Package Contents

Contents of Package

- D-Link DUB-T210 USB 2.0 MPEG 1/2/4 Encoder TV Tuner
- USB 2.0 Cable
- AV Cable
- 3.5mm Audio Cable(Win 2K Only)
- 4 Pin Mini-Din to RCA Jack
- Remote Controller
- CD-ROM(containing Drivers, Installation Guide, Manual, Application Software and Warranty)
- D-Link Quick Installation Guide

If any of the above items are missing, please contact your reseller.

System Requirements

- Pentium IV 2.4GHz or Above
- Microsoft Windows 2000 SP4/XP
- 256MB RAM or higher
- 52X CD-ROM
- 16bit or higher level Sound-Card
- One Available USB Port (USB 2.0)
- PCI/AGP 64 Bit VGA card or higher & Monitor

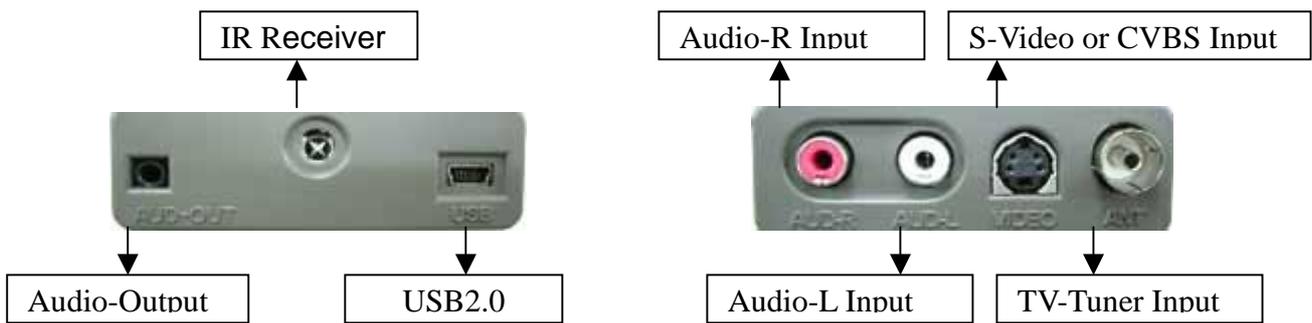

Introduction

The D-Link DUB-T210 is an advanced video capture and TV Tuner which provides you with a “high quality PC Theater” solution. The D-Link DUB-T210 allows you to capture 30 frames per second (fps) while giving you up to 720x480 resolution for a high quality video image on a PC or notebook using USB2.0. The DUB-T210 captures CD quality stereo audio with a 16 bit, 44.1KHz sampling rate and provides audio/video synchronization. The “Snapshot” function lets you catch 720x480 still images form your video source.

With the user-friendly program, TV Plus, you can easily transfer the captured audio/video bit stream into other standard formats such as AVI, MPEG4, VCD and DVD.

Please read the information below which is aimed to assist you in using the **TV PLUS** software with your **DUB-T210 MPEG Encoder TV Tuner**.

Getting To Know Your USB 2.0 MPEG 1/2/4 Encoder TV Tuner

Features and Benefits

- Full TV Function CATV/VHF/UHF
- Full Channel/ Auto-Scan Function
- DVD Quality(720x480-NTSC, 720x576-PAL)
- SVCD Quality(480x480-NTSC, 480x576-PAL)
- VCD Quality(352x240-NTSC, 358x288-PAL)
- Time-Shifting Recording
- Real-Time MPEG Compression
- Professional Snap-Shot 720x480 Still Image Capture(MAX)
- Analog to Digital Video Convert
- Pre-schedule a Recording Appointment of Your Favorite Show
- Audio Capture & A/V Synchronization Function
- Saturation/Contrast/Hue/Brightness Adjustment
- Create MPEG1/2/4 Movies
- Direct Burn-to-Disc of Recorded MPEG1 /2/4 with CD/DVD Burner
- Video Editing Software Include

In the following pages, you will be guided through the operation of the Application, TV PLUS

The contents are divided into 5 parts, 1. Main Window

2. TVR

3. MPEG Encoder

4. Video Editor

5. Burn DVD

Welcome to TV PLUS

1. TV PLUS

Welcome to **TV Plus**

Thank you for choosing TV Plus, the application that takes full advantage of the capabilities of your DUB-T210.

TV Plus has many digital video applications.

Using honestech's very powerful MPEG encoding engine, you can capture, compress and save high quality full motion video in files 15 to 20 times smaller than their original size with no loss of video quality.

Finally, TV Plus makes it possible to edit and organize still and full motion media files.

