R	Configuration Restore from TFTP				
Unit	All				
TFTP Server IP	• IPv4				
	○ IPv6				
Source File	64 chars	]			
Destination File	64 chars	running-config startup-config			
Replace					
		Restore			

Figure 13-7 Configuration Restore from TFTP Window

The fields that can be configured are described below:

Parameter	Description	
Unit	Select the switch unit that will be used for this configuration here.	
TFTP Server IP	Enter the TFTP server's IP address here.	
	When the <b>IPv4</b> option is selected, enter the IPv4 address of the TFTP server in the space provided.	
	When the <b>IPv6</b> option is selected, enter the IPv6 address of the TFTP server in the space provided.	
Source File	Enter the source filename and path of the configuration file located on the TFTP server here. This field can be up to 64 characters long.	
Destination File	Enter the destination filename and path where the configuration file should be stored on the Switch. This field can be up to 64 characters long.	
	Select the <b>running-config</b> option to restore and overwrite the running configuration file on the Switch.	
	Select the <b>startup-config</b> option to restore and overwrite the start- up configuration file on the Switch.	
Replace	Select this option to replace the current running configuration.	

Click the **Restore** button to initiate the configuration restore.

#### **Configuration Backup to HTTP**

This window is used to initiate a configuration file backup to a local PC using HTTP.

**NOTE:** The **Source File** (name and path) can be found in the **File System** window on page 89.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Backup to HTTP**, as shown below:

Configuration	Configuration Backup to HTTP		
Unit	1 💌		
Source File	64 chars	running-config startup-config	
		Backup	

Figure 13-8 Configuration Backup to HTTP Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
Source File	Enter the source filename and path of the configuration file located on the Switch here. This field can be up to 64 characters long.
	Select the <b>running-config</b> option to back up the running configuration file from the Switch.
	Select the <b>startup-config</b> option to back up the start-up configuration file from the Switch.

Click the **Backup** button to initiate the configuration file backup. Wait for the Web browser to prompt where to save the file on the local PC.

#### **Configuration Backup to TFTP**

This window is used to initiate a configuration file backup to a TFTP server.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Backup to TFTP**, as shown below:

Configuration Ba	ackup to TFTP	
Unit	1 💌	
TFTP Server IP	• • IPv4	
	◯ IPv6	
Source File	64 chars	running-config startup-config
Destination File	64 chars	
		Backup

Figure 13-9 Configuration Backup to TFTP Window

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
TFTP Server IP	Enter the TFTP server's IP address here. When the <b>IPv4</b> option is selected, enter the IPv4 address of the TFTP server in the space provided.
	When the <b>IPv6</b> option is selected, enter the IPv6 address of the TFTP server in the space provided.
Source File	Enter the source filename and path of the configuration file located on the switch here. This field can be up to 64 characters long.
	Select the <b>running-config</b> option to back up the running configuration file from the Switch.
	Select the <b>startup-config</b> option to back up the start-up configuration file from the Switch.
Destination File	Enter the destination filename and path where the configuration file should be stored on the TFTP server. This field can be up to 64 characters long.

The fields that can be configured are described below:

Click the **Backup** button to initiate the configuration file backup.

## Log Backup

#### Log Backup to HTTP

This window is used to initiate a system log backup to a local PC using HTTP.

To view the following window, click **Tools > Log Backup > Log Backup to HTTP**, as shown below:

Log Backup to HTTP		
Log Type	o System Log 🕥 Attack Log	
100.009/22/26/11-04480		Backup

Figure 13-10 Log Backup to HTTP Window

The fields that can be configured are described below:

Parameter	Description
Log Type	Select the log type that will be backed up to the local PC using HTTP.
	When System Log is selected, the system log will be backed up.
	When Attack Log is selected, the attack log will be backed up.

Click the **Backup** button to initiate the system log backup. Wait for the Web browser to prompt where to save the file on the local PC.

#### Log Backup to TFTP

This window is used to initiate a system log backup to a TFTP server.

To view the following window, click **Tools > Log Backup > Log Backup to TFTP**, as shown below:

Log Backup to T	Log Backup to TFTP		
TFTP Server IP	· · · • • • • • • • • • • • • • • • • •		
	◯ IPv6		
Destination File	64 chars	]	
Log Type	<ul> <li>System Log          O Attack Log         </li> </ul>		
		Backup	

Figure 13-11 Log Backup to TFTP Window

Parameter	Description	
TFTP Server IP	Enter the TFTP server's IP address here. When the <b>IPv4</b> option is selected, enter the IPv4 address of the TFTP server in the space provided. When the <b>IPv6</b> option is selected, enter the IPv6 address of the TFTP server in the space provided.	
Destination File	Enter the destination filename and path where the log file should be stored on the TFTP server. This field can be up to 64 characters long.	
Log Туре	Select the log type that will be backed up to the TFTP server. When <b>System Log</b> is selected, the system log will be backed up. When <b>Attack Log</b> is selected, the attack log will be backed up.	

The fields that can be configured are described below:

Click the **Backup** button to initiate the system log backup.

## Ping

Ping is a small program that sends ICMP Echo packets to the IPv4/IPv6 address you specify. The destination node then responds to or "echoes" the packets sent from the Switch. This is very useful to verify connectivity between the Switch and other nodes on the network.

To view the	following wi	ndow. click <sup>·</sup>	Tools > Pina	, as shown below:
10 11011 (110	Tono ming mi			

Ping				
IPv4	Ping			
۲	Target IPv4 Address			
0	Domain Name	255 chars	]	
	Ping Times (1-255)		✓ Infinite	
	Timeout (1-99)	1	sec	
	Source IPv4 Address			
				Start
IPv6	Ping			
	Target IPv6 Address	2233::1	1	
	Ping Times (1-255)			
	Timeout (1-99)	1	sec	
	Source IPv6 Address		]	
				Start

Figure 13-12 Ping Window

Parameter	Description
Target IPv4 Address	Select and enter an IP address to be pinged.
Domain Name	Select and enter the domain name of the system to discover.
Ping Times	Enter the number of times desired to attempt to Ping the IPv4 address configured in this window. Users may enter a number of times between 1 and 255. Tick the <b>Infinite</b> check box to keep sending ICMP Echo packets to the specified IP address until the program is stopped.
Timeout	Select a timeout period between 1 and 99 seconds for this Ping message to reach its destination. If the packet fails to find the IP address in this specified time, the Ping packet will be dropped.
Source IPv4 Address	Enter the source IPv4 address. If the current switch has more than one IP address, you can enter one of them to this field. When entered, this IPv4 address will be used as the packets' source IP address sent to the remote host, or as primary IP address.

The fields that can be configured for **IPv4 Ping** are described below:

The fields that can be configured for IPv6 Ping are described below:

Parameter	Description
Target IPv6 Address	Enter an IPv6 address to be pinged.
Ping Times	Enter the number of times desired to attempt to Ping the IPv6 address configured in this window. Users may enter a number of times between 1 and 255. Tick the <b>Infinite</b> check box to keep sending ICMP Echo packets to the specified IPv6 address until the program is stopped.
Timeout	Select a timeout period between 1 and 99 seconds for this Ping message to reach its destination. If the packet fails to find the IP address in this specified time, the Ping packet will be dropped.

Parameter	Description
	Enter the source IPv6 address. If the current switch has more than one IPv6 address, you can enter one of them to this field. When entered, this IPv6 address will be used as the packets' source IP address sent to the remote host, or as primary IP address.

Click the Start button to initiate the Ping Test for each individual section.

After clicking the **Start** button in **IPv4 Ping** section, the following **IPv4 Ping Result** section will appear:

Ping						
/ IPv4 Ping Result						
<pre>[1] Reply from 192.168.70.1, time=10ms [2] Reply from 192.168.70.1, time&lt;10ms</pre>

Click the **Stop** button to halt the Ping Test.

Click the **Back** button to return to the IPv4 Ping section.

### **Trace Route**

The trace route page allows the user to trace a route between the Switch and a given host on the network.

To view the following window, clic	k <b>Tools &gt; Trace Route</b> , as shown below:
------------------------------------	---

Trac	e Route			
IPv4	Trace Route			
۲	IPv4 Address			
0	Domain Name	255 chars	]	
	Max TTL (1-60)	30	]	
	Port (1-65535)	33434	]	
	Timeout (1-65535)	5	sec	
	Probe Times (1-9)	1	S	Start
IPv6	Trace Route			
	IPv6 Address		1	
	IPvo Address			
	Max TTL (1-60)	30		
	Port (1-65535)	33434	]	
	Timeout (1-65535)	5	sec	
	Probe Times (1-9)	1	]	Start

Figure 13-15 Trace Route Window

The fields that can be configured for IPv4 Trace Route are described below:

Parameter	Description	
IPv4 Address	Select and enter the IPv4 address of the destination here.	
Domain Name	Select and enter the domain name of the destination here.	
Max TTL	Enter the Time-To-Live (TTL) value of the trace route request here. This is the maximum number of routers that a trace route packet can pass. The trace route option will cross while seeking the network path between two devices. The range for the TTL is 1 to 60 hops.	
Port	Enter the port number here. The value range is from 1 to 65535.	
Timeout	Enter the timeout period while waiting for a response from the remote device here. A value of 1 to 65535 seconds can be specified. The default is 5 seconds.	
Probe Times	Enter the probe time number here. The range is from 1 to 9. If unspecified, the default value is 1.	

The fields that can be configured for IPv6 Trace Route are described below:

Parameter	Description
IPv6 Address	Select and enter the IPv6 address of the destination here.
Max TTL	Enter the TTL value of the trace route request here. This is the maximum number of routers that a trace route packet can pass. The trace route option will cross while seeking the network path between two devices. The range for the TTL is 1 to 60 hops.
Port	Enter the port number here. The value range is from 1 to 65535.
Timeout	Enter the timeout period while waiting for a response from the remote device here. A value of 1 to 65535 seconds can be specified. The default is 5 seconds.

Parameter	Description
Probe Times	Enter the probe time number here. The range is from 1 to 9. If unspecified, the default value is 1.

Click the Start button to initiate the route trace for each individual section.

After clicking the **Start** button in **IPv4 Trace Route** section, the following **IPv4 Trace Route Result** section will appear:

Trace Route

Figure 13-17 Ping - IPv6 Ping Result Window

Click the **Back** button to stop the trace route and return to the IPv6 Trace Route section.

### Language Management

This window is used to install the language file to the Switch.

To view the following window, click **Tools > Language Management**, as shown below:

Language Management			
Language File	Browse		
		Apply	

Figure 13-18 Language Management Window

The fields that can be configured are described below:

Parameter	Description
Language File	Click the <b>Browse</b> button to navigate to the location of the firmware file located on the local PC.

Click the **Apply** button to initiate the language pack installation.

#### Reset

This window is used to reset the Switch's configuration to the factory default settings.

To view the following window, click **Tools > Reset**, as shown below:

Reset	
Reset	
The Switch will be reset to its factory defaults including IP address and stacking information, and then will save, reboot.	
<ul> <li>The Switch will be reset to its factory defaults including in dedress and then will save, reboot.</li> </ul>	
The Switch will be reset to its factory defaults including IP address.	Apply

Select one of the following options:

- The Switch will be reset to its factory defaults including IP address and stacking information, and the will save, reboot. To reset the Switch's configuration to its factory default settings.
- The Switch will be reset to its factory default except IP address, and then will save, reboot To reset the Switch's configuration to its factory default settings. This option will exclude the IP address from being changed.
- The Switch will be reset to its factory defaults including IP address To reset the Switch's configuration to its factory default settings.

Click the Apply button to initiate the factory default reset and reboot the Switch.

### **Reboot System**

This window is used to reboot the Switch and alternatively save the configuration before doing so.

To view the following window, click **Tools > Reboot System**, as shown below:

Reboot System	
Reboot System	
Do you want to save the settings ? <ul> <li>Yes</li> <li>No</li> </ul>	Reboot
If you do not save the settings, all changes made in this session will be lost.	

Figure 13-20 Reboot System Window

When rebooting the Switch, any configuration changes that was made during this session, will be lost unless the **Yes** option is selected when asked to save the settings.

Click the **Reboot** button to alternatively save the settings and reboot the Switch.

Reboot System	
Saving and rebooting system, please wait	
10%	

Figure 13-21 Reboot System - Rebooting Window

### Wizard

Click this option to start the Smart Wizard. For more information about the Smart Wizard, refer to **Smart Wizard** on page 4.

## **Online Help**

### **D-Link Support Site**

Click this option to connect to the D-Link support website. An Internet connection is required.

### **User Guide**

Click this option to connect to the online user guide for the Switch. An Internet connection is required.

## **Surveillance Mode**

Click the **Surveillance Mode** button in the toolbar to change the Web UI mode and style from Standard Mode to Surveillance Mode. An unsuccessful change will display a warning message.

**NOTE:** All active Web UI user sessions can only access the same Web UI mode at the same time. The mode can only be changed when one user session is active. The mode cannot be changed when another user session is connected to the Web UI.

After clicking the **Surveillance Mode** option in the **Toolbar**, the following window will appear.

Figure 13-22 Surveillance Mode Confirmation Message

The window above displays a message that the abovementioned configurations need to be changed when access to the Surveillance Mode is given.

Click the **OK** button to continue.

Click the Cancel button to return to the Standard Mode.

After successfully switching to the Surveillance Mode on the Web UI of the Switch, the following window will appear.

Congratulations!
lf you require assistance, please click 🥐 Help on toolbar.
Yes! I understand.

Figure 13-23 Surveillance Mode 'Congratulations' Message

Click the Yes! I understand button to continue.

## Logout

Click this option to log out of the Web UI of the Switch

# **14. Surveillance Mode**

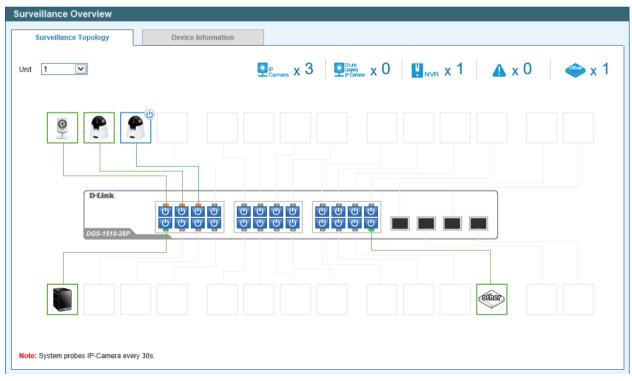

Surveillance Overview Port Information IP-Camera Information NVR Information PoE Information PoE Scheduling Management Time Surveillance Settings Surveillance Log Health Diagnostic Toolbar

# **Surveillance Overview**

In this window, the **Surveillance Topology** and **Device Information** are displayed. It appears automatically when you access the Surveillance Mode in the Web UI of the Switch.

## **Surveillance Topology**

This window provides more information about what is connected to each port. Hover with the mouse pointer over each device icon to get more information about the recognized device (such as the number of devices, device type, IP address, power consumption, link speed, and errors). Click on the '**more'** link to get more information about the devices connected to the port.

To return to the Surveillance Overview window after viewing other windows, click the **DGS-1510-28XMP** link.

Figure 14-1 Surveillance Overview Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the unit ID of the Switch in the stack that will be used here.

