Wireless Media Player

D-Link introduces the latest addition to its multimedia family of products: the **D-Link DSM-320 Wireless Media Player**.

The DSM-320 unites your network with your home entertainment centre, allowing you to share, access, and enjoy your digital media—whether it is music, videos, or photos—in the comfort of your living room.

The DSM-320 supports 802.11g wireless standards with transfer speeds up to 54Mbps, giving you maximum throughput for your digital media. Setting up the DSM-320 is simple, and the sleek design makes it a natural addition to your home entertainment centre.

AV jacks on the back panel of the DSM-320 can be plugged directly into your TV, letting you access media content stored on your PC, browse your music files, watch your videos, and display your photos.

The DSM-320 adheres to the Universal Plug-&-Play AV specification, and complies with Intel Networked

Media Product Requirements (INMPR), allowing it to communicate with other UPnP AV media devices seamlessly.

The DSM-320 supports and streams virtually all audio, video, and image formats stored on your PC.

With support for MP3, WMA and WAV audio files, listen to all of your music on your stereo. Watch your stored videos in MPEG1/2/4, AVI, QuickTime or Xvid formats on your TV or enjoy slideshows of your favorite photos in JPEG, JPEG2000, TIFF, GIF, BMP or PNG formats.

Better yet, it's easy to access all your media files through the TV Interface using the remote control included with the DSM-320. Experience your digital media like never before with the DSM-320 Wireless Media Player.

The DSM-320 includes everything you need to instantly access and play your music, videos, and photos using your home entertainment centre.

Wireless Media Player

Network:
TCP/IP

Media Streaming Protocol:
HTTP

Supported Audio Formats:

- MP3