With TV PLUS, you can:

- TV Plus" multi-media digital shell " makes it possible to manage and store photo, video and audio files in individual "albums." In addition, the highly integrated shell allows drag-and-dropping of files from album to album and from application to albums. The following MPEG based applications are included:
- "TVR" records high quality full motion video using your DUB-T210.
- "MPEG Encoder" is the "must-have" utility for converting and compressing AVI & DV-AVI files to MPEG-1 and MPEG-2 formats.
- "Video Editor" makes editing MPEG videos easy.
- "Burn DVD" creates DVD that can be played on a PC or DVD Player.

2. Main Window

The following main window are included:

. Menu

1. **File:** Add, Delete, Rename, Duplicate, Information, Refresh.
2. **Sort:** Sort by name, type, and date.
3. **Edit:** Open Edit Window for photo files. Play back video files.
4. **Mail:** Send selected file through E-mail application
5. **Import:** Download pictures from dual-mode camera.
6. **Export:** Copy selected files to other directory.

. Application Bar

1. **TVR:** TVR turns your PC into a full-featured digital video recorder for TV!
2. **MPEG Encoder:** MPEG Encoder converts AVI files into MPEG format
3. **Video Editor:** Video Editor makes editing MPEG videos easy
4. **Burn DVD:** Burn DVD creates DVD that can be played on a PC or DVD player.

. **Multimedia Data Window**

1. Photo Editing: Either double-click on a photo file (BMP or JPEG) or highlight a photo then select the Edit menu to change the data window to photo edit window.
- 2.Video Viewing: Either double-click on a full motion video file (MPEG or AVI) or select the Edit menu to play back the selected video file.
- 3.Drag and Drop makes transferring files easy between data the window and other applications or among albums.

. **Photo Edit Window**

1. To edit a photo file (BMP or JPG), either double-click on the photo or highlight the photo and then click on the Edit menu (as in the above picture).
- 2.The following items cannot be used in editing mode: Album bar, Menu, Exit button.

- . **Album Bar** : This Bar displays existing albums and has buttons for managing albums (New,Delete,rename,Info)

3. **TVR**

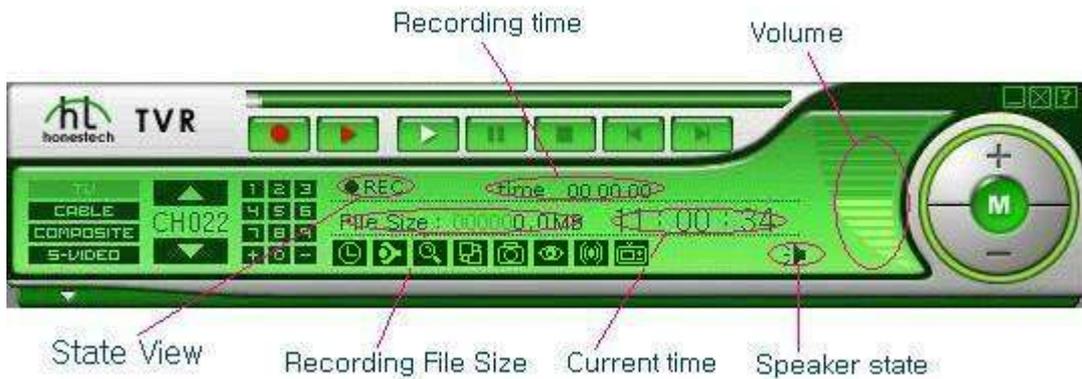

The TVR screen is composed of these 2 parts

- . Display Window: Your source video input is displayed

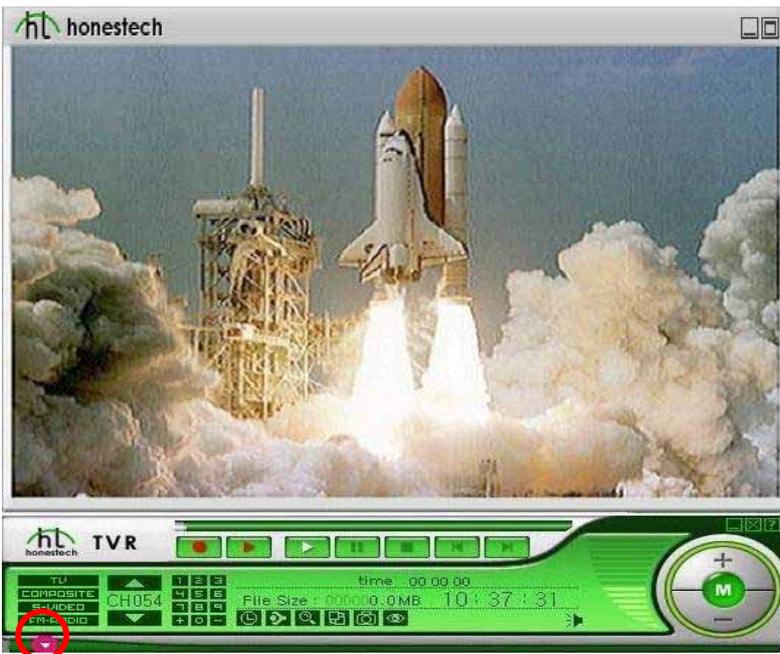

. Informat Window

Display system state (REC, PLAY, TIME SHIFT), audio volume, speaker state, recording time, recording file size and current time.