The following icons are available in this window and are described below:

Parameter	Description
PP Camera X 3	This displays the total amount of ONVIF IP cameras connected to the Ethernet ports on the Switch.
Picamera X 0	This displays the total amount of D-Link legacy IP cameras (detected by ASV 1.0) connected to the Ethernet ports on the Switch.
	This displays the total amount of Network Video Recorders (NVRs) connected to the Ethernet ports on the Switch.
<b>▲</b> x 0	This displays the amount of surveillance warnings generated on the Switch.
where x 1	This displays the amount of other devices connected to the Ethernet ports on the Switch.
<b>*</b>	This displays the device connected to the Ethernet port on the Switch. The green border around the image indicates that the device is a non-PoE device. The PD Alive function cannot be used on this device.
	This displays the device connected to the Ethernet port on the Switch. The blue border around the image indicates that the device is a PoE device and is receiving power from the Switch using PoE. The PD Alive function can be used on this device.
<b>心</b>	Click this icon to disable PoE on the port.
<del>С</del>	Click this icon to enable PoE on the port.

After clicking the *icon*, the following window will appear:

PoE Configuration		
Are you sure you want to disable PoE on port 8?	,	
	Apply	Cancel

After clicking the **b** icon, the following window will appear:

PoE	Config	uratio	n

	Normal	Group Details		<b>1</b> -	-

To view the following window, click **Port Information**, as shown below:

Figure 14-7 Port Information Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the unit ID of the Switch in the stack that will be used here.

Parameter	Description
🔽 x 5	This displays the total amount of Ethernet devices connected to the Ethernet ports on the Switch.
6 Mbps	The displays the total amount of inbound bandwidth that is being used by the Ethernet devices connected to the Ethernet ports on the Switch.
Provide A Camera X 3	This displays the total amount of ONVIF IP cameras connected to the Ethernet ports on the Switch.
NVR x 1	This displays the total amount of NVRs connected to the Ethernet ports on the Switch.

	Description
Parameter	Description
👐 x 1	This displays the total amount of other Ethernet devices connected to the Ethernet ports on the Switch.
eth1/0/1	This displays the Ethernet port number on the Switch.
V 0 Mbps	This displays the amount of inbound bandwidth that is being used by the Ethernet device connected to the respective Ethernet port.
<b>∿/</b> -	This displays the Ethernet cable length between the device and the Ethernet port on the Switch.
	This displays the PoE status on the port.
3.9W/15.4W	This displays the power consumption and power class of the PD connected to the Ethernet port.
📌 🛛 Normal	This displays the Loopback Detection status on the Ethernet port.
	Normal - Specifies that there are no loops in the network.
	<b>Loop</b> - Specifies that there is a loop in the network. Click the <b>Loop</b> link to navigate to the <b>Health Diagnostic</b> window.
Group Details	If an ONVIF IP camera or NVR is connected to the port, the <b>Group Details</b> link will be available. Select the <b>Group Details</b> link to access the Group Details window.
Video Management Server 💌	If a network device is connected to the port that is neither an ONVIF IP camera nor NVR, the device type can be selected. Options to choose from are Video Management Server, VMS Client/Remote Viewer, Video Encoder, Network Storage, and Other IP Surveillance Device.

## **Group Details**

After clicking Group Details link, the following window will appear.

Port Information / Group Details			
/ Group Details			<b>O</b> Back
Port eth1/0/1			
🛞   0 📇 IP-Camera	CCS-942LB1 / DCS-942LB1	🏀   192.168.0.21(B0-C5-54-26-B7-A3) 💬   -	

Figure 14-8 Port Information / Group Details Window

Parameter	Description
Port eth1/0/5	This displays the Ethernet port number on the Switch.
🔆   0	This displays the group ID of the IP camera or NVR on the port.
IP-Camera	This displays the type of device connected to the port. The can be either <b>IP-Camera</b> or <b>NVR</b> .

Parameter	Description
CCS-5211L / DCS-5211L	This displays the model name of the IP camera.
(0 192.168.0.23(28-10-7B-04-60-EC)	This displays the IP Address and MAC Address of the IP camera or NVR.
DCS-942LB1	This displays the description of the device connected to the port.

Click the **< Back** option to return to the previous window.

# **IP-Camera Information**

This window is used to display IP camera information.

To view the following window, click IP-Camera Information, as shown below:

Source Unit 1 💟 startup-config 💙 C:/config.cfg	Source Unit	1 💟 startup-config 🔽 C:/config.cfg
Destination Unit 1 🔽 running-config 🔽 C:/config.cfg	Destination Unit	I vinning-config C:/config.cfg
Apply Cancel		Apply Cancel

Figure 14-16 File System (Copy) Window

The fields that can be configured are described below:

Parameter	Description
Source	Specifies to configure the source file that will be copied.
Destination	Specifies to configure the destination file that will be copied.
Unit	Select the unit ID of the Switch in the stack that will be used here.

Parameter	Description
startup-config	Select this option to use the startup configuration of the Switch in the copy.
running-config	Select this option to use the running configuration of the Switch in the copy.
Source File	Select this option and then manually enter the path and name of the source file that will be copied in the space provided.
Destination File	Select this option and then manually enter the path and name of the destination file that will be copied in the space provided.
Replace	Select this option to replace the current running configuration with the source file.

Click the **Apply** button to initiate the copy.

Click the **Cancel** button the discard the process.

# Time

## **Clock Settings**

This window is used to display and configure the time settings on the Switch.

To view the following window, click **Time > Clock Settings**, as shown below:

Clock Settings		
Clock Settings		
Time (HH:MM:SS)	18:31:59	
Date (DD / MM / YYYY)	2/1/2000	Apply

Figure 14-17 Clock Settings Window

The fields that can be configured are described below:

Parameter	Description
Time (HH:MM:SS)	Enter the current time in hours, minutes, and seconds.
Date (DD/MM/YYYY)	Enter the current day, month, and year to update the system clock.

Click the **Apply** button to accept the changes made.

### **SNTP Settings**

This window is used to display and configure the Simple Network Time Protocol (SNTP) settings.

To view the following window, click **Time > SNTP Settings**, as shown below:

SNTP Settings				
SNTP Global Settings				
Current Time Source	System Clock Disabled			
SNTP State Poll Interval (30-99999)	720	sec		Apply
SNTP Server Setting				
IPv4 Address				
				Add
Total Entries: 1				
SNTP server	Stratum	Version	Last Receive	
10.90.90.123	-	-		Delete

Figure 14-18 SNTP Settings Window

The fields that can be configured in the SNTP Global Settings section are described below:

Parameter	Description
SNTP State	Select to enable or disable the SNTP feature here.
Poll Interval	Enter the poll interval value here. The range is from 30 to 99999 seconds. By default, this value is 720 seconds.

Click the **Apply** button to accept the changes made.

The fields that can be configured in the SNTP Server Setting section are described below:

Parameter	Description
IPv4 Address	Enter the IPv4 address of the SNTP server here.

Click the Add button to add the SNTP server to the configuration.

Click the **Delete** button to remove the SNTP server from the configuration.

## **Surveillance Settings**

This window is used to display and configure the surveillance settings. The Switch has only one Surveillance VLAN. This surveillance VLAN also supports to recognize the surveillance devices, like IP Cameras (IPC) and Network Video Recorders (NVR), using the ONVIF protocol.

Surveillance VLAN Settings					
VLAN ID (2-4094)	4094				Apply
P Settings					
Get IP From	Static

Host IPv4 Address Total Entries: 1 Server IP	Severity	Facility			Apply
Host IPv4 Address Total Entries: 1 Server IP 172:18.65:11	Severity Emergencies	Facility			Apply
Host IPv4 Address Total Entries: 1 Server IP 172.18.65.11 Jplink Port Settings	Severity Emergencies	Facility			Apply
Host IPv4 Address Total Entries: 1 Server IP 172.18.65.11 Jplink Port Settings Unit From Port	Severity Emergencies	Facility			Apply Delete

To view the following window, click **Surveillance Settings**, as shown below:

Figure 14-19 Surveillance Settings Window

The fields that can be configured in the **Surveillance VLAN Settings** section are described below:

Parameter	Description
VLAN ID	Enter the ID of the surveillance VLAN here. The range is from 2 to 4094.

Click the **Apply** button to accept the changes made.

The fields that can be configured in the **IP Settings** section are described below:

Parameter	Description	
Get IP From	Select the method used to configure the IP address settings on the Switch here. Options to choose from are:	
	<ul> <li>Static - Specifies that the IP address settings will be manually configured.</li> <li>DHCP - Specifies that the IP address settings will be automatically obtained from a DHCP server on the network.</li> </ul>	
IP Address	Enter the IPv4 address of the Switch here.	
Mask	Enter the IPv4 subnet mask of the Switch here.	
Gateway	Enter the IPv4 address of the default gateway here.	

Click the **Apply** button to accept the changes made.

The fields that can be configured in the **SNMP Host Settings** section are described below:

Parameter	Description
Host IPv4 Address	Enter the IPv4 address of the SNMP host here.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

The fields that can be configured in the **Log Server** section are described below:

Parameter	Description	
Host IPv4 Address	Enter the IPv4 address of the syslog server here.	

Click the Apply button to accept the changes made.

Click the **Delete** button to remove the specified entry.

The uplink ports join all surveillance VLANs since they forward surveillance traffic to other switches. It is recommended to connect uplink ports to the other switches because the discovery process is disabled on these ports.

The fields that can be configured in the Uplink Port Settings section are described below:

Parameter	Description	
Unit	Select the unit ID of the Switch in the stack that will be used here.	
From Port / To Port	Select the uplink port range that will be used here.	

Click the Apply button to accept the changes made.

Click the **Delete** button to remove the specified entry.

## **Surveillance Log**

This window is used to display the surveillance log.

To view the following window, click Surveillance Log, as shown below:

			Refresh Backup
Index	Time	Level	Log Description
1	2000-01-01 00:25:32	INFO(6)	ASV: Remove IPC(192.168.0.20, MAC:B0-C5-54-26-B7-8

7	2000-01-01 00:06:00	INFO(6)	ASV: Add IPC(192.168.0.20, MAC:B0-C5-54-26-B7-86)
8	2000-01-01 00:05:54	INFO(6)	ASV: Add NVR(192.168.0.202, MAC:00-0E-C6-C1-F6-02)
9	2000-01-01 00:05:51	INFO(6)	ASV: Add IPC(192.168.0.30, MAC:28-10-7B-26-A7-EF)

Click the Refresh button to refresh the information displayed in the table.

Click the **Backup** button to upload the surveillance log to the PC using HTTP.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

# **Health Diagnostic**

This window is used to display Health Diagnostics information, Discovered Surveillance Devices information, and initiate a cable distance test on all or selected ports on the Switch. For each link-up port, the system will check the link status, PoE status and error counters periodically. This page will refresh every 30s.

To view the following window, click **Health Diagnostic**, as shown below:

alth Diagnos	tic					
Health Diagnostic	:					
Unit						Detect All
Port	Loopback Detection Status	Cable Link	PoE Status	Tx/Rx CRC Counter	Discovered Surveillance Devices	Detect Distance
eth1/0/1	Normal	Pass	Searching	0/0	<u>1</u>	Detect

eth1/0/9	-	-	-	-	-	Detect
eth1/0/10	-	-	-	-	-	Detect

Figure 14-21 Health Diagnostic Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the unit ID of the Switch in the stack that will be used here.

Parameter	Description
Port	This field displays the Ethernet port number.
Loopback Detection Status	This field displays the Loopback Detection status on the Ethernet port. It can be one of the following:
	<ul> <li>Normal - No loop is detected on the port.</li> <li>Loop - A loop is detected on the port.</li> </ul>
Cable Link	This field displays the cable link status. It can be one of the following:
	• <b>PASS</b> - The port link is up and operating in the full-duplex mode.
	<ul> <li>10M Half - The port link is up and operating at 10 Mbps speed and in the half-duplex mode.</li> </ul>
	100M Half - The port link is up and operating at 100 Mbps speed and in the half-duplex mode.
PoE Status	This field displays the PoE status. It can be one of the following: <b>PASS</b> , <b>MPS (Maintain Power Signature) Absent</b> , <b>PD Short</b> ,

The fields that are displayed in the table are described below:

Parameter	Description		
	Overload, Power Denied, Thermal Shutdown, Startup Failure, or Classification Failure.		
Tx/Rx CRC Counter	This field displays the TX/RX CRC counter.		
Discovered Surveillance Devices	This field displays the number of ONVIF IP cameras and NVRs discovered on the port. Click the hyperlink ( <u>1</u> ) to view the group details associated with IP camera or NVR connected to the port. For more information, refer to <b>Group Details</b> on page 397.		
Detect Distance	Click the <b>Detect</b> button to initiate a cable distance test on the specified port.		

Click the Detect All button to initiate a cable distance test on all the ports of the Switch.

## Toolbar

### Wizard

Click this option to start the Smart Wizard. For more information about the Smart Wizard, refer to Smart Wizard on page 4.

## Tools

### Firmware Upgrade & Backup

#### **Firmware Upgrade from HTTP**

This window is used to initiate a firmware upgrade from a local PC using HTTP.

To view the following window, click Tools > Firmware Upgrade & Backup > Firmware Upgrade from HTTP, as shown below:

Firmware Upgrade from HTTP			
Unit	All		
Source File	Browse		
Destination File	64 chars		
	Upgrade		

Parameter Description

The fields that can be configured are described below:

Unit	Select the switch unit that will be used for this configuration here.	
Source File	Enter the source filename and path of the firmware file located on the local PC. This field can be up to 64 characters long. Alternatively click the <b>Browse</b> button to navigate to the location of the firmware file located on the local PC.	
Destination File	Enter the destination filename and path where the new firmware should be stored on the Switch. This field can be up to 64 characters long.	

Click the **Upgrade** button to initiate the firmware upgrade.

#### **Firmware Backup to HTTP**

This window is used to initiate a firmware backup to a local PC using HTTP.

**NOTE:** The **Source File** (name and path) can be found in the **File System** window on page 403.

To view the following window, click **Tools > Firmware Upgrade & Backup > Firmware Backup to HTTP**, as shown below:

Firmware Backu	Firmware Backup to HTTP		
Unit Source File	1 V 64 chars Backup		

Figure 14-23 Firmware Backup to HTTP Window

The fields that can be configured are described below:

Parameter	Description	
Unit	Select the switch unit that will be used for this configuration here.	
Source File	Enter the source filename and path of the firmware file located on the Switch here. This field can be up to 64 characters long.	

Click the **Backup** button to initiate the firmware backup. Wait for the Web browser to prompt where to save the file on the local PC.

#### **Configuration Restore & Backup**

#### **Configuration Restore from HTTP**

This window is used to initiate a configuration restore from a local PC using HTTP.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Restore from HTTP**, as shown below:

Configuration Rest	ore from HTTP
Unit	All
Source File	Browse
Destination File	64 chars running-config startup-config
Replace	
	Restore

Figure 14-24 Configuration Restore from HTTP Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
Source File	Enter the source filename and path of the configuration file located on the local PC. This field can be up to 64 characters long. Alternatively click the <b>Browse</b> button to navigate to the location of the configuration file located on the local PC.

Parameter	Description
Destination File	Enter the destination filename and path where the configuration file should be stored on the Switch. This field can be up to 64 characters long.
	Select the <b>running-config</b> option to restore and overwrite the running configuration file on the Switch.
	Select the <b>startup-config</b> option to restore and overwrite the start- up configuration file on the Switch.
Replace	Select this option to replace the current running configuration.

