D-Link Cable/DSL Residential Gateway **DI-804**

Setup Wizard

The Setup Wizard will walk you through the necessary steps to get your DI-804 connected to your ISP and to your local computer(s) or network.

Please note that there are many different types of configurations specific to different ISPs. This wizard will try to make best judgements in configuring your unit. If at the end of the Wizard you are unable to connect to the Internet, please manually configure the DI-804 using [Basic Setup](#). Detailed instructions for manual configuration is provided in your manual.

Use this Wizard by clicking on the answer that best describes your installation, or using the pull down menu or open field boxes to input the requested information.

Do you have a [Cable](#) or [DSL](#) Modem or [Ethernet](#)?

Internet

Enter the **Computer Name** as given by Optus to your PC.

Make sure the **Domain Name** are **BLANK** in there as shown below.

Or, you could enter the domain suffix for your area

(eg. suburb.nsw.optushome.com.au) which you could find out from Optus.

Click "Next"

You can continue clicking "Next" for all the coming steps.

And click "Finish" when all are done.

Cable/DSL Residential Gateway **DI-804**

Setup Wizard - Specific Application Support

Some applications require that ports are opened in the firewall in the DI-804. At the right is a list of common applications that require ports to be opened to function properly. Please note that these ports will be redirected only to the machine you are using to configure the unit right now. Please also note that most of these applications will only work on a single machine behind a firewall at one time. The common port(s) for the application will be opened.

Go to **Open Ports** if you wish to allow other applications not listed here to be accessed from the Internet or if you wish to redirect ports to other computers on your network.

Open ports are a security risk. Only open ports for applications that you use regularly. Do not open unnecessary ports.

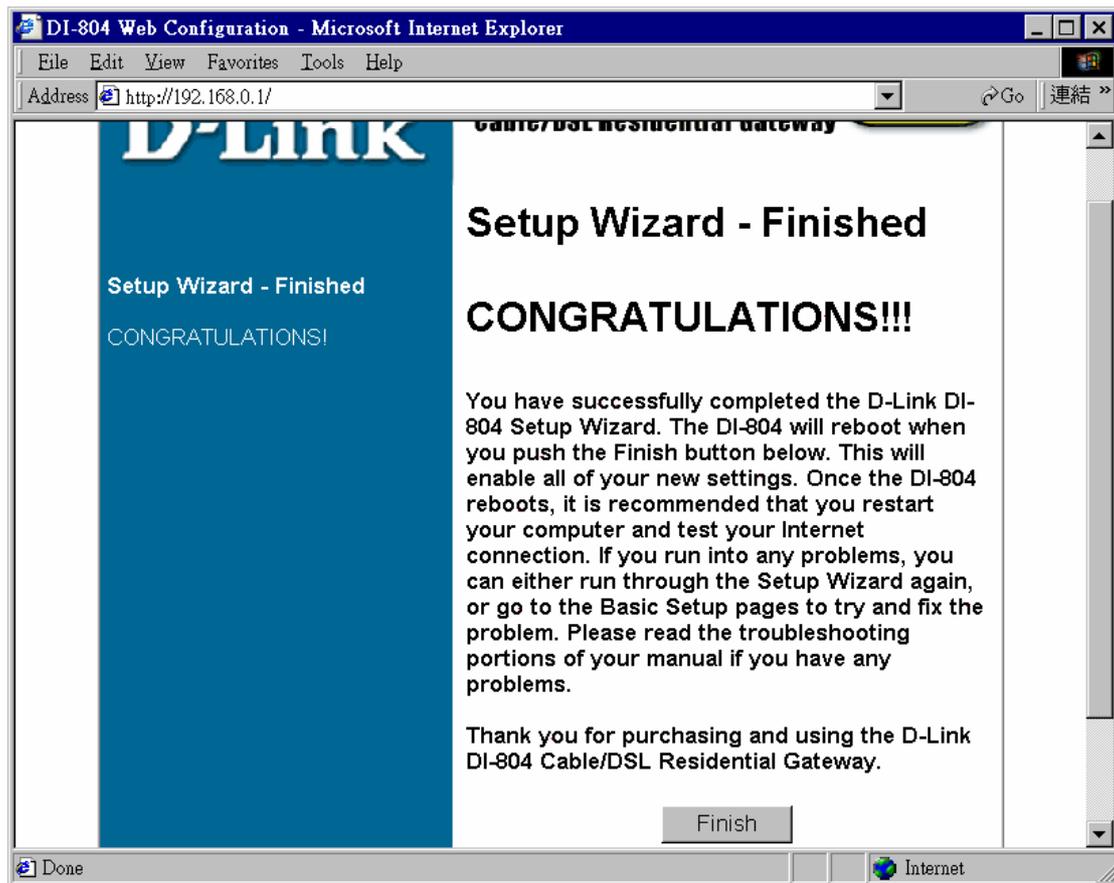

Setup Wizard - Specific Application Support

- Communications**
 - Netmeeting
 - ICQ
 - mIRC
 - PPTP VPN Client
- Games**
 - Battlenet - Warcraft, Starcraft, Diablo, Diablo II
 - Age of Empires

- Server Applications (Only select if you are running a server)**
 - HTTP Server
 - FTP Server
 - Terminal Services
 - PPTP Server

Next

Done Internet

Connect DI-804 WAN to the Cable modem using a Straight-through cable.

You can Power OFF/ON to restart the DI-804

OR

Go back to **Main Page**, click on **System Management**, click **Reboot**.

“Yes” to Restart the DI-804.

[Important Notes to Optus users:](#)

- 1) You have to ADD Optus DNS servers information (please find this out from Optus) into each PC's Control Panel > Network > TCP/IP – Your Network Card Properties > DNS Configuration > Enable DNS > DNS Server Search Order (eg. Type in 203.2.75.2, Click “Enter”)
- 2) Under the same tab, you can enter Host = user1, Domain = optushome.com.au
- 3) OK and you will be asked to restart your PC. Restart it.
- 4) In addition, with Optus cable you need to check, on your IE browser, (Tools > Internet Options > Connection tab - LAN settings) "Use automatic configuration script" Unchecked/Unticked. All others Unchecked/Unticked too.
- 5) On your PC where Optus has installed some software, you need to Remove/Uninstall it completely. (Check under Control Panel > Add/Remove

Program to see if it is still there or not). When done, restart that PC. In some instances, registry changes are required in order to remove Optus software completely. Please contact Optus for this. Or, you should try on your other PC (where the software is not installed) first.

You should be alright to surf now from all PCs.