3.1.FilePool function

Press the FilePool button to view the Recording List window, which has 3 additional function buttons.

3.1.1[Edit] button

- Click this button to edit the selected file.
- An editing function will be automatically executed.

Explain Editor Window

1. Play button : (When selecting the areas) play the selected areas.
(When not selecting the areas) play the overall files.
2. Pause button : Pause the recording.
3. Stop button : Stop the recording.
4. Move pre frame
5. Move next frame
6. Set the start point of area
7. Set the end point of area
8. Delete the selected area.
9. Save the selected areas as a file.

3.1.2.[Send mail] button

- Attach the selected file to e-mail, and send the e-mail
- Your e-mail program will be automatically executed so that you can check that the selected file is attached.

3.1.3. [List view] button

- Change the type of viewing in FilePool window. Three types of viewing will be rotated whenever you click.

3.1.3.1. Show preview and file name.

3.1.3.2. Show name only.

3.1.3.3. Show file name, file size and recording time.

3.2. Record & Timeshift & Player part.

3.2.1. Record

You can start to record or stop recording.

a. Click the  button

b.  is enabled.

c. [FilePool] window will be automatically shown when stop is pressed after the recording is started.

Follow the Recording steps using REC function

Run your Honestech TVR.

Press OPTION and choose driver, video resolution, national standard, etc...

Select input source(TV, Composite, S-Video, CATV) with SRC function.

When you want to record a TV program, select a channel button.

Press  to start recording and press  to end.

You can review your recorded file using the File pool function.

Exit program.

3.2.2. Time-shift

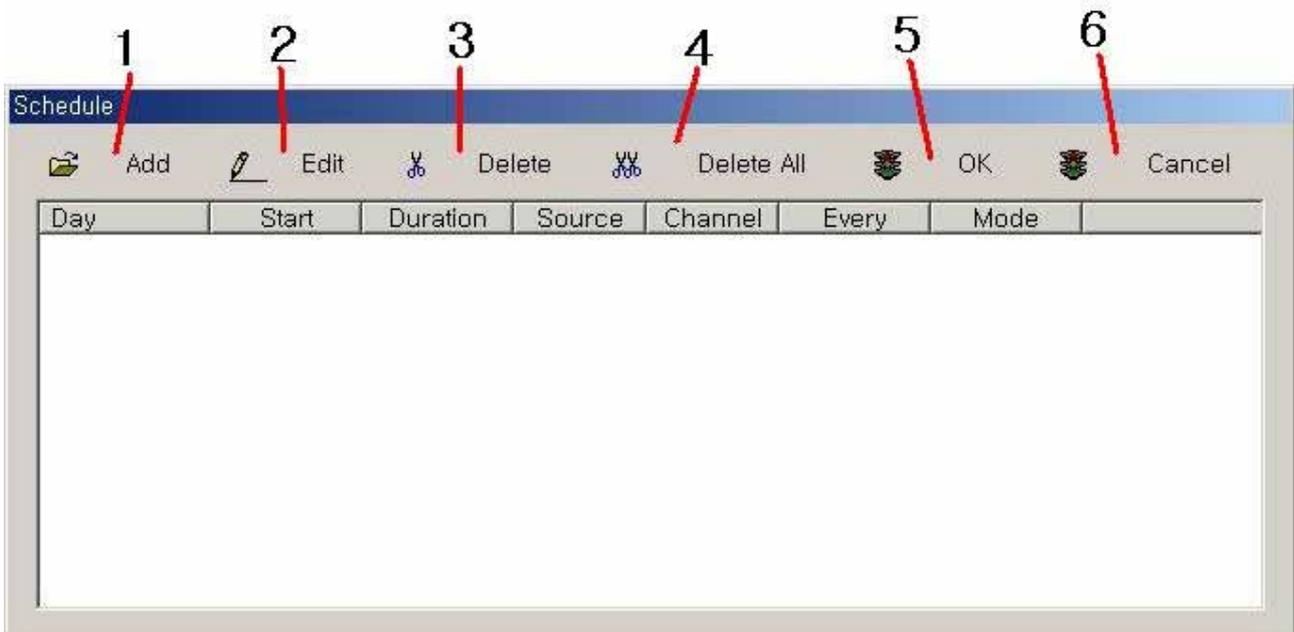

Time-shift is similar to Instant TV Replay in regards to the instant replay capability, but may only be used to video content.