Click the **Restore** button to initiate the configuration restore.

#### **Configuration Backup to HTTP**

This window is used to initiate a configuration file backup to a local PC using HTTP.

**NOTE:** The **Source File** (name and path) can be found in the **File System** window on page 403.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Backup to HTTP**, as shown below:

Configuration Backup to HTTP			
Unit	1		
Source File	64 chars	unning-config startup-config	
		Backup	

#### Figure 14-25 Configuration Backup to HTTP Window

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
Source File	Enter the source filename and path of the configuration file located on the Switch here. This field can be up to 64 characters long. Select the <b>running-config</b> option to back up the running configuration file from the Switch.
	Select the <b>startup-config</b> option to back up the start-up configuration file from the Switch.

Click the **Backup** button to initiate the configuration file backup. Wait for the Web browser to prompt where to save the file on the local PC.

#### Language Management

This window is used to install the language file to the Switch.

To view the following window, click **Tools > Language Management**, as shown below:

Language Managemen	t		
Language File	Browse Apply		
Figure 14-26 Language Management Window			

The fields that can be configured are described below:

Parameter	Description
Language File	Click the <b>Browse</b> button to navigate to the location of the firmware file located on the local PC.

Click the **Apply** button to initiate the language pack installation.

#### Reset

This window is used to reset the Switch's configuration to the factory default settings.

To view the following window, click **Tools > Reset**, as shown below:

Reset	
Reset <ul> <li>The Switch will be reset to its factory defaults including IP address and stacking information, and then will save, reboot.</li> <li>The Switch will be reset to its factory defaults including IP address, and then will save, reboot.</li> <li>The Switch will be reset to its factory defaults including IP address.</li> </ul> Apply	

Select one of the following options:

- The Switch will be reset to its factory defaults including IP address and stacking information, and the will save, reboot. To reset the Switch's configuration to its factory default settings.
- The Switch will be reset to its factory default except IP address, and then will save, reboot To reset the Switch's configuration to its factory default settings. This option will exclude the IP address from being changed.
- The Switch will be reset to its factory defaults including IP address To reset the Switch's configuration to its factory default settings.

Click the Apply button to initiate the factory default reset and reboot the Switch.

#### **Reboot System**

This window is used to reboot the Switch and alternatively save the configuration before doing so.

To view the following window, click **Tools > Reboot System**, as shown below:

Reboot System			
Reboot System         Do you want to save the settings ? • Yes          No         If you do not save the settings, all changes made in this session will be lost.	Reboot		

Figure 14-28 Reboot System Window

When rebooting the Switch, any configuration changes that was made during this session, will be lost unless the **Yes** option is selected when asked to save the settings.

Click the **Reboot** button to alternatively save the settings and reboot the Switch.

#### Save

### **Save Configuration**

This window is used to save the running configuration to the start-up configuration or the file system of the Switch. This is to prevent the loss of configuration in the event of a power failure.

To view the following window, click **Save > Save Configuration**, as shown below:

Save Configuration			
Save Configuration	File Path	C:/config.cfg	Apply

Figure 14-29 Save Configuration Window

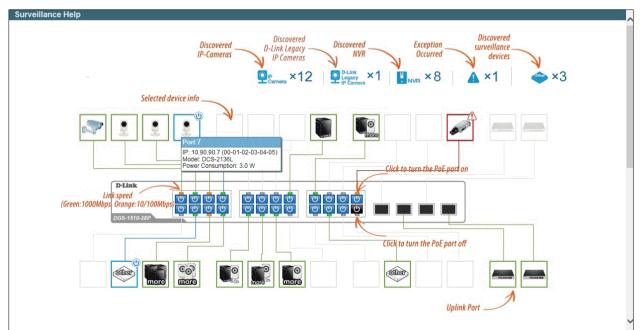

The fields that can be configured are described below:

Parameter	Description
Unit	Select the switch unit that will be used for this configuration here.
File Path	Enter the filename and path in the space provided.

Click the **Apply** button to save the configuration.

## Help

Click this option to access the built-in Surveillance Help window.

After clicking the Help option, the following window will appear.

Figure 14-30 Help (Diagram) Window

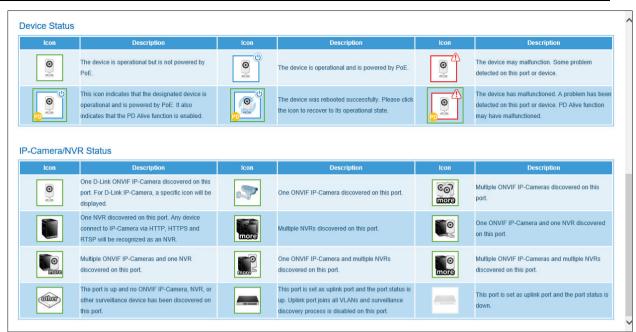

Figure 14-31 Help (Table) Window

## **Online Help**

### **D-Link Support Site**

Click this option to connect to the D-Link support website. An Internet connection is required.

### **User Guide**

Click this option to connect to the online user guide for the Switch. An Internet connection is required.

### **Standard Mode**

Click the **Standard Mode** button in the toolbar to change the Web UI mode and style from Surveillance Mode to Standard Mode.

**NOTE:** All active Web UI user sessions can only access the same Web UI mode at the same time. The mode can only be changed when one user session is active. The mode cannot be changed when another user session is connected to the Web UI.

## Logout

Click this option to log out of the Web UI of the Switch

# **Appendix A - System Log Entries**

The following tables list the system log entries and their corresponding meanings that will appear in the System Log of this switch.

#### 802.1X

Log Description	Severity
Event Description: 802.1X Authentication failure.	Critical
Log Message: 802.1X authentication fail [due to <reason>] from (Username: <username>, <interface-id>, MAC: <mac-address>)</mac-address></interface-id></username></reason>	
Parameters Description:	
reason: The reason for the failed authentication. The possible reason may be:	
(1) user authentication failure.	
(2) no server(s) responding.	
(3) no servers configured.	
(4) no resources.	
(5) user timeout expired.	
username: The user that is being authenticated.	
interface-id: The switch interface number.	
mac-address: The MAC address of the authenticated device.	
Event Description: 802.1X Authentication successful.	Informational
Log Message: 802.1X authentication success (Username: <username>, <interface-id>, MAC: <mac-address>)</mac-address></interface-id></username>	
Parameters Description:	
username: The user that is being authenticated.	
interface-id: The interface name.	
mac-address: The MAC address of the authenticated device.	

#### AAA

Log Description	Severity
Event Description: This log will be generated when AAA global state is enabled or disabled.	Informational
Log Message: AAA is <status></status>	
Parameters Description:	
status: The status indicates the AAA enabled or disabled.	
Event Description: This log will be generated when login successfully.	Informational
Log Message: Successful login through <exec-type> [from <client-ip>] authenticated by AAA <aaa-method> <server-ip> (Username: <username>)</username></server-ip></aaa-method></client-ip></exec-type>	
Parameters Description:	
exec-type: It indicates the EXEC types, e.g.: Console, Telnet, SSH, Web, Web(SSL).	
client-ip: It indicates the client's IP address if valid through IP protocol.	
aaa-method: It indicates the authentication method, e.g.: none, local, server.	
server-ip: It indicates the AAA server IP address if authentication method is remote server.	
Username: It indicates the username for authentication.	
Event Description: This log will be generated when login failure.	Warning

	Coverity.
Log Description	Severity
Log Message: Login failed through <exec-type> [from <client-ip>] authenticated by AAA <aaa-method> <server-ip> (Username: <username>)</username></server-ip></aaa-method></client-ip></exec-type>	
Parameters Description:	
exec-type: It indicates the EXEC types, e.g.: Console, Telnet, SSH, Web, Web(SSL).	
client-ip: It indicates the client's IP address if valid through IP protocol.	
aaa-method: It indicates the authentication method, e.g.: local, server.	
server-ip: It indicates the AAA server IP address if authentication method is remote server.	
username: It indicates the username for authentication.	
Event Description: This log will be generated when the remote server does not respond to the login authentication request.	Warning
Log Message: Login failed through <exec-type> [from <client-ip>] due to AAA server <server-ip> timeout (Username: <username>)</username></server-ip></client-ip></exec-type>	
Parameters Description:	
exec-type: It indicates the EXEC types, e.g.: Console, Telnet, SSH, Web, Web(SSL).	
client-ip: It indicates the client's IP address if valid through IP protocol.	
server-ip: It indicates the AAA server IP address.	
username: It indicates the username for authentication.	
Event Description: This log will be generated when enable privilege successfully.	Informational
Log Message: Successful enable privilege through <exec-type> [from <client- ip&gt;] authenticated by AAA <aaa-method> <server-ip> (Username: <username>)</username></server-ip></aaa-method></client- </exec-type>	
Parameters Description:	
exec-type: It indicates the EXEC types, e.g.: Console, Telnet, SSH, Web, Web(SSL).	
client-ip: It indicates the client's IP address if valid through IP protocol.	
aaa-method: It indicates the authentication method, e.g.: none, local, server.	
server-ip: It indicates the AAA server IP address if authentication method is remote server.	
Username: It indicates the username for authentication.	
Event Description: This log will be generated when enable privilege failure. Log Message: Enable privilege failed through <exec-type> [from <client-ip>]</client-ip></exec-type>	Warning
authenticated by AAA <aaa-method> <server-ip> (Username: <username>) Parameters Description:</username></server-ip></aaa-method>	
exec-type: It indicates the EXEC types, e.g.: Console, Telnet, SSH, Web, Web(SSL).	
client-ip: It indicates the client's IP address if valid through IP protocol.	
aaa-method: It indicates the authentication method, e.g.: local, server.	
server-ip: It indicates the AAA server IP address if authentication method is remote server.	
username: It indicates the username for authentication.	
Event Description: This log will be generated when the remote server does not respond to the enable password authentication request.	Warning
Log Message: Enable privilege failed through <exec-type> [from <client-ip>] due to AAA server <server-ip> timeout (Username: <username>)</username></server-ip></client-ip></exec-type>	
Parameters Description:	
exec-type: It indicates the EXEC types, e.g.: Console, Telnet, SSH, Web, Web(SSL).	
client-ip: It indicates the client's IP address if valid through IP protocol.	

	scription	Severity
	server-ip: It indicates the AAA server IP address.	
	username: It indicates the username for authentication.	
	escription: This log will be generated when RADIUS assigned a valid D attributes.	Informational
	ssage: RADIUS server <server-ip> assigned VID: <vid> to port ce-id&gt; (Username: <username>)</username></vid></server-ip>	
Paramet	ters Description:	
	server-ip: It indicates the RADIUS server IP address.	
	vid: The assign VLAN ID that authorized by from RADIUS server.	
	Interface-id: It indicates the port number of the client authenticated.	
	Username: It indicates the username for authentication.	
	escription: This log will be generated when RADIUS assigned a valid Ith attributes.	Informational
	ssage: RADIUS server <server-ip> assigned <direction> bandwidth: old&gt; to port <interface -id=""> (Username: <username>)</username></interface></direction></server-ip>	
Paramet	ters Description:	
:	server-ip: It indicates the RADIUS server IP address.	
	Direction: It indicates the direction for bandwidth control, e.g.: ingress or egress.	
	Threshold: The assign threshold of bandwidth that authorized by from RADIUS server.	
	interface-id: It indicates the port number of the client authenticated.	
	Username: It indicates the username for authentication.

#### **ARP Spoofing Prevention**

Log Description	Severity
Event Description: A fake ARP packet detected by ARP Spoofing Prevention. Log Message: Gateway <ipaddr> is under attack by <macaddr> from <interface-id></interface-id></macaddr></ipaddr>	Warning
Parameters Description:	
ipaddr: The IP address of the gateway.	
macaddr: The MAC address of a hacker.	
interface-id: The interface where a hacker is located.	

### Auto Save Configuration

Log Description	Severity
Event Description: Record the event when the configure information of DDP is saved automatically.	Informational
Log Message:CONFIG-6-DDPSAVECONFIG: [Unit <unitid>,]Configuration automatically saved to flash due to configuring from DDP(Username: <username>, IP: <ipaddr>)</ipaddr></username></unitid>	
Parameters Description:	
Unit: Box ID	
username: Represent current login user.	
ipaddr: Represent client IP address.	

#### Auto Surveillance VLAN

Log Description	Severity
Event Description: When a new surveillance device is detected on an interface.	Informational
Log Message: New surveillance device detected ( <interface-id>, MAC: <mac-address>)</mac-address></interface-id>	
Parameters Description:	
interface-id: Interface name.	
mac-address: Surveillance device MAC address.	
Event Description: When an interface which is enabled surveillance VLAN joins the surveillance VLAN automatically.	Informational
Log Message: <interface-id> add into surveillance VLAN <vid></vid></interface-id>	
Parameters Description:	
interface-id: Interface name.	
vid: VLAN ID.	
Event Description: When an interface leaves the surveillance VLAN and at the same time, no surveillance device is detected in the aging interval for that interface, the log message will be sent.	Informational
Log Message: <interface-id> remove from surveillance VLAN <vid></vid></interface-id>	
Parameters Description:	
interface-id: Interface name.	
vid: VLAN ID.	
Event Description: When an IPC is added in the surveillance VLAN, the log message will be sent.	Informational
Log Message: ASV: Add IPC( <ipaddr>)</ipaddr>	
Parameters Description:	
ipaddr: Represent the IP address of the IPC.	

Log Description	Severity
Event Description: When an IPC is removed from the surveillance VLAN, the log message will be sent.	Informational
Log Message: ASV: Remove IPC( <ipaddr>)</ipaddr>	
Parameters Description:	
ipaddr: Represent the IP address of the IPC.	
Event Description: When an NVR is added in the surveillance VLAN, the log message will be sent.	Informational
Log Message: ASV: Add NVR( <ipaddr>)</ipaddr>	
Parameters Description:	
ipaddr: Represent the IP address of the NVR.	
Event Description: When an NVR is removed from the surveillance VLAN, the log message will be sent.	Informational
Log Message: ASV: Remove NVR( <ipaddr>)</ipaddr>	
Parameters Description:	
ipaddr: Represent the IP address of the NVR.	
Event Description: When the mode of ASV 2.0 is changed by Web GUI, the log message will be sent.	Informational
Log Message: ASV: Mode change from <mode> to <mode></mode></mode>	
Parameters Description:	
mode: Represent the mode of ASV 2.0 and the mode can be standard or surveillance.	

