

DIR-632 How to setup Port Forwarding

1. Using an Internet Browser type into the URL:

<http://192.168.0.1>

Product Page: DIR-632 Hardware Version: A1 Firmware Version: 1.03

D-Link

LOGIN

Log in to the router:

User Name : Admin ▾

Password :

Login

WIRELESS

Type in your Password if you have changed it, or leave it blank and then click on the Login button.

NOTE: Changing the Port Forwarding values can be performed under Wireless, however we do not recommend it.

2. Before proceeding, you will need to know the actual Ports that your application requires.

You will also need to know the IP Address of the computer/laptop that you would like the Ports to be binded to. It is not recommended to have a Port Forward entry on a connected computer/laptop without a Static IP Address assigned and or a DHCP Reservation setup on the DIR-632.

DIR-632 How to setup Port Forwarding

3. Now click on ADVANCED menu then Click on PORT FORWARDING.

The screenshot shows the D-Link DIR-632 web interface. At the top, it displays 'Product Page: DIR-632', 'Hardware Version: A1', and 'Firmware Version: 1.03'. The D-Link logo is prominent. Below the logo is a navigation menu with 'DIR-632' selected, and sub-menus for 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'SUPPORT'. The 'ADVANCED' menu is expanded, showing a list of options: 'VIRTUAL SERVER', 'PORT FORWARDING' (highlighted), 'APPLICATION RULES', 'QOS ENGINE', 'NETWORK FILTER', 'ACCESS CONTROL', 'WEBSITE FILTER', 'INBOUND FILTER', 'FIREWALL SETTINGS', 'ROUTING', 'ADVANCED WIRELESS', 'WI-FI PROTECTED SETUP', 'ADVANCED NETWORK', and 'IPV6 ROUTING'. The main content area is titled 'PORT FORWARDING RULES:'. It contains a text box explaining the feature: 'This option is used to open multiple ports or a range of ports in your router and redirect data through those ports to a single PC on your network. This feature allows you to enter ports in various formats including, Port Ranges (100-150), Individual Ports (80, 68, 888), or Mixed (1020-5000, 689)'. Below this text are 'Save Settings' and 'Don't Save Settings' buttons. A table titled '24 --- PORT FORWARDING RULES' is shown, with columns for 'Name', 'IP Address', 'Ports to Open' (TCP/UDP), and 'Schedule'. The table has three rows, each with a checkbox, a name field, an IP address field, a port type dropdown, a port number field, and a schedule dropdown. To the right of the table is a 'Helpful Hints...' section with text explaining the 'Application Name' and 'Computer Name' dropdown menus and the 'Schedule' field.

5. This guide will advise on what is required for an FTP Server (Port 21) and the popular Peer to Peer application Utorrent which has been configured to run on Port 6881.

6. To allow FTP click on the checkbox and under Application Name select FTP from the drop down menu and click on the corresponding "<<" button in front of the FTP selection. Now under the IP Address type in 192.168.0.100 (remember the IP Address assigned under DHCP Reservation?)

7. Now click on the Save Settings button.

8. Now repeat Step 6, however this time selecting the 2nd entry, click the checkbox, under Name type in Utorrent, and under the Public Port type in 6881 to both entries and under IP Address type in 192.168.0.100 and under the Private Port type in 6881 as well. Under the Traffic Type select Any from the drop down menu.

9. Now again click on the Save Settings button.

DIR-632 How to setup Port Forwarding

10. Both entries should look similar to the below:

PORT FORWARDING RULES:

This option is used to open multiple ports or a range of ports in your router and redirect data through those ports to a single PC on your network. This feature allows you to enter ports in various formats including, Port Ranges (100-150), Individual Ports (80, 68, 888), or Mixed (1020-5000, 689).

24 -- PORT FORWARDING RULES

			Ports to Open	
<input checked="" type="checkbox"/>	Name		TCP	Schedule
	FTP	<< Application Name	21	Always
	IP Address	<< Computer Name	UDP	Inbound Filter
	192.168.0.10		0	Allow All
<input checked="" type="checkbox"/>	Name		TCP	Schedule
	uTorrent	<< Application Name	6881	Always
	IP Address	<< Computer Name	UDP	Inbound Filter
	192.168.0.100		6881	Allow All
	Name		TCP	Schedule

11. Port Forwarding for FTP and Utorrent is now configured for this computer in this example.

IMPORTANT:

There are many ways in which to obtain the Ports needed for your Application, including referring to your application documentation to searching online.

Please remember to ensure your DIR-632 has the most current firmware version applied. To apply this firmware please refer to the Technical Support Knowledge Base.