- a. Be sure you are in the main display mode.
- b. Click the  button
- c.  is enabled.
- d. Buffering window will be automatically shown.
- e. The mode will switch to .
- f. To Fast Forward, Rewind, or Pause.
- g. To return to the recording or play mode, click  again

3.2.3. Player

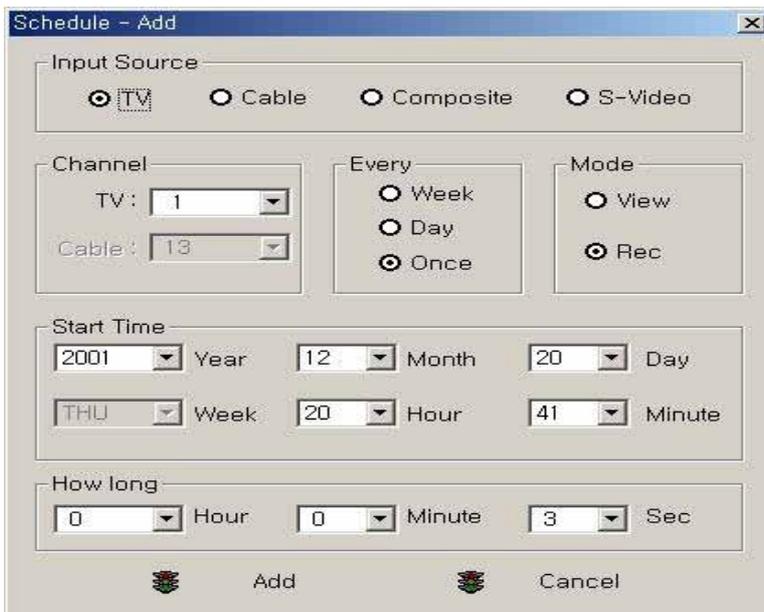

- a.  is play button. this button plays the file selected from the recorded files.
- b.  is pause button.
- c.  is stop button.
- d.  is moved at start frame.
- e.  is moved at end frame.
- f. MPEG player program will be automatically executed so that you can check the recorded contents.

3.3. Record Scheduling function

1. Add Schedule entry.
2. Edit selected item.
3. Delete selected item.
4. Delete Added all items.
- 5, End the schedule function.
6. Cancel the schedule function.

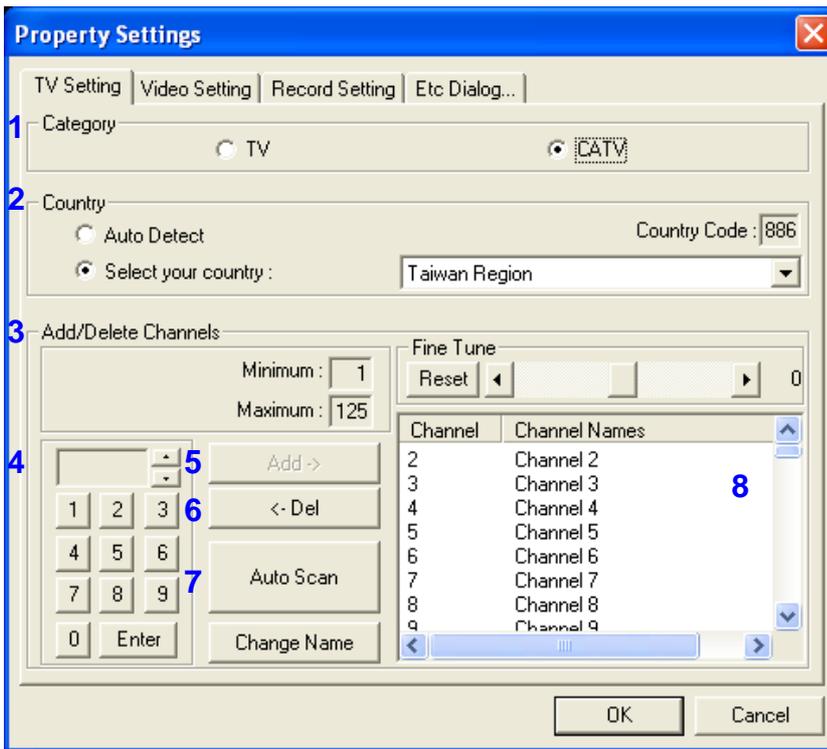

if Add button is selected, users can show follow dialog.

You can add the schedule items.