#### **BPDU Attack Protection**

Log Description	Severity
Event Description: Record the event when the BPDU attack happened. Log Message: <interface-id> enter STP BPDU under protection state (mode: <mode>)</mode></interface-id>	Informational
Parameters Description: interface-id: Interface on which detected STP BPDU attack. mode: BPDU Protection mode of the interface. Mode can be drop, block, or shutdown	
Event Description: Record the event when the STP BPDU attack recovered. Log Message: <interface-id> recover from BPDU under protection state Parameters Description: interface-id: Interface on which detected STP BPDU attack.</interface-id>	Informational

#### Configuration/Firmware

Log Description	Severity
Event description: Firmware upgraded successfully. Log Message: [Unit <unitid>, ]Firmware upgraded by <session> successfully (Username: <username>[, IP: <ipaddr>, MAC: <macaddr>], Server IP: <serverip>, File Name: <pathfile>) Parameters description: unitID: The unit ID. session: The user's session. username: Represent current login user. ipaddr: Represent client IP address. macaddr : Represent client MAC address. serverIP: Server IP address.</pathfile></serverip></macaddr></ipaddr></username></session></unitid>	Informational

Log Description	Severity
pathFile: Path and file name on server.	
Event description: Firmware upgraded unsuccessfully.	
Log Message: [Unit <unitid>, ]Firmware upgraded by <session></session></unitid>	
unsuccessfully (Username: <username>[, IP: <ipaddr>, MAC: <macaddr>], Server IP: <serverip>, File Name: <pathfile>)</pathfile></serverip></macaddr></ipaddr></username>	
Parameters description:	
unitID: The unit ID.	Warning
session: The user's session.	vvarning
username: Represent current login user.	
ipaddr: Represent client IP address.	
macaddr : Represent client MAC address.	
serverIP: Server IP address.	
pathFile: Path and file name on server.	
Event description: Firmware uploaded successfully.	
Log Message: [Unit <unitid>, ]Firmware uploaded by <session> successfully (Username: <username>[, IP: <ipaddr>, MAC: <macaddr>], Server IP: <serverip>, File Name: <pathfile>)</pathfile></serverip></macaddr></ipaddr></username></session></unitid>	
Parameters description:	
unitID: The unit ID.	
session: The user's session.	Informational
username: Represent current login user.	
ipaddr: Represent client IP address.	
macaddr : Represent client MAC address.	
serverIP: Server IP address.	
pathFile: Path and file name on server.	
Event description: Firmware uploaded unsuccessfully. Log Message: [Unit <unitid>, ]Firmware uploaded by <session> unsuccessfully (Username: <username>[, IP: <ipaddr>, MAC: <macaddr>], Server IP: <serverip>, File Name: <pathfile>)</pathfile></serverip></macaddr></ipaddr></username></session></unitid>	
Parameters description:	
unitID: The unit ID.	
session: The user's session.	Warning
username: Represent current login user.	
ipaddr: Represent client IP address.	
macaddr : Represent client MAC address.	
serverIP: Server IP address.	
pathFile: Path and file name on server.	
Event description: Configuration downloaded successfully.	
Log Message: [Unit <unitid>, ]Configuration downloaded by <session> successfully. (Username: <username>[, IP: <ipaddr>, MAC: <macaddr>], Server IP: <serverip>, File Name: <pathfile>)</pathfile></serverip></macaddr></ipaddr></username></session></unitid>	
Parameters description:	
unitID: The unit ID.	Information -1
session: The user's session.	Informational
username: Represent current login user.	
ipaddr: Represent client IP address.	
macaddr : Represent client MAC address.	
serverIP: Server IP address.	
pathFile: Path and file name on server.	

Log Description	Severity
Log Message: [Unit <unitid>, ]Configuration downloaded by <session></session></unitid>

Log Message: [Unit <unitid>,] Log message uploaded by <session> successfully. (Username: <username>[, IP: <ipaddr>, MAC: <macaddr>])</macaddr></ipaddr></username></session></unitid>	Informational

Log Description	Severity
Parameters description:	
unitID: The unit ID.	
session: The user's session.	
username: Represent current login user.	
ipaddr: Represent client IP address.	
macaddr: Represent client MAC address.	
Event description: Log message uploaded unsuccessfully.	
Log Message: [Unit <unitid>,] Log message uploaded by <session> unsuccessfully. (Username: <username>[, IP: <ipaddr>, MAC: <macaddr>])</macaddr></ipaddr></username></session></unitid>	
Parameters description:	
unitID: The unit ID.	Warning
session: The user's session.	-
username: Represent current login user.	
ipaddr: Represent client IP address.	
macaddr: Represent client MAC address.	
Event description: Unknown type files downloaded unsuccessfully.	
Log Message: [Unit <unitid>, ]Downloaded by <session> unsuccessfully. (Username: <username>[, IP: <ipaddr>, MAC: <macaddr>], Server IP: <serverip>, File Name: <pathfile>)</pathfile></serverip></macaddr></ipaddr></username></session></unitid>	
Parameters description:	
unitID: The unit ID.	
session: The user's session.	Warning
username: Represent current login user.	
ipaddr: Represent client IP address.	
macaddr : Represent client MAC address.	
serverIP: Server IP address.	
pathFile: Path and file name on server.	

**NOTE:** 1. The user's session refers to Console, Web, SNMP, Telnet, and SSH sessions.

- 2. If the Switch is in the standalone state, there will be no unit ID in the log message.
- 3. If the configuration or firmware was downloaded or uploaded through the console, there will be no IP address and MAC address information in the log message.

#### DAI

Log Description	Severity
Event Description: This log will be generated when DAI detect invalid ARP packet.	Warning
Log Message: Illegal ARP <type> packets (IP: <ip-address>, MAC: <mac- address&gt;, VLAN <vlan-id>, on <interface-id>)</interface-id></vlan-id></mac- </ip-address></type>	
Parameters Description:	
type: The type of ARP packet, it indicates that ARP packet is request or ARP response.	
Event Description: This log will be generated when DAI detect valid ARP packet.	Informational
Log Message: Legal ARP <type> packets (IP: <ip-address>, MAC: <mac- address&gt;, VLAN <vlan-id>, on <interface-id>).</interface-id></vlan-id></mac- </ip-address></type>	

Log Description	Severity
Parameters Description:	
type: The type of ARP packet, it indicates that ARP packet is request or ARP response.	

#### DDM

Log Description	Severity
Event Description: when the any of SFP parameters exceeds from the warning threshold.	Warning
Log Message: Optical transceiver <interface-id> <component> <high-low> warning threshold exceeded</high-low></component></interface-id>	
Parameters Description:	
interface-id: port interface ID.	
component: DDM threshold type. It can be one of the following types:	
temperature	
supply voltage	
bias current	
TX power	
RX power	
high-low: High or low threshold.	
Event Description: when the any of SFP parameters exceeds from the alarm threshold.	Critical
Log Message: Optical transceiver <interface-id> <component> <high-low> alarm threshold exceeded</high-low></component></interface-id>	
Parameters Description:	
interface-id: port interface ID.	
component: DDM threshold type. It can be one of the following types:	
temperature	
supply voltage	
bias current	
TX power	
RX power	
high-low: High or low threshold.	
Event Description: when the any of SFP parameters recovers from the warning threshold.	Warning
Log Message: Optical transceiver <interface-id> <component> back to normal</component></interface-id>	
Parameters Description:	
interface-id: port interface ID.	
component: DDM threshold type. It can be one of the following types:	
temperature	
supply voltage	
bias current	
TX power	
RX power	

## DHCPv6 Client

Log Description	Severity
Event Description: DHCPv6 client interface administrator state changed. Log Message: DHCPv6 client on interface <ipif-name> changed state to [enabled   disabled]</ipif-name>	Informational

Log Description	Severity
Parameters Description:	
<ipif-name>: Name of the DHCPv6 client interface.</ipif-name>	
Event Description: DHCPv6 client obtains an ipv6 address from a DHCPv6 server.	Informational
Log Message: DHCPv6 client obtains an ipv6 address <ipv6address> on interface <ipif-name></ipif-name></ipv6address>	
Parameters Description:	
ipv6address: ipv6 address obtained from a DHCPv6 server.	
ipif-name: Name of the DHCPv6 client interface.	
Event Description: The ipv6 address obtained from a DHCPv6 server starts renewing.	Informational
Log Message: The IPv6 address <ipv6address> on interface <ipif-name> starts renewing</ipif-name></ipv6address>	
Parameters Description:	
ipv6address: ipv6 address obtained from a DHCPv6 server. ipif-name: Name of the DHCPv6 client interface.	
Event Description: The ipv6 address obtained from a DHCPv6 server renews success.	Informational
Log Message: The IPv6 address <ipv6address> on interface <ipif-name> renews success</ipif-name></ipv6address>	
Parameters Description:	
ipv6address: ipv6 address obtained from a DHCPv6 server.	
ipif-name: Name of the DHCPv6 client interface.	
Event Description: The ipv6 address obtained from a DHCPv6 server starts rebinding.	Informational
Log Message: The IPv6 address <ipv6address> on interface <ipif-name> starts rebinding</ipif-name></ipv6address>	
Parameters Description:	
ipv6address: ipv6 address obtained from a DHCPv6 server.	
ipif-name: Name of the DHCPv6 client interface.	
Event Description: The ipv6 address obtained from a DHCPv6 server rebinds success.	Informational
Log Message: The IPv6 address <ipv6address> on interface <ipif-name> rebinds success</ipif-name></ipv6address>	
Parameters Description:	
ipv6address: ipv6 address obtained from a DHCPv6 server.	
ipif-name: Name of the DHCPv6 client interface.	
Event Description: The ipv6 address from a DHCPv6 server was deleted.	Informational
Log Message: The IPv6 address <ipv6address> on interface <ipif-name> was deleted</ipif-name></ipv6address>	
Parameters Description:	
ipv6address: ipv6 address obtained from a DHCPv6 server.	
ipif-name: Name of the DHCPv6 client interface.	

# DHCPv6 Relay

Log Description	Severity
Event Description: DHCPv6 relay on a specify interface's administrator state changed.	Informational
Log Message: DHCPv6 relay on interface <ipif-name> changed state to [enabled   disabled]</ipif-name>	
Parameters Description:	

Log Description	Severity
<ipif-name>: Name of the DHCPv6 relay agent interface.</ipif-name>	

#### **DNS Resolver**

Log Description	Severity
Event Description: Duplicate Domain name cache added, leads a dynamic domain name cache be deleted.	Informational
Log Message: Duplicate Domain name case name: <domainname>, static IP: <ipaddr>, dynamic IP:<ipaddr></ipaddr></ipaddr></domainname>	
Parameters Description:	
domainname: the domain name string.	
ipaddr: IP address.	

#### **DoS Prevention**

Log Description	Severity
Event Description: Detect DOS attack.	Notice
Log Message: <dos-type> is dropped from (IP: <ip-address> Port <interface- id&gt;)</interface- </ip-address></dos-type>	
Parameters Description:	
dos-type: DOS attack type	
ip-address: IP address.	
interface-id: Interface name	

#### ErrDisable

Log Description	Severity
Event Description: When a port enters the error-disabled state.	Warning
Log Message: Port <interface-id> enters error disable state due to <reason-id></reason-id></interface-id>	
Parameters Description:	
interface-id: The port number.	
reason-id: Loopback Detection, Port Security Violation, Storm Control, BPDU Protect, ARP Rate Limit, DHCP Rate Limit, Digital Diagnostics Monitoring, Scheduled Port-shutdown by Power Saving, Scheduled Hibernation by Power Saving.	
Event Description: When a port leaves the error-disabled state.	Warning
Log Message: Port <interface-id> leaves the error disable state which is previously caused by <reason-id></reason-id></interface-id>	
Parameters Description:	
interface-id: The port number.	
reason-id: Loopback Detection, Port Security Violation, Storm Control, BPDU Protect, ARP Rate Limit, DHCP Rate Limit, Digital Diagnostics Monitoring, Scheduled Port-shutdown by Power Saving, Scheduled Hibernation by Power Saving.	
Event Description: When a port enters the error-disabled state.	Warning
Log Message: Port <interface-id> VLAN <vid> enters error disable state due to <reason-id></reason-id></vid></interface-id>	
Parameters Description:	
interface-id: The port number.	
reason-id: Loopback Detection, Port Security Violation, Storm Control, BPDU Protect, ARP Rate Limit, DHCP Rate Limit, Digital Diagnostics Monitoring, Scheduled Port-shutdown by Power Saving, Scheduled Hibernation by Power Saving.	

Log Description	Severity
vid: The VLAN ID.	
Event Description: When a port leaves the error-disabled state. Log Message: Port <interface-id> VLAN <vid> leaves the error disable state which is previously caused by <reason-id></reason-id></vid></interface-id>	Warning
Parameters Description: interface-id: The port number. reason-id: Loopback Detection, Port Security Violation, Storm Control, BPDU Protect, ARP Rate Limit, DHCP Rate Limit, Digital Diagnostics Monitoring, Scheduled Port-shutdown by Power Saving, Scheduled Hibernation by Power Saving. vid: The VLAN ID.	

#### Interface

Log Description	Severity
Event Description: When port is down.	Informational
Log Message: Port <port-type> <interface-id> link down</interface-id></port-type>	
Parameters Description:	
port-type: port type	
interface-id: Interface name	
Event Description: When port is up.	Informational
Log Message: Port <port-type> <interface-id> link up, <link-speed></link-speed></interface-id></port-type>	
Parameters Description:	
port-type: port type	
interface-id: Interface name	
link-speed: port link speed.	
Event Description: Port is linked on half duplex mode.	Informational
Log Message: ASV: Port < interface-id> Half duplex detected	
Parameters Description:	
interface-id: Interface name	

### JWAC

Log Description	Severity
Event Description: when a host has passed the authentication.	Informational
Log Message: JWAC host login success (Username: <string>, IP: <ipaddr  <br="">ipv6address&gt;, MAC: <mac-address>, <interface-id>, VID: <vlan-id>)</vlan-id></interface-id></mac-address></ipaddr></string>	
Parameters Description:	
Username: The host username.	
IP: The host IP address	
mac-address: The host MAC addresses.	
interface-id: The interface on which the host is authenticated.	
vlan-id: The VLAN ID on which the host exists.	
Event Description: When a host fail to pass the authentication.	Critical
Log Message: JWAC host login fail (Username: <string>, IP: <ipaddr  <br="">ipv6address&gt;, MAC: <mac-address>, <interface-id>, VID: <vlan-id>)</vlan-id></interface-id></mac-address></ipaddr></string>	
Parameters Description:	
Username: The host username.	
IP: The host IP address	
mac-address: The host MAC addresses.	
interface-id: The interface on which the host is authenticated.	

Log Description	Severity
vlan-id: The VLAN ID on which the host exists.	
Event Description: when the authorized user number on the whole device has reached the maximum user limit.	Warning
Log Message: JWAC enters stop learning state	
Event Description: when the authorized user number on the whole device is below the maximum user limit in a time interval.	Warning
Log Message: JWAC recovers from stop learning state	

## LACP

Log Description	Severity
Event Description: Link Aggregation Group link up.	Informational
Log Message: Link Aggregation Group <group_id> link up</group_id>	
Parameters Description:	
group_id: The group id of the link down aggregation group.	
Event Description: Link Aggregation Group link down.	Informational
Log Message: Link Aggregation Group <group_id> link down</group_id>	
Parameters Description:	
group_id: The group id of the link down aggregation group.	
Event Description: Member port attach to Link Aggregation Group.	Informational
Log Message: <ifname> attach to Link Aggregation Group <group_id></group_id></ifname>	
Parameters Description:	
ifname: The interface name of the port that attach to aggregation group.	
group_id: The group id of the aggregation group that port attach to.	
Event Description: Member port detach from Link Aggregation Group.	Informational
Log Message: <ifname> detach from Link Aggregation Group <group_id></group_id></ifname>	
Parameters Description:	
ifname: The interface name of the port that detach from aggregation group.	
group_id: The group id of the aggregation group that port detach from.	

#### LBD

Log Description	Severity
Event Description: Record the event when an interface detect loop. Log Message: <interface-id> LBD loop occurred Parameters Description: interface-id: Interface on which loop is detected.</interface-id>	Critical
Event Description: Record the event when an interface detect loop. Log Message: <interface-id> VLAN <vlan-id> LBD loop occurred Parameters Description: interface-id: Interface on which loop is detected. vlan-id: VLAN on which loop is detected.</vlan-id></interface-id>	Critical
Event Description: Record the event when an interface loop recovered. Log Message: <interface-id> LBD loop recovered Parameters Description: interface-id: Interface on which loop is detected.</interface-id>	Critical
Event Description: Record the event when an interface loop recovered.	Critical

Log Description	Severity
Log Message: <interface-id> VLAN <vlan-id> LBD loop recovered</vlan-id></interface-id>	
Parameters Description:	
interface-id: Interface on which loop is detected.	
vlan-id: VLAN on which loop is detected.	
Event Description: Record the event when the number of VLANs that loop back has occurred exceeds a reserved number.	Critical
Log Message: Loop VLAN numbers overflow	

#### LLDP-MED

Log Description	Severity
Event Description: LLDP-MED topology change detected.	Notice
Log Message: LLDP-MED topology change detected (on port <portnum>. chassis id: <chassistype>, <chassisid>, port id: <porttype>, <portid>, device class: <deviceclass>)</deviceclass></portid></porttype></chassisid></chassistype></portnum>	
Parameters Description:	
portNum: The port number.	
chassisType: chassis ID subtype.	
Value list:	
1. chassisComponent(1)	
2. interfaceAlias(2)	
3. portComponent(3)	
4. macAddress(4)	
5. networkAddress(5)	
6. interfaceName(6)	
7. local(7)	
chassisID: chassis ID.	
portType: port ID subtype.	
Value list:	
1. interfaceAlias(1)	
2. portComponent(2)	
3. macAddress(3)	
4. networkAddress(4)	
5. interfaceName(5)	
6. agentCircuitId(6)	
7. local(7)	
portID: port ID.	
deviceClass: LLDP-MED device type.	
Event Description: Conflict LLDP-MED device type detected.	Notice
Log Message: Conflict LLDP-MED device type detected (on port <portnum>, chassis id: <chassistype>, <chassisid>, port id: <porttype>, <portid>, device class: <deviceclass>)</deviceclass></portid></porttype></chassisid></chassistype></portnum>	
Parameters Description:	
portNum: The port number.	
chassisType: chassis ID subtype.	
Value list:	
1. chassisComponent(1)	
2. interfaceAlias(2)	
3. portComponent(3)	
4. macAddress(4)	
5. networkAddress(5)	

Log Description	Severity
6. interfaceName(6)	
7. local(7)	
chassisID: chassis ID.	
portType: port ID subtype.	
Value list:	
1. interfaceAlias(1)	
2. portComponent(2)	
3. macAddress(3)	
4. networkAddress(4)	
5. interfaceName(5)	
6. agentCircuitId(6)	
7. local(7)	
portID: port ID.	
deviceClass: LLDP-MED device type.	
Event Description: Incompatible LLDP-MED TLV set detected.	Notice
Log Message: Incompatible LLDP-MED TLV set detected (on port <portnum>,</portnum>	
chassis id: <chassistype>, <chassisid>, port id: <porttype>, <portid>, device</portid></porttype></chassisid></chassistype>	
class: <deviceclass>)</deviceclass>	
Parameters Description:	
portNum: The port number.	
chassisType: chassis ID subtype.	
Value list:	
1. chassisComponent(1)	
2. interfaceAlias(2)	
3. portComponent(3)	
4. macAddress(4)	
5. networkAddress(5)	
6. interfaceName(6)	
7. local(7)	
chassisID: chassis ID.	
portType: port ID subtype.	
Value list:	
1. interfaceAlias(1)	
2. portComponent(2)	
3. macAddress(3)	
4. networkAddress(4)	
5. interfaceName(5)	
6. agentCircuitId(6)	
7. local(7)	
portID: port ID.	
deviceClass: LLDP-MED device type.	

# Login/Logout CLI

Log Description	Severity
Event Description: Login through console successfully.	Informational
Log Message: [Unit <unitid>,]Successful login through Console (Username: <username>)</username></unitid>	
Parameters Description:	
unitID: The unit ID.	
username: Represent current login user.	

Log Message: [Unit <unitid>.] Login failed through Console (Username: susernames) Parameters Description: unitID: The unit ID. username: Represent current login user.InformationalEvent Description: Console session timed out (Username: susernames)InformationalParameters Description: unitID: The unit ID. username: Represent current login user.InformationalEvent Description: Logout through console (Username)InformationalEvent Description: Login through console (Username:  username: Represent current login user.InformationalEvent Description: Login through telnet successfully. username: Represent current login user.InformationalEvent Description: Login through telnet successfully. username: Represent current login user.InformationalEvent Description: Login through telnet unsuccessfully. username: Represent current login user. ipaddr: Represent client IP address.WarningEvent Description: Login through telnet unsuccessfully. username: Represent current login user. ipaddr: Represent client IP address.InformationalEvent Description: Telnet session timed out. ipaddr: Represent client IP address.	

## MAC-based Access Control

Log Description	Severity
Event Description: A host has passed the authentication.	Informational
Log Message: MAC-based Access Control host login success (MAC: <mac- address&gt;, <interface-id>, VID: <vlan-id>)</vlan-id></interface-id></mac- 	
Parameters Description:	
mac-address: The host MAC address.	
interface-id: The interface on which the host is authenticated.	
vlan-id: The VLAN ID on which the host exists after it is authenticated.	
Event Description: A host has aged out.	Informational
Log Message: MAC-based Access Control host aged out (MAC: <mac- address&gt;, <interface-id>, VID: <vlan-id>)</vlan-id></interface-id></mac- 	
Parameters Description:	
mac-address: The host MAC address.	
interface-id: The interface on which the host is authenticated.	
vlan-id: The VLAN ID on which the host exists before it is aged out.	
Event Description: A host failed to pass the authentication.	Critical
Log Message: MAC-based Access Control host login fail (MAC: <mac- address&gt;, <interface-id>, VID: <vlan-id>)</vlan-id></interface-id></mac- 	
Parameters Description:	
mac-address: The host MAC address.	
interface-id: The interface on which the host is authenticated.	
vlan-id: The originated VLAN ID on which the host exists.	
Event Description: The authorized user number on the whole device has reached the maximum user limit.	Warning
Log Message: MAC-based Access Control enters stop learning state	
Event Description: The authorized user number on the whole device is below the maximum user limit in a time interval.	Warning
Log Message: MAC-based Access Control recovers from stop learning state	
Event Description: The authorized user number on an interface has reached the maximum user limit.	Warning
Log Message: <interface-id> enters MAC-based Access Control stop learning state</interface-id>	
Parameters Description:	
interface-id: The interface on which the host is authenticated.	

Log Description	Severity
Event Description: The authorized user number on an interface is below the maximum user limit in a time interval.	Warning
Log Message: <interface-id> recovers from MAC-based Access Control stop learning state</interface-id>	
Parameters Description:	
interface-id: The interface on which the host is authenticated.	

## **MSTP Debug Enhancement**

Log Description	Severity
Event Description: Used to record the event that Spanning Tree Protocol is enabled.	Informational
Log Message: Spanning Tree Protocol is enabled	
Event Description: Used to record the event that Spanning Tree Protocol is disabled.	Informational
Log Message: Spanning Tree Protocol is disabled	
Event Description: Used to record MSTP instance topology change event.	Notice
Log Message: Topology changed (Instance : <instance-id>,<interface_id>, MAC:<macaddr>)</macaddr></interface_id></instance-id>	
Parameters Description:	
Instance-id: MST instance id. Instance 0 represents for default instance, CIST.	
interface_id: The port number which detect or receive topology change information.	
macaddr: The system of bridge mac address.	
Event Description: Used to record MSTP instance new root bridge selected. Log Message: [CIST   CIST Regional   MSTI Regional] New Root bridge selected ([Instance: <instance-id>] MAC: <macaddr> Priority :<priority>)</priority></macaddr></instance-id>	Informational
Parameters Description: Instance-id: MST instance id. Instance 0 represents for default instance, CIST.	
macaddr: The system of bridge mac address. priority: The bridge priority value must be divisible by 4096.	
	Notice
Event Description: Used to record MSTP instance new root port selected. Log Message: New root port selected (Instance: <instance-id>, <interface_id>)</interface_id></instance-id>	Notice
Parameters Description:	
Instance-id: MST instance id. Instance 0 represents for default instance, CIST.	
interface_id: The port number which detect or receive topology change information.	
Event Description: Used to record MSTP instance port state change event.	Notice
Log Message: Spanning Tree port status change (Instance : <instance-id>, <interface_id>) <old_status> -&gt; <new_status></new_status></old_status></interface_id></instance-id>	
Parameters Description:	
Instance-id: MST instance id. Instance 0 represents for default instance, CIST.	
interface_id: The port number which detect or receive topology change information.	
old status:	
new status:	
The port of STP state. The value may be Disable, Discarding, Learning, Forwarding	

Log Description	Severity
Event description: Used to record MSTP instance port role change event.	Informational
Log Message: Spanning Tree port role change (Instance : <instance-id>, <interface_id>) <old_role> -&gt; <new_role></new_role></old_role></interface_id></instance-id>	
Parameters description:	
Instance-id: MST instance id. Instance 0 represents for default instance, CIST.	
Interface_id: The port number which detect or receive topochange information.	
old role:	
new role :	
The port role of stp. The value may be DisabledPort, AlternatePort, BackupPort, RootPort, DesignatedPort, MasterPort.	
Event Description: Use to record action to create an MST instance.	Informational
Log Message: Spanning Tree instance created (Instance : <instance-id>)</instance-id>	
Parameters Description:	
Instance-id: MST instance id. Instance 0 represents for default instance, CIST.	
Event Description: Use to record action to delete an MST instance.	Informational
Log Message: Spanning Tree instance deleted (Instance : <instance-id>) Parameters Description:</instance-id>	
Instance-id: MST instance id. Instance 0 represents for default instance, CIST.	
Event Description: Use to record action to change the STP version.	Informational
Log Message: Spanning Tree version change (new version : <new_version>)</new_version>	
Parameters Description:	
new_version: Running under which version of STP.	
Event Description: Used to record the configuration name and revision level changed in the MST Configuration Identification.	Informational
Log Message: Spanning Tree MST configuration ID name and revision level change (name: <name>, revision level <revision_level>)</revision_level></name>	
Parameters Description:	
name: The name given for a specified MST region.	
revision_level: Switches using the same given name but with a different revision level are considered members of different MST regions.	
Event Description: Use to record action to maps a VLAN(s) to an MST instance.	Informational
Log Message: Spanning Tree MST configuration ID VLAN mapping table change (instance: <instance-id> add vlan <startvlanid> [- <endvlanid>])</endvlanid></startvlanid></instance-id>	
Parameters Description:	
Instance-id: MST instance id. Instance 0 represents for default instance, CIST.	
startvlanid: The start vid of add vlan range.	
endvlanid: The end vid of add vlan range.	
Event Description: Use to record action to delete a VLAN(s) from an MST instance.	Informational
Log Message: Spanning Tree MST configuration ID VLAN mapping table change (instance: <instance-id> delete vlan <startvlanid> [- <endvlanid>])</endvlanid></startvlanid></instance-id>	
Parameters Description:	
Instance-id: MST instance id. Instance 0 represents for default instance, CIST.	
startvlanid: The start vid of delete vlan range.	

Log Description	Severity
endvlanid: The end vid of delete vlan range.	
Event Description: Used to record the event that port role change to alternate due to guard root.	Informational
Log Message: Spanning Tree port role change (Instance : <instance-id>, <interface-id>) to alternate port due to the guard root</interface-id></instance-id>	
Parameters Description:	
Instance-id: MST instance id. Instance 0 represents for default instance, CIST.	
Interface_id: The port number which detect the event.	

# Peripheral

Log Description	Severity
Event Description: Fan Recovered.	Critical
Log Message: Unit <id>, <fan-descr> back to normal</fan-descr></id>	
Parameters Description:	
Unit <id>: The unit ID.</id>	
fan-descr: The FAN ID and position.	
Event Description: Fan Fail.	Critical
Log Message: Unit <id> <fan-descr> failed</fan-descr></id>	
Parameters Description:	
Unit <id>: The unit ID.</id>	
fan-descr: The FAN ID and position.	
Event Description: Temperature sensor enters alarm state.	Critical
Log Message: Unit <unit-id> <thermal-sensor-descr> detects abnormal temperature <degree></degree></thermal-sensor-descr></unit-id>	
Parameters Description:	
unitID: The unit ID.	
thermal-sensor-descr: The sensor ID and position.	
degree: The current temperature.	
Event Description: Temperature recovers to normal.	Critical
Log Message: Unit <unit-id> <thermal-sensor-descr> temperature back to normal</thermal-sensor-descr></unit-id>	
Parameters Description:	
unitID: The unit ID.	
thermal-sensor-descr: The sensor ID and position.	
Event Description: Power failed.	Critical
Log Message: Unit <unit-id> <power-descr> failed</power-descr></unit-id>	
Parameters Description:	
unitID: The unit ID.	
power-descr: The power position and ID.	
Event Description: Power is recovered.	Critical
Log Message: Unit <unit-id> <power-descr> back to normal</power-descr></unit-id>	
Parameters Description:	
unitID: The unit ID.	
power-descr: The power position and ID.	
Event Description: Press the factory reset button.	Critical
Log Message: Unit <unit-id> factory reset button pressed</unit-id>	
Parameters Description:	
unitID: The unit ID.	

ΡοΕ

Log Description	Severity
Event Description: Total power usage threshold is exceeded Log Message: Unit <unit-id> usage threshold <percentage> is exceeded Parameters Description: unit-id: The box ID. percentage: The usage threshold.</percentage></unit-id>	Warning
Event Description: Total power usage threshold is recovered. Log Message: Unit <unit-id> usage threshold <percentage> is recovered Parameters Description: unit-id: The box ID. percentage: The usage threshold.</percentage></unit-id>	Warning
Event Description: PD doesn't reply the ping request. Log Message: PD alive check failed. (Port: <portnum>, PD: <ipaddr>) Parameters Description: portNum: The port number. ipaddr: The IP (IPv4/IPv6) address of PD.</ipaddr></portnum>	Warning
Event Description: Power removal due to absence of Maintain Power Signature (MPS). Log Message: ASV: Port <port-type><interface-id> PoE MPS Absent Parameters Description: port-type: The port type. interface-id: The interface name.</interface-id></port-type>	Warning
Event Description: Short circuit condition detected. Log Message: ASV: Port <port-type><interface-id> PoE PD short Parameters Description: port-type: The port type. interface-id: The interface name.</interface-id></port-type>	Warning
Event Description: Overload condition detected. Log Message: ASV: Port <port-type><interface-id> PoE Overload Parameters Description: port-type: The port type. interface-id: The interface name.</interface-id></port-type>	Warning
Event Description: Power has been denied or removed due to fault. Log Message: ASV: Port <port-type><interface-id> PoE Power Denied Parameters Description: port-type: The port type. interface-id: The interface name.</interface-id></port-type>	Warning
Event Description: Power has been denied or removed due to overheat. Log Message: ASV: Port <port-type><interface-id> PoE Thermal Shutdown Parameters Description: port-type: The port type. interface-id: The interface name.</interface-id></port-type>	Warning
Event Description: PoE startup failure on port. Log Message: ASV: Port <port-type><interface-id> PoE Startup Failure Parameters Description: port-type: The port type. interface-id: The interface name.</interface-id></port-type>	Warning
Event Description: Cannot classify PD.	Warning

Log Description	Severity
Log Message: ASV: Port <port-type><interface-id> PoE Classification Failure</interface-id></port-type>	
Parameters Description:	
port-type: The port type.	
interface-id: The interface name.	