3.4. TV Option Setting

3.4.1. TV Setting

1. TV Category Setting.

- Specify minimum or maximum channel range at section 3.
- Available channels will be displayed at section 8.

2. Country code specification.

- "Auto Detect" will automatically detect country code and specify the code in "Country Code".
- if "Select your country" is selected, user needs to select correct country manually.

3. Specify minimum and maximum channel range available.

4. Channel selection.

- Use number pad or  button to enter channel numbers.
- Only numbers between minimum and maximum channel range will be accepted.
- Clicking "Enter" button will show TV program on the channel and enable "Add" button.

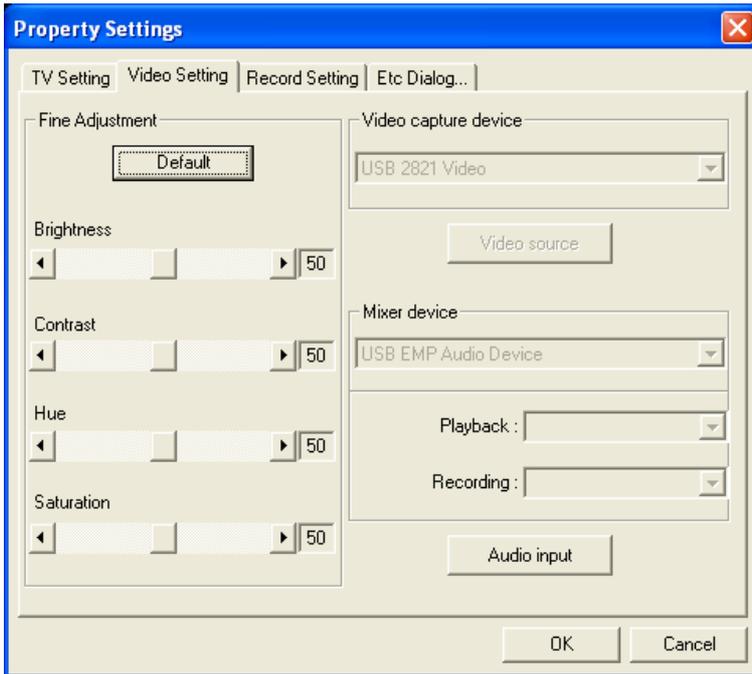

5. Add channel number entered.

6. Delete a channel number selected in section 8.

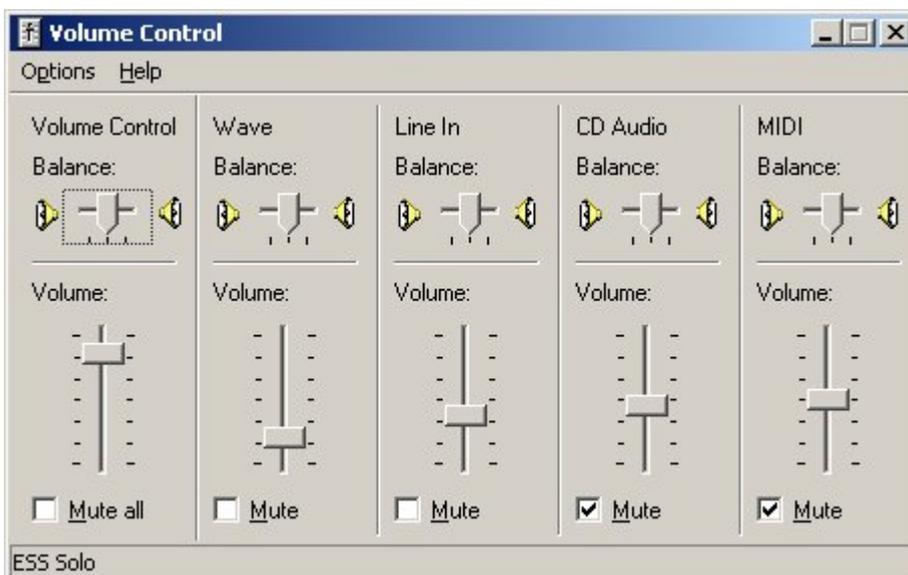

7. Perform auto scanning of available channels.

8. Display available channels

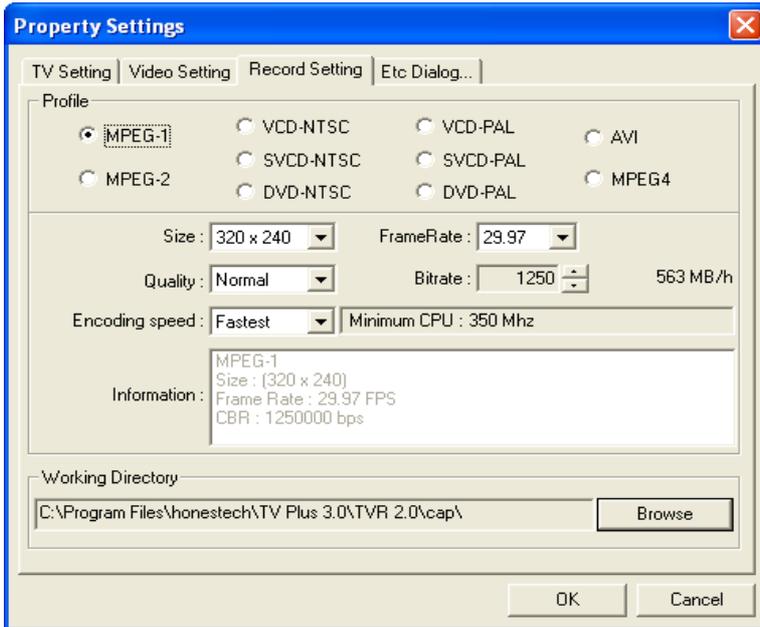

3.4.2. Video Setting