# Port Security

Log Description	Severity
Event Description: Address full on a port.	Warning
Log Message: MAC address <macaddr> causes port security violation on <interface-id></interface-id></macaddr>	
Parameters Description:	
macaddr: The violation MAC address.	
interface-id: The interface name.	
Event Description: Address full on system.	Warning
Log Message: Limit on system entry number has been exceeded	

# Safeguard

Log Description	Severity
Event Description: the host enters the mode of exhausted.	Warning
Log Message: Unit <unit-id>, Safeguard Engine enters EXHAUSTED mode</unit-id>	
Parameters Description:	
unit-id: The Unit ID	
Event Description: the host enters the mode of normal.	Informational
Log Message: Unit <unit-id>, Safeguard Engine enters NORMAL mode</unit-id>	
Parameters Description:	
unit-id: The Unit ID	

#### SNMP

Log Description	Severity
Event Description: SNMP request received with invalid community string. Log Message: SNMP request received from <ipaddr> with invalid community string</ipaddr>	Informational
Parameters Description:	
ipaddr: The IP address.	

#### SSH

Log Description	Severity
Event Description: SSH server is enabled. Log Message: SSH server is enabled	Informational
Event Description: SSH server is disabled. Log Message: SSH server is disabled	Informational

## Stacking

Log Description	Severity
Event Description: Hot insertion.	Informational

Log Description	Severity
Log Message: Unit: <unitid>, MAC: <macaddr> Hot insertion</macaddr></unitid>	
Parameters Description:	
unitID: Box ID.	
Macaddr: MAC address.	
Event Description: Hot removal.	Informational
Log Message: Unit: <unitid>, MAC: <macaddr> Hot removal</macaddr></unitid>	
Parameters Description:	
unitID: Box ID.	
Macaddr: MAC address.	
Event Description: Stacking topology change.	Informational
Log Message: Stacking topology is <stack_tp_type>. Master(Unit <unitid>,</unitid></stack_tp_type>	
MAC: <macaddr>)</macaddr>	
Parameters Description:	
Stack_TP_TYPE: The stacking topology type is one of the following:	
1. Ring,	
2. Chain.	
unitID: Box ID.	
Macaddr: MAC address.	
Event Description: Backup master changed to master.	Informational
Log Message: Backup master changed to master. Master (Unit: <unitid>)</unitid>	
Parameters Description:	
unitID: Box ID.	
Event Description: Slave changed to master.	Informational
Log Message: Slave changed to master. Master (Unit: <unitid>)</unitid>	
Parameters Description:	
unitID: Box ID.	
Event Description: Box ID conflict.	Critical
Log Message: Hot insert failed, box ID conflict: Unit <unitid> conflict (MAC:</unitid>	
<pre><macaddr> and MAC: <macaddr>)</macaddr></macaddr></pre>	
Parameters Description:	
unitID: Box ID.	
macaddr: The MAC addresses of the conflicting boxes.	
Event Description: Stacking port linkup. A Stacking port will act as a SIO	Critical
interface or a member of a SIO interface (SIO Trunk). This log entry is only	Childan
available on projects that stacking port has got a port number indicator on	
device's panel.	
Log Message: Stacking port <port> link up</port>	
Parameters Description:	
port: Represents the logical port number of a Stacking port.	
Event Description: Stacking port link down. A Stacking port will act as a SIO	Critical
interface or a member of a SIO interface (SIO Trunk). This log entry is only	
available on projects that stacking port has got a port number indicator on device's panel.	
Log Message: Stacking port <port> link down</port>	
Parameters Description:	
port: Represents the logical port number of a Stacking port.	
Event Description: SIO interface linkup. For SIO Trunk, the first member port link up will trigger this event.	Critical
Log Message: SIO interface Unit <unitid> <sion> link up</sion></unitid>	
Parameters Description:	
unitID: Box ID.	

Log Description	Severity
SIOn: Represents the SIO interface number. Current Supported SIO interface number should be SIO1 and SIO2.	
Event Description: SIO interface link down. For SIO Trunk, the last member port link down will trigger this event.	Critical
Log Message: SIO interface Unit <unitid> <sion> link down</sion></unitid>	
Parameters Description:	
unitID: Box ID.	
SIOn: Represents the SIO interface number. Current Supported SIO interface number should be SIO1 and SIO2.	

### Storm Control

Log Description	Severity
Event Description: Storm occurrence.	Warning
Log Message: <broadcast multicast="" unicast=""  =""> storm is occurring on <interface-id></interface-id></broadcast>	
Parameters Description:	
Broadcast: Storm is resulted by broadcast packets(DA = FF:FF:FF:FF:FF:FF).	
Multicast: Storm is resulted by multicast packets, including unknown L2 multicast, known L2 multicast, unknown IP multicast and known IP multicast.	
Unicast: Storm is resulted by unicast packets, including both known and unknown unicast packets	
interface-id: The interface ID on which a storm is occurring.	
Event Description: Storm cleared.	Informational
Log Message: <broadcast multicast="" unicast=""  =""> storm is cleared on <interface-id></interface-id></broadcast>	
Parameters Description:	
Broadcast: Broadcast storm is cleared.	
Multicast: Multicast storm is cleared.	
Unicast: Unicast storm (including both known and unknown unicast packets) is cleared.	
interface-id: The interface ID on which a storm is cleared.	
Event Description: Port shut down due to a packet storm.	Warning
Log Message: <interface-id> is currently shut down due to the <broadcast  <br="">Multicast   Unicast&gt; storm</broadcast></interface-id>	
Parameters Description:	
interface-id: The interface ID on which is error-disabled by storm.	
Broadcast: The interface is disabled by broadcast storm.	
Multicast: The interface is disabled by multicast storm.	
Unicast: The interface is disabled by unicast storm (including both known and unknown unicast packets).	

## System Log Summary

Log Description	Severity
Event Description: This log will be generated when system warm start. Log Message: [Unit <unitid>, ]System warm start Parameters Description: unitID: The unit ID.</unitid>	Critical
Event Description: This log will be generated when system cold start.	Critical

Log Description	Severity
Log Message: [Unit <unitid>, ]System cold start</unitid>	
Parameters Description:	
unitID: The unit ID.	
Event Description: This log will be generated when system start up.	
Log Message: [Unit <unitid>, ]System started up.</unitid>	Oritical
Parameters Description:	Critical
unitID: The unit ID.	

### Telnet

Log Description	Severity
Event Description: Successful login through Telnet.	Informational
Log Message: Successful login through Telnet (Username: <username>, IP: <ipaddr>)</ipaddr></username>	
Parameters Description:	
ipaddr: The IP address of telnet client.	
username: the user name that used to login telnet server.	
Event Description: Login failed through Telnet.	Warning
Log Message: Login failed through Telnet (Username: <username>, IP: <ipaddr>)</ipaddr></username>	
Parameters Description:	
ipaddr: The IP address of telnet client.	
username: the user name that used to login telnet server.	
Event Description: Logout through Telnet.	Informational
Log Message: Logout through Telnet (Username: <username>, IP: <ipaddr>)</ipaddr></username>	
Parameters Description:	
ipaddr: The IP address of telnet client.	
username: the user name that used to login telnet server.	
Event Description: Telnet session timed out.	Informational
Log Message: Telnet session timed out (Username: <username>, IP: <ipaddr>)</ipaddr></username>	
Parameters Description:	
ipaddr: The IP address of telnet client.	
username: the user name that used to login telnet server.	

#### Voice-VLAN

Log Description	Severity
Event Description: When a new voice device is detected on an interface.	Informational
Log Message: New voice device detected ( <interface-id>, MAC: <mac- address&gt;)</mac- </interface-id>	
Parameters Description:	
interface-id: Interface name.	
mac-address: Voice device MAC address	
Event Description: When an interface which is in auto voice VLAN mode joins the voice VLAN.	Informational
Log Message: <interface-id> add into voice VLAN <vid></vid></interface-id>	
Parameters Description:	
interface-id: Interface name.	
vid: VLAN ID	

Log Description	Severity
Event Description: When an interface leaves the voice VLAN and at the same time, no voice device is detected in the aging interval for that interface, the log message will be sent.	Informational
Log Message: <interface-id> remove from voice VLAN <vid></vid></interface-id>	
Parameters Description:	
interface-id: Interface name.	
vid: VLAN ID	

#### Web

Log Description	Severity
Event Description: Successful login through Web.	Informational
Log Message: Successful login through Web (Username: <username>, IP: <ipaddr>)</ipaddr></username>	
Parameters Description:	
username: The use name that used to login HTTP server.	
ipaddr: The IP address of HTTP client.	
Event Description: Login failed through Web.	Warning
Log Message: Login failed through Web (Username: <username>, IP: <ipaddr>)</ipaddr></username>	
Parameters Description:	
username: The use name that used to login HTTP server.	
ipaddr: The IP address of HTTP client.	
Event Description: Web session timed out.	Informational
Log Message: Web session timed out (Username: <username>, IP: <ipaddr>)</ipaddr></username>	
Parameters Description:	
username: The use name that used to login HTTP server.	
ipaddr: The IP address of HTTP client.	
Event Description: Logout through Web.	Informational
Log Message: Logout through Web (Username: <username>, IP: <ipaddr>)</ipaddr></username>	
Parameters Description:	
username: The use name that used to login HTTP server.	
ipaddr: The IP address of HTTP client.	
Event Description: Successful login through Web (SSL).	Informational
Log Message: Successful login through Web (SSL) (Username: <username>, IP: <ipaddr>)</ipaddr></username>	
Parameters Description:	
username: The use name that used to login SSL server.	
ipaddr: The IP address of SSL client.	
Event Description: Login failed through Web (SSL).	Warning
Log Message: Login failed through Web (SSL) (Username: <username>, IP: <ipaddr>)</ipaddr></username>	
Parameters Description:	
username: The use name that used to login SSL server.	
ipaddr: The IP address of SSL client.	
Event Description: Web (SSL) session timed out.	Informational
Log Message: Web (SSL) session timed out (Username: <username>, IP: <ipaddr>)</ipaddr></username>	
Parameters Description:	
username: The use name that used to login SSL server.	

Log Description	Severity
ipaddr: The IP address of SSL client.	
Event Description: Logout through Web(SSL). Log Message: Logout through Web(SSL) (Username: <username>, IP: <ipaddr>)</ipaddr></username>	Informational
Parameters Description: username: The use name that used to login SSL server. ipaddr: The IP address of SSL client.	

#### Web-Authentication

Log Description	Severity
Event Description: When a host has passed the authentication.	Informational
Log Message: Web-Authentication host login success (Username: <string>, IP: <ipaddr ipv6address=""  ="">, MAC: <mac-address>, <interface-id>, VID: <vlan- id&gt;)</vlan- </interface-id></mac-address></ipaddr></string>	
Parameters Description:	
Username: The host username.	
IP: The host IP address	
mac-address: The host MAC addresses.	
interface-id: The interface on which the host is authenticated.	
vlan-id: The VLAN ID on which the host exists.	
Event Description: When a host fail to pass the authentication.	Critical
Log Message: Web-Authentication host login fail (Username: <string>, IP: <ipaddr ipv6address=""  ="">, MAC: <mac-address>, <interface-id>, VID: <vlan-id>)</vlan-id></interface-id></mac-address></ipaddr></string>	
Parameters Description:	
Username: The host username.	
IP: The host IP address	
mac-address: The host MAC addresses.	
interface-id: The interface on which the host is authenticated.	
vlan-id: The VLAN ID on which the host exists.	
Event Description: when the authorized user number on the whole device has reached the maximum user limit.	Warning
Log Message: Web-Authentication enters stop learning state	
Event Description: when the authorized user number on the whole device is below the maximum user limit in a time interval.	Warning
Log Message: Web-Authentication recovers from stop learning state	

# **Appendix B - Trap Entries**

The following tables list the trap log entries and their corresponding meanings that will appear in the switch.

#### 802.1X

Trap Name	Description	OID
dDot1xExtLoggedSuccess	The trap is sent when a host has successfully logged in (passed 802.1X authentication). Binding objects: (1) ifIndex (2) dnaSessionClientMacAddress (3) dnaSessionAuthVlan (4) dnaSessionAuthUserName	1.3.6.1.4.1.171 .14.30.0.1
dDot1xExtLoggedFail	The trap is sent when a host failed to pass 802.1X authentication (login failed).         Binding objects:         (1) ifIndex         (2) dnaSessionClientMacAddress         (3) dnaSessionAuthVlan         (4) dnaSessionAuthUserName         (5) dDot1xExtNotifyFailReason	1.3.6.1.4.1.171 .14.30.0.2

#### **Authentication Fail**

Trap Name	Description	OID
authenticationFailure	An authenticationFailure trap signifies that the SNMPv2 entity, acting in an agent role, has received a protocol message that is not properly authenticated. While all implementations of the SNMPv2 must be capable of generating this trap, the snmpEnableAuthenTraps object indicates whether this trap will be generated.	1.3.6.1.6.3.1.1. 5.5

#### **BPDU Attack Protection**

Trap Name	Description	OID
dBpduProtectionAttackOccur	This trap is sent when the BPDU attack happened on an interface.	1.3.6.1.4.1.171 .14.47.0.1
	Binding objects:	
	(1) ifIndex	
	(2) dBpduProtectionIfCfgMode	
dBpduProtectionAttackRecover	This trap is sent when the BPDU attack recovered on an interface.	1.3.6.1.4.1.171 .14.47.0.2
	Binding objects:	
	(1) ifIndex	

#### DDM

Trap Name	Description	OID
	······································	1.3.6.1.4.1.171 .14.72.0.1

Trap Name	Description	OID
	situation to normal status. Only when the current value> low warning or current value <high recover="" send="" td="" trap.<="" warning="" will=""><td></td></high>	
	Binding objects:	
	(1) dDdmNotifyInfolfIndex	
	(2) dDdmNotifyInfoComponent	
	(3) dDdmNotifyInfoAbnormalLevel	
	(4) dDdmNotifyInfoThresholdExceedOrRecover	
dDdmWarningTrap	A notification is generated when an abnormal warning situation occurs, or recovers from an abnormal warning situation to normal status.	1.3.6.1.4.1.171 .14.72.0.2
	Binding objects:	
	(1) dDdmNotifyInfolfIndex	
	(2) dDdmNotifyInfoComponent	
	(3) dDdmNotifyInfoAbnormalLevel	
	(4) dDdmNotifyInfoThresholdExceedOrRecover	

## **DHCP Server Screen Prevention**

Trap Name	Description	OID
dDhcpFilterAttackDetected	When DHCP Server Screen is enabled, if the switch received the forge DHCP Server packet, the switch will trap the event if any attacking packet is received.	1.3.6.1.4.1.171 .14.133.0.1
	Binding objects:	
	(1) dDhcpFilterLogBufServerlpAddr	
	(2) dDhcpFilterLogBufClientMacAddr	
	(3) dDhcpFilterLogBufferVlanId	
	(4) dDhcpFilterLogBufferOccurTime	