1. Reset the value of brightness, contrast, hue, and saturation to default value.
 2. Adjust brightness.
 3. Adjust contrast.
 4. Adjust hue.
 5. Adjust saturation.
 6. Select wanted video capture device.
 7. Select video Source.
 8. Select wanted Audio capture device.
 9. Select wanted Audio mixer line for playback and recording.
 10. Set volume for audio input.
- Clicking the button brings up the following volume control dialog box.

3.4.3. Record Setting.

1. Select profile.

- If MPEG-1 or MPEG-2 is selected, users need to set values at section 2 through 7.
- If VCD-PAL, VCD-NTSC or AVI is selected, predefined values will be displayed automatically at section 2 through 7.

2. Select screen size (176*144, 320*240, 352*240, 352*288, 640*240, 640*480 can be selected).

3. Select frame rate (15.00, 23.97, 24.00, 25.00, 29.97, 30.00 can be selected)

4. Select video quality level (Fast, Normal, Laziness can be selected).

5. Set bitrate.

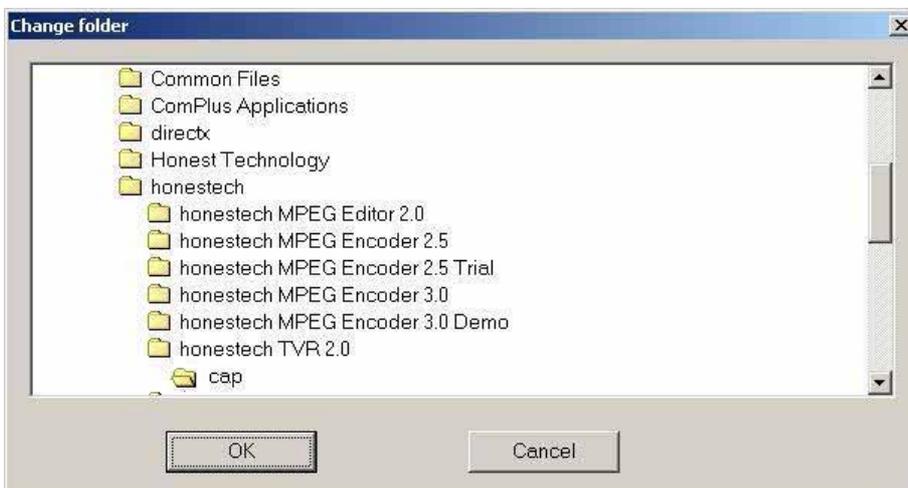

- Adjustment can be made by 50 Kbps interval.
- Default values : 2000 Kbps.

6. Select Encoding speed.

7. Display information on the selected profile.

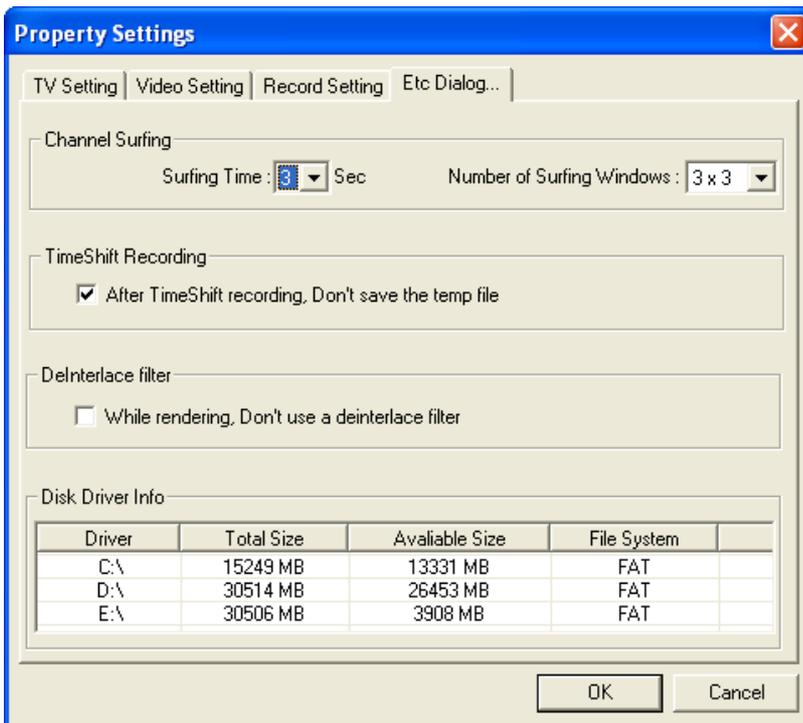

8. Specify working directory.

- Clicking "Browse" button brings up the following dialog box.

- Click "OK" button after selecting the directory.

3.4.4. Etc Dialog Setting

1. Setting the channel surfing property.

- Surfing Time : It is time to change from one channel to other channel.
- Number of Surfing windows : window size(2x2, 3x3, 4x4, 5x5)

2. Setting the TimeShift property.

- If the checkBox is checked, After timeshift recording temp file will be removed.

3. Setting the Deinterlace filter.

- If the checkBox is checked, while on previewing does not apply to deinterlace function.

4. View the Disk driver information on user's system.

3.5.Channel Auto Scan

if  is selected, you can show below dialog.

Users can auto scan available channel in his[shes] areas.

3.6.Change Skin

if  is selected, skin on the main panel is changed another colors.

3.7. Still Capture function

if  is selected, you can dump current frame in previewing window. captured image file is show in the file pool.

3.8.Channel Surfing function

if  is selected, you can channel surfing.

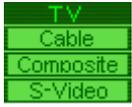

while channel surfing, you can select channel number that you want to see it also you can continue channel surfing as right mouse button press.

3.9. Input Source part

You can change your input source.

Input signal part in the Window will be changed whenever you click button.

: Input source TV

: Input source CABLE

: Input source COMPOSITE

: Input source S-VIDEO

3.10. Channel adjust part

: Channel selecting, When watching TV.

: Up channel list.

: Down channel list.

: Add current channel to channel list.

: Delete current channel from channel list.

3.11. Volume adjust part

You can increase or decrease sound volume.

: Increase sound volume

: Decrease sound volume

Mute function

3.12. Tray icon function

you can show  button on the taskbar.

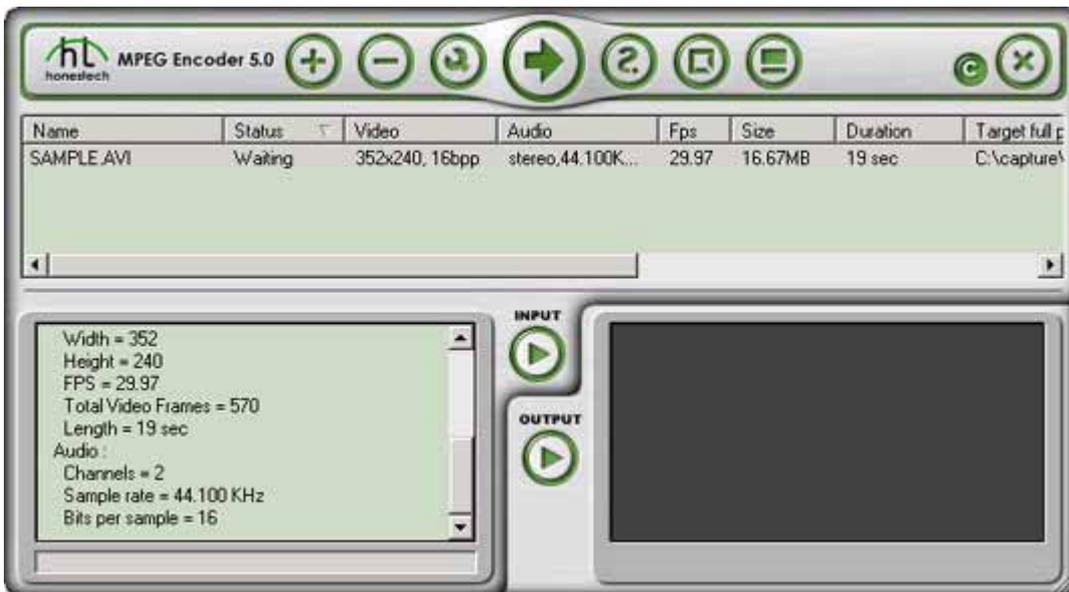

if  is selected, window will be show. then, you can reservation recording and launch TVR program.