### **DoS Prevention**

Trap Name	Description	OID
dDosPreveAttackDetectedPacket	The trap is sent when detect DoS attack. Binding objects:	1.3.6.1.4.1.171 .14.59.0.2
	(1) dDoSPrevCtrlAttackType	
	<ul><li>(2) dDosPrevNotiInfoDropIpAddr</li><li>(3) dDosPrevNotiInfoDropPortNumber</li></ul>	

### ErrDisable

Trap Name	Description	OID
dErrDisNotifyPortDisabledAssert	The trap is sent when a port enters into error disabled state. Binding objects:	1.3.6.1.4.1.171 .14.45.0.1
	<ul><li>(1) dErrDisNotifyInfoPortIfIndex</li><li>(2) dErrDisNotifyInfoReasonID</li></ul>	
dErrDisNotifyPortDisabledClear	The trap is sent when a port loop restarts after the interval time. Binding objects:	1.3.6.1.4.1.171 .14.45.0.2
	(1) dErrDisNotifyInfoPortIfIndex (2) dErrDisNotifyInfoReasonID	

#### **General Management**

Trap Name	Description	OID
dGenMgmtLoginFail	This trap is sent when the user login failed to the switch.	1.3.6.1.4.1.171 .14.165.0.1
	Binding objects:	
	(1) dGenMgmtNotifyInfoLoginType	
	(2) dGenMgmtNotifyInfoUserName	

#### **Gratuitous ARP Function**

Trap Name	Description	OID
agentGratuitousARPTrap	The trap is sent when IP address conflicted. Binding objects: (1) ipaddr (2) macaddr (3) portNumber (4) agentGratuitousARPInterfaceName	1.3.6.1.4.1.171 .14.75.0.1

#### IMPB

Trap Name	Description	OID
dImpbViolationTrap	The address violation notification is generated when IP-MAC-Port Binding address violation is detected.	1.3.6.1.4.1.171 .14.22.0.1
	Binding objects:	
	(1) ifIndex	
	(2) dImpbViolationIpAddrType	
	(3) dImpbViolationIpAddress	
	(4) dImpbViolationMacAddress	

#### LACP

Trap Name	Description	OID
linkUp	A linkUp trap signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links left the down state and transitioned into some other state (but not into the notPresent state). This other state is indicated by the included value of ifOperStatus. Binding objects: (1) ifIndex (2) if AdminStatus (3) ifOperStatu	1.3.6.1.6.3.1.1. 5.4
linkDown	A linkDown trap signifies that the SNMP entity, acting in an agent role, has detected that the ifOperStatus object for one of its communication links is about to enter the down state from some other state (but not from the notPresent state). This other state is indicated by the included value of ifOperStatus. Binding objects: (1) ifIndex (2) if AdminStatus (3) ifOperStatu	1.3.6.1.6.3.1.1. 5.3

Trap Name	Description	OID
dLbdLoopOccurred	This trap is sent when an interface loop occurs. Binding objects: (1) dLbdNotifyInfolfIndex	1.3.6.1.4.1.171 .14.46.0.1
dLbdLoopRestart	This trap is sent when an interface loop restarts after the interval time. Binding objects: (1) dLbdNotifyInfolfIndex	1.3.6.1.4.1.171 .14.46.0.2
dLbdVlanLoopOccurred	This trap is sent when an interface with a VID loop occurs. Binding objects: (1) dLbdNotifyInfolfIndex (2) dLbdNotifyInfoVlanId	1.3.6.1.4.1.171 .14.46.0.3
dLbdVlanLoopRestart	This trap is sent when an interface loop with a VID restarts after the interval time. Binding objects: (1) dLbdNotifyInfoIfIndex (2) dLbdNotifyInfoVlanId	1.3.6.1.4.1.171 .14.46.0.4

#### LLDP

Trap Name	Description	OID
IldpRemTablesChange	An IldpRemTablesChange notification is sent when the value of IldpStatsRemTableLastChangeTime changes. It can be utilized by an NMS to trigger LLDP remote systems table maintenance polls. Binding objects: (1) IldpStatsRemTablesInserts (2) IldpStatsRemTablesDeletes (3) IldpStatsRemTablesDrops (4) IldpStatsRemTablesAgeouts	1.0.8802.1.1.2. 0.0.1
IldpXMedTopologyChangeDetecte d	A notification generated by the local device sensing a change in the topology that indicates that a new remote device attached to a local port, or a remote device disconnected or moved from one port to another. Binding objects: (1) IldpRemChassisIdSubtype (2) IldpRemChassisId (3) IldpXMedRemDeviceClass	1.0.8802.1.1.2. 1.5.4795.0.1

## **MAC-based Access Control**

Trap Name	Description	OID
dMacAuthLoggedSuccess	The trap is sent when a MAC-based Access Control host is successfully logged in.	1.3.6.1.4.1.171 .14.153.0.1
	Binding objects:	
	(1) ifIndex	
	(2) dnaSessionClientMacAddress	
	(3) dnaSessionAuthVlan	

Trap Name	Description	OID
dMacAuthLoggedFail	The trap is sent when a MAC-based Access Control host login fails.	1.3.6.1.4.1.171 .14.153.0.2
	Binding objects:	
	(1) ifIndex	
	(2) dnaSessionClientMacAddress	
	(3) dnaSessionAuthVlan	
dMacAuthLoggedAgesOut	The trap is sent when a MAC-based Access Control host ages out.	1.3.6.1.4.1.171 .14.153.0.3
	Binding objects:	
	(1) ifIndex	
	(2) dnaSessionClientMacAddress	
	(3) dnaSessionAuthVlan	

## **MAC-notification**

Trap Name	Description	OID
dL2FdbMacNotification	This trap indicates the MAC addresses variation in the address table.	1.3.6.1.4.1.171 .14.3.0.1
	Binding objects:	
	(1) dL2FdbMacChangeNotifyInfo	

#### **MSTP**

Trap Name	Description	OID
newRoot	The newRoot trap indicates that the sending agent has become the new root of the Spanning Tree; the trap is sent by a bridge soon after its election as the new root, e.g., upon expiration of the Topology Change Timer, immediately subsequent to its election. Implementation of this trap is optional.	1.3.6.1.2.1.17. 0.1
topologyChange	A topologyChange trap is sent by a bridge when any of its configured ports transitions from the Learning state to the Forwarding state, or from the Forwarding state to the Blocking state. The trap is not sent if a newRoot trap is sent for the same transition. Implementation of this trap is optional.	1.3.6.1.2.1.17. 0.2

## Peripheral

Trap Name	Description	OID
dEntityExtPowerStatusChg	Power Status change notification. Binding objects: (1) dEntityExtEnvPowerUnitId (2) dEntityExtEnvPowerIndex (3) dEntityExtEnvPowerStatus	1.3.6.1.4.1.171 .14.5.0.3
dEntityExtFanStatusChg	Fan status change notification. Binding objects: (1) dEntityExtEnvFanUnitId (2) dEntityExtEnvFanIndex (3) dEntityExtEnvFanStatus	1.3.6.1.4.1.171 .14.5.0.1
dEntityExtThermalStatusChg	Temperature status change notification. Binding objects:	1.3.6.1.4.1.171 .14.5.0.2

Trap Name	Description	OID
	(1) dEntityExtEnvTempUnitId	
	(2) dEntityExtEnvTempIndex	
	(3) dEntityExtEnvTempStatus	
dEntityExtFactoryResetButton	Press factory reset button notification.	1.3.6.1.4.1.171
	Binding objects:	.14.5.0.5
	(1) dEntityExtUnitIndex	

#### ΡοΕ

Trap Name	Description	OID
pethMainPowerUsageOnNotificati on	This trap indicates PSE Threshold usage indication is on, the usage power is above the threshold. At least 500 msec must elapse between notifications being emitted by the same object instance. Binding objects: (1) pethMainPseConsumptionPower	1.3.6.1.2.1.105 .0.2
pethMainPowerUsageOffNotificati on	This trap indicates PSE Threshold usage indication is off, the usage power is below the threshold. At least 500 msec must elapse between notifications being emitted by the same object instance.	1.3.6.1.2.1.105 .0.3
	Binding objects:	
	(1) pethMainPseConsumptionPower	
dPoelfPowerDeniedNotification	This Notification indicates if PSE state diagram enters the state POWER_DENIED. At least 500 msec must elapse between notifications being emitted by the same object instance.	1.3.6.1.4.1.171 .14.24.0.1
	Binding objects:	
	(1) pethPsePortPowerDeniedCounter	
dPoelfPowerOverLoadNotification	This trap indicates if PSE state diagram enters the state ERROR_DELAY_OVER. At least 500 msec must elapse between notifications being emitted by the same object instance.	1.3.6.1.4.1.171 .14.24.0.2
	Binding objects:	
	(1) pethPsePortOverLoadCounter	
dPoelfPowerShortCircuitNotificati on	This trap indicates if PSE state diagram enters the state ERROR_DELAY_SHORT. At least 500 msec must elapse between notifications being emitted by the same object instance.	1.3.6.1.4.1.171 .14.24.0.3
	Binding objects:	
	(1) pethPsePortShortCounter	
dPoelfPdAliveFailOccurNotificatio n	This trap indicates if the PD device has the stop working or no response problem.	1.3.6.1.4.1.171 .14.24.0.4
	At least 500 msec must elapse between notifications being emitted by the same object instance.	
	Binding objects:	
	(1) pethMainPseGroupIndex	
	(2) pethPsePortIndex	
	(3) dPoelfPdAliveCfgPdIpType	
	(4) dPoelfPdAliveCfgPdIpAddr	

Port

Trap Name	Description	OID
linkUp	A notification is generated when port linkup.	1.3.6.1.6.3.1.1.
	Binding objects:	5.4
	(1) ifIndex	
	(2) if AdminStatus	
	(3) ifOperStatus	
linkDown	A notification is generated when port linkdown.	1.3.6.1.6.3.1.1.
	Binding objects:	5.3
	(1) ifIndex	
	(2) if AdminStatus	
	(3) ifOperStatus	

## **Port Security**

Trap Name	Description	OID
dPortSecMacAddrViolation	When the port security trap is enabled, new MAC addresses that violate the pre-defined port security configuration will trigger trap messages to be sent out.	1.3.6.1.4.1.171 .14.8.0.1
	Binding objects:	
	(1) ifIndex	
	(2) dPortSecIfCurrentStatus	
	(3) dPortSeclfViolationMacAddress	

#### RMON

Trap Name	Description	OID
risingAlarm	The SNMP trap that is generated when an alarm entry crosses its rising threshold and generates an event that is configured for sending SNMP traps. Binding objects: (1) alarmIndex (2) alarmVariable (3) alarmSampleType (4) alarmValue (5) alarmRisingThreshold	1.3.6.1.2.1.16. 0.1
fallingAlarm	The SNMP trap that is generated when an alarm entry crosses its falling threshold and generates an event that is configured for sending SNMP traps. Binding objects: (1) alarmIndex (2) alarmVariable (3) alarmSampleType (4) alarmValue (5) alarmFallingThreshold	1.3.6.1.2.1.16. 0.2

# Safeguard

Trap Name	Description	OID
dSafeguardChgToExhausted	This trap indicates System change operation mode from normal to exhaust. Binding objects:	1.3.6.1.4.1.171 .14.19.1.1.0.1

Trap Name	Description	OID
	(1) dSafeguardEngineCurrentMode	
dSafeguardChgToNormal	This trap indicates system change operation mode from exhausted to normal.	1.3.6.1.4.1.171 .14.19.1.1.0.2
	Binding objects:	
	(1) dSafeguardEngineCurrentMode	

#### Stack

Trap Name	Description	OID
dStackInsertNotification	Unit Hot Insert notification. Binding objects: (1) dStackNotifyInfoBoxId (2) dStackInfoMacAddr	1.3.6.1.4.1.171 .14.9.0.1
dStackRemoveNotification	Unit Hot Remove notification. Binding objects: (1) dStackNotifyInfoBoxId (2) dStackInfoMacAddr	1.3.6.1.4.1.171 .14.9.0.2
dStackFailureNotification	Unit Failure notification. Binding objects: (1) dStackNotifyInfoBoxId	1.3.6.1.4.1.171 .14.9.0.3
dStackTPChangeNotification	The stacking topology change notification. Binding objects: (1) dStackNotifyInfoTopologyType (2) dStackNotifyInfoBoxId (3) dStackInfoMacAddr	1.3.6.1.4.1.171 .14.9.0.4
dStackRoleChangeNotification	The stacking unit role change notification. Binding objects: (1) dStackNotifyInfoRoleChangeType (2) dStackNotifyInfoBoxId	1.3.6.1.4.1.171 .14.9.0.5

#### SIM

Trap Name	Description	OID
swSingleIPMSColdStart	The commander switch will send this notification when its member generates a cold start notification. Binding objects: (1) swSingleIPMSID (2) swSingleIPMSMacAddr	1.3.6.1.4.1.171 .12.8.6.0.11
swSingleIPMSWarmStart	The commander switch will send this notification when its member generates a warm start notification. Binding objects: (1) swSingleIPMSID (2) swSingleIPMSMacAddr	1.3.6.1.4.1.171 .12.8.6.0.12
swSingleIPMSLinkDown	The commander switch will send this notification when its member generates a link down notification. Binding objects: (1) swSingleIPMSID (2) swSingleIPMSMacAddr (3) ifIndex	1.3.6.1.4.1.171 .12.8.6.0.13

Trap Name	Description	OID
swSingleIPMSLinkUp	The commander switch will send this notification when its member generates a link up notification. Binding objects: (1) swSingleIPMSID (2) swSingleIPMSMacAddr (3) ifIndex	1.3.6.1.4.1.171 .12.8.6.0.14
swSingleIPMSAuthFail	The commander switch will send this notification when its member generates an authentication failure notification. Binding objects: (1) swSingleIPMSID (2) swSingleIPMSMacAddr	1.3.6.1.4.1.171 .12.8.6.0.15
swSingleIPMSnewRoot	The commander switch will send this notification when its member generates a new root notification. Binding objects: (1) swSingleIPMSID (2) swSingleIPMSMacAddr	1.3.6.1.4.1.171 .12.8.6.0.16
swSingleIPMSTopologyChange	The commander switch will send this notification when its member generates a topology change notification. Binding objects: (1) swSingleIPMSID (2) swSingleIPMSMacAddr	1.3.6.1.4.1.171 .12.8.6.0.17

## Start

Trap Name	Description	OID
coldStart	A coldStart trap signifies that the SNMPv2 entity, acting in an agent role, is reinitializing itself and that its configuration may have been altered.	1.3.6.1.6.3.1.1. 5.1
warmStart	1 5	1.3.6.1.6.3.1.1. 5.2

#### **Storm Control**

Trap Name	Description	OID
dStormCtrlOccurred	This trap is sent when dStormCtrlNotifyEnable is 'stormOccurred' or 'both' and a storm is detected. Binding objects: (1) ifIndex (2) dStormCtrlNotifyTrafficType	1.3.6.1.4.1.171 .14.25.0.1
dStormCtrlStormCleared	This trap is sent when dStormCtrlNotifyEnable is 'stormCleared' or 'both' and a storm is cleared. Binding objects: (1) ifIndex (2) dStormCtrlNotifyTrafficType	1.3.6.1.4.1.171 .14.25.0.2

#### System File

Trap Name	Description	OID
dsfUploadImage	The notification is sent when the user uploads image file successfully.	1.3.6.1.4.1.171 .14.14.0.1
dsfDownloadImage	The notification is sent when the user downloads image file successfully.	1.3.6.1.4.1.171 .14.14.0.2
dsfUploadCfg	The notification is sent when the user uploads configuration file successfully.	1.3.6.1.4.1.171 .14.14.0.3
dsfDownloadCfg	The notification is sent when the user downloads configuration file successfully.	1.3.6.1.4.1.171 .14.14.0.4
dsfSaveCfg	The notification is sent when the user saves configuration file successfully.	1.3.6.1.4.1.171 .14.14.0.5

#### Web-Authentication

Trap Name	Description	OID
dWebAuthLoggedSuccess	The trap is sent when a host has successfully logged in (passed Web-Authentication).	1.3.6.1.4.1.171 .14.154.0.1
	Binding objects:	
	(1) ifIndex	
	(2) dnaSessionAuthVlan	
	(3) dnaSessionClientMacAddress	
	(4) dnaSessionClientAddrType	
	(5) dnaSessionClientAddress	
	(6) dnaSessionAuthUserName	
dWebAuthLoggedFail	The trap is sent when a host has failed to pass Web- Authentication (login failed).	1.3.6.1.4.1.171 .14.154.0.2
	Binding objects:	
	(1) ifIndex	
	(2) dnaSessionAuthVlan	
	(3) dnaSessionClientMacAddress	
	(4) dnaSessionClientAddrType	
	(5) dnaSessionClientAddress	
	(6) dnaSessionAuthUserName	

# **Appendix C - RADIUS Attributes Assignment**

The RADIUS Attributes Assignment on the DGS-1510 is used in the following modules: Console, Telnet, SSH, Web, 802.1X, MAC-based Access Control, JWAC, and WAC.

The description that follows explains the following RADIUS Attributes Assignment types:

- Privilege Level
- Ingress/Egress Bandwidth
- 802.1p Default Priority
- VLAN
- ACL

To assign the **Privilege Level** by the RADIUS server, the proper parameters should be configured on the RADIUS server. The table below shows the parameters for the bandwidth.

The parameters of the Vendor-Specific attributes are:

Vendor-Specific Attribute	Description	Value	Usage
Vendor-ID	Defines the vendor.	171 (DLINK)	Required
Vendor-Type	Defines the attribute.	1	Required
Attribute-Specific Field	Used to assign the privilege level of the user to operate the switch.	Range (1-15)	Required

If the user has configured the privilege level attribute of the RADIUS server (for example, level 15) and the Console, Telnet, SSH, and Web authentication is successful, the device will assign the privilege level (according to the RADIUS server) to this access user. However, if the user does not configure the privilege level attribute and authenticates successfully, the device will not assign any privilege level to the access user. If the privilege level is configured less than the minimum supported value or greater than the maximum supported value, the privilege level will be ignored.

To assign the **Ingress/Egress Bandwidth** by the RADIUS server, the proper parameters should be configured on the RADIUS Server. The table below shows the parameters for bandwidth.

Vendor-Specific Attribute	Description	Value	Usage
Vendor-ID	Defines the vendor.	171 (DLINK)	Required
Vendor-Type	Defines the attribute.	2 (for ingress bandwidth) 3 (for egress bandwidth)	Required
Attribute-Specific Field	Used to assign the bandwidth of a port.	Unit (Kbits)	Required

The parameters of the Vendor-Specific attributes are:

If the user has configured the bandwidth attribute of the RADIUS server (for example, ingress bandwidth 1000Kbps), and 802.1X, MAC-based Access Control, JWAC or WAC authentication is successful, the device will assign the bandwidth (according to the RADIUS server) to the port. However, if the user does not configure the bandwidth attribute and authenticates successfully, the device will not assign any bandwidth to the port. If the bandwidth attribute is configured on the RADIUS server with a value of "0", the effective bandwidth will be set "no\_limited", and if the bandwidth is configured less than "0" or greater than maximum supported value, the bandwidth will be ignored.

To assign the **802.1p Default Priority** by the RADIUS server, the proper parameters should be configured on the RADIUS server. The table below shows the parameters for 802.1p default priority.

Vendor-Specific Attribute	Description	Value	Usage
Vendor-ID	Defines the vendor.	171 (DLINK)	Required
Vendor-Type	Defines the attribute.	4	Required
Attribute-Specific Field	Used to assign the 802.1p default priority of the port.	0 to 7	Required

The parameters of the Vendor-Specific attributes are:

If the user has configured the 802.1p priority attribute of the RADIUS server (for example, priority 7) and 802.1X, MAC-based Access Control, JWAC or WAC authentication is successful, the device will assign the 802.1p default priority (according to the RADIUS server) to the port. However, if the user does not configure the priority attribute and authenticates successfully, the device will not assign a priority to this port. If the priority attribute is configured on the RADIUS server is a value out of range (>7), it will not be set to the device.

To assign the **VLAN** by the RADIUS server, the proper parameters should be configured on the RADIUS server. To use VLAN assignment, RFC 3580 defines the following tunnel attributes in RADIUS packets.

<b>RADIUS Tunnel Attribute</b>	Description	Value	Usage
Tunnel-Type	This attribute indicates the tunneling protocol(s) to be used (in the case of a tunnel initiator) or the tunneling protocol in use (in the case of a tunnel terminator).	13 (VLAN)	Required
Tunnel-Medium-Type	This attribute indicates the transport medium being used.	6 (802)	Required
Tunnel-Private-Group-ID	This attribute indicates group ID for a particular tunneled session.	A string (VID)	Required

The table below shows the parameters for a VLAN:

A summary of the Tunnel-Private-Group-ID Attribute format is shown below.

The table below shows the definition of Tag field (different with RFC 2868):

Tag field value	String field format	
0x01	VLAN name (ASCII)	
0x02	VLAN ID (ASCII)	
Others	When the switch receives the VLAN setting string, it will think it is the VLAN ID first. In other words, the switch will check all existing	

Tag field value	String field format
(0x00, 0x03 ~ 0x1F, >0x1F)	VLAN IDs and check if there is one matched. If the switch can find one matched, it will move to that VLAN. If the switch cannot find the matched VLAN ID, it will think the VLAN setting string as a "VLAN Name". Then it will check that it can find out a matched VLAN Name.

**NOTE:** A tag field of greater than 0x1F is interpreted as the first octet of the following field.

If the user has configured the VLAN attribute of the RADIUS server (for example, VID 3), and the 802.1X, MAC-based Access Control, JWAC or WAC authentication is successful, the port will be assigned to VLAN 3. However if the user does not configure the VLAN attributes, when the port is not guest VLAN member, it will be kept in its current authentication VLAN, and when the port is guest VLAN member, it will be assigned to its original VLAN.

To assign the **ACL** by the RADIUS server, the proper parameters should be configured on the RADIUS server. The table below shows the parameters for an ACL.

#### VSA14 ACL Script

The parameters of the Vendor-Specific Attribute are:

<b>RADIUS Tunnel Attribute</b>	Description	Value	Usage
Vendor-ID	Defines the vendor.	171 (DLINK)	Required
Vendor-Type	Defines the attribute.	14 (for ACL script)	Required
Attribute-Specific Field	Used to assign the ACL script. The format is based on Access Control List (ACL) Commands.	ACL Script For example: ip access-list a1;permit host 10.90.90.100;exit; mac access-list extended m1;permit host 00-00-00-01-90-10 any; exit;	Required

If the user has configured the ACL attribute of the RADIUS server (for example, ACL script: ip accesslist a1;permit host 10.90.90.100;exit; mac access-list extended m1;permit host 00-00-01-90-10 any; exit;), and the 802.1X, MAC-based Access Control, JWAC or WAC authentication is successful, the device will assign the ACL script according to the RADIUS server. The enter **Access-List Configuration Mode** and exit **Access-List Configuration Mode** must be a pair, otherwise the ACP script will be reject. For more information about the ACL module, please refer to **Access Control List (ACL) Commands** chapter.

#### NAS-Filter-Rule (92)

The table below shows the parameters for NAS-Filter-Rule:

<b>RADIUS Tunnel Attribute</b>	Description	Value	Usage
NAS-Filter-Rule		A string (concatenating the individual filter rules, separated by a NULL (0x00) octet)	Required

#### Filter Rule Format

Use the permit command to add a permit entry. Use the deny command to add a deny entry.

{permit | deny} in tcp from any to {any | DST-IP-ADDR | DST-IP-NET-ADDR | DST-IPV6-ADDR | DST-IPV6-NET-ADDR | TCP-PORT-RANGE]

{permit | deny} in udp from any to {any | DST-IP-ADDR | DST-IP-NET-ADDR | DST-IPV6-ADDR | DST-IPV6-NET-ADDR} [UDP-PORT-RANGE]

{permit | deny} in icmp from any to {any | DST-IP-ADDR | DST-IP-NET-ADDR | DST-IPV6-ADDR | DST-IPV6-NET-ADDR} [ICMP-TYPE]

{permit | deny} in ip from any to {any | DST-IP-ADDR | DST-IP-NET-ADDR | DST-IPV6-ADDR | DST-IPV6-NET-ADDR}

{permit | deny} in *IP-PROT-VALUE* from any to {any | *DST-IP-ADDR* | *DST-IP-NET-ADDR* | *DST-IPV6-ADDR* | *DST-IPV6-NET-ADDR*}

Parameter	Description	
in	Specifies the ingress traffic.	
any	Specifies any source IP address or any destination IP address to be configured.	
DST-IP-ADDR	Specifies a specific destination host IP address.	
DST-IP-NET-ADDR	Specifies a group of destination IP addresses with a mask width of the form 1.2.3.4/24.	
DST-IPV6-ADDR	Specifies a specific destination host IPv6 address.	
DST-IPV6-NET-ADDR	Specifies a group of destination IPv6 network of the form 2000::1/64.	
tcp, udp, icmp	Specifies Layer 4 protocols.	
ip	Specifies that any protocol will match.	
IP-PROT-VALUE	Specifies the IP protocol value. The valid value is from 0 to 255.	
TCP-PORT-RANGE	(Optional) Specifies to match TCP port or port range. The form is like: 22-23, 80.	
UDP-PORT-RANGE	(Optional) Specifies to match UDP port or port range. The form is like: 56, 67-68.	
ICMP-TYPE	(Optional) Specifies the ICMP message type. The valid number for the message type is from 0 to 255.	

#### Parameters

#### Example

This example shows how to deny host's telnet service on the RADIUS server.

Nas-filter-Rule="deny in tcp from any to any 23" Nas-filter-Rule+="permit in ip from any to any"

This example shows how to limit host to access a group of IP address on the RADIUS server.

Nas-filter-Rule="permit in ip from any to 10.10.10.1/24" Nas-filter-Rule+="permit in ip from any to fe80::d1:1/64"

The parameters of the Vendor-Specific Attribute are:

RADIUS Tunnel Attribute	Description	Value	Usage
Vendor-ID	Defines the vendor.	171 (DLINK)	Required

<b>RADIUS Tunnel Attribute</b>	Description	Value	Usage	
Vendor-Type	Defines the attribute.	14 (for ACL script)	Required	
Attribute-Specific Field	IPv6 filter rule, Used to accept IPv6 address related inputs.	This attribute indicates either of the following IP modes for NAS-Filter-Rule	IP	
		1=Forward IPv4 and IPv6 traffic		
		2=Forward IPv4-only traffic (drop any IPv6 traffic)		
		If this attribute is not assigned by RADIUS server, forward IPv4-only traffic, any IPv6 packet will be dropped.		

**NOTE:** If both proprietary ACL script (VSA14) and standard NAS-Filter-Rule (92) are assigned at the same time, NAS-Filter-Rule (92) will take effect, and VSA14 will be ignored.

# **Appendix D - IETF RADIUS Attributes Support**

Remote Authentication Dial-In User Service (RADIUS) attributes carry specific authentication, authorization, information and configuration details for the request and reply. This appendix lists the RADIUS attributes currently supported by the switch.

RADIUS attributes are supported by the IETF standard and Vendor-Specific Attribute (VSA). VSA allows the vendor to create an additionally owned RADIUS attribute. For more information about D-Link VSA, refer to the **RADIUS Attributes Assignment** Appendix.

IETF standard RADIUS attributes are defined in the RFC 2865 Remote Authentication Dial-In User Service (RADIUS), RFC 2866 RADIUS Accounting, RFC 2868 RADIUS Attributes for Tunnel Protocol Support, and RFC 2869 RADIUS Extensions.

The following table lists the IETF RADIUS attributes supported by the D-Link switch.

Number	IETF Attribute	
1	User-Name	
2	User-Password	
3	CHAP-Password	
4	NAS-IP-Address	
5	NAS-Port	
6	Service-Type	
7	Framed-Protocol	
8	Framed-IP-Address	
12	Framed-MTU	
18	Reply-Message	
24	State	
26	Vendor-Specific	
27	Session-Timeout	
29	Termination-Action	
30	Called-Station-ID	
31	Calling-Station-ID	
32	NAS-Identifier	
60	CHAP-Challenge	
61	NAS-Port-Type	
64	Tunnel-Type	
65	Tunnel-Medium-Type	
77	Connect-Info	
79	EAP-Message	
80	Message-Authenticator	
81	Tunnel-Private-Group-ID	
85	Acct-Interim-Interval	
87	NAS-Port-ID	

#### **RADIUS Authentication Attributes:**

Number	IETF Attribute
95	NAS-IPv6-Address

#### RADIUS Accounting Attributes:

Number	IETF Attribute	
1	User-Name	
4	NAS-IP-Address	
5	NAS-Port	
6	Service-Type	
8	Framed-IP-Address	
31	Calling-Station-ID	
32	NAS-Identifier	
40	Acct-Status-Type	
41	Acct-Delay-Time	
42	Acct-Input-Octets	
43	Acct-Output-Octets	
44	Acct-Session-ID	
45	Acct-Authentic	
46	Acct-Session-Time	
47	Acct-Input-Packets	
48	Acct-Output-Packets	
49	Acct-Terminate-Cause	
52	Acct-Input-Gigawords	
53	Acct-Output-Gigawords	
61	NAS-Port-Type	
95	NAS-IPv6-Address	

# **Appendix E - ERPS Information**

Only hardware-based ERPS (external PHY) supports the fast link drop interrupt feature with a recovery time of 50ms.

Model Name	ERPS	Port 1 to 20
DGS-1510-20	Hardware-based	
	Software-based	V

Model Name	ERPS	Port 1 to 8	Port 9 to 28
DGS-1510-28	Hardware-based	V	
DGS-1510-28P	Tialuwale-baseu	V	
DGS-1510-28X	Coffware beed		N/
DGS-1510-28XMP	Software-based		V

Model Name	ERPS	Port 1 to 8	Port 9 to 24	Port 25 to 32	Port 33 to 52
DGS-1510-52	Hardware-based	V		V	
	Software-based		V		V

Model Name	ERPS	Port 1 to 8		Port 25 to 32			Port 51 to 52
DGS-1510-52X	Hardware-based	V		V		V	
(HW: A1)	Software-based		V		V		V

Model Name	ERPS	Port 1 to 16	Port 17 to 24	Port 25 to 40	Port 41 to 48	Port 49 to 52
DGS-1510-52X	Hardware-based		V		V	
(HW: A2) DGS-1510-52XMP	Software-based	V		V		V