4. MPEG Encoder

Interface Explanation

The default page as it appears when Encoder 5.0 is started:

The default page is composed of four parts.

Header Buttons (Left to right)	Add input files; Delete files; Edit options; Start and Stop transcoding.
Batch Process Display Window	Displays file name, encoding status, screen size and play time of files to be transcoded.
Progress Display Window	Displays formatting information about the file being transcoded.
Preview Display Window	Displays the video of the file being transcoded.

4.1. Header Buttons

Add	Add file(s) to be transcoded. Button initiates browse/selection dialog.
Delete	Highlight and delete selected file in Batch Process Display window.
Edit	Customize encoding options for selected file in Process Display window.
Encoding	Initiates transcoding of all files displayed as "Waiting" in status column in Process Display window. (Note: This button changes to "Stop" during the transcoding process.)
Stop	Terminates batch transcoding process.
Help	Launches Help file.
Minimize	Minimizes Encoder 5.0 interface.
Maximize	Maximizes Encoder 5.0 interface.
Color	Change color of program interface.
Exit	Ends Encoder 5.0 program.

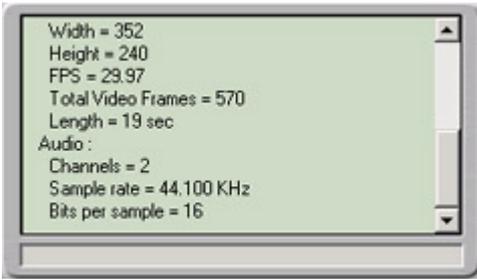

4.2. Batch Process Display Window

Name	Status	Video	Audio	Fps	Size	Duration	Target full p
SAMPLE.AVI	Waiting	352x240, 16bpp	stereo,44.100K...	29.97	16.67MB	19 sec	C:\capture\

Name Video file title(s) added to the program for transcoding. Status Displays one of three processing states. These are:

Waiting	Ready for transcoding.
Exception	Excluded from transcoding process. Encoder 5.0 doesn't transcode files in this status.
Complete	Transcoding finished.
Video	Formatted screen size of original video file.
Audio	Audio information for file. (If this field is blank, the file has no audio information.)
Fps (Frames Per econd)	Number of frames per second of the original file.
Size	Size of original file (Unit: Mega bytes)
Duration	Play time of original file (Unit: Seconds)
Target full path	Shows the intended location where the transcoded file will be saved.

4.3. Progress Display Window

The Progress Display Window provides three reports:

1. While Encoder 5.0 is loading, activity related to that process is displayed.
2. Once a video file is added to the Batch Process Display Window, technical specifications about the file are listed.
3. During the transcoding process, technical specifications about the output file are displayed.

4.4. Preview Display Part

The actual video is being displayed while it is being transcoded.

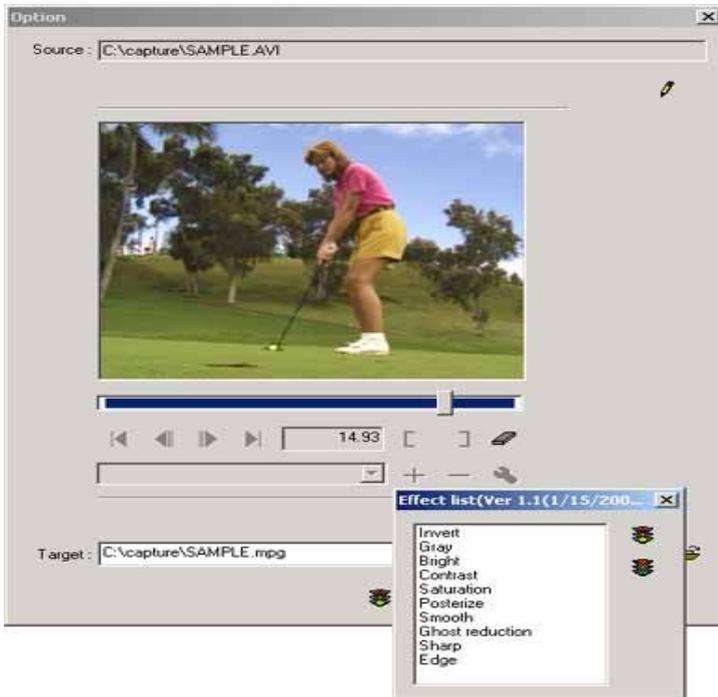

4.5. Option Dialog Box

When a video file is added to the Batch Process Display Window, the Option Dialog Box automatically opens. Four categories of output formats appear (MPEG 1, MPEG 2, WMV and AVI) with specific format selections within each. Choose one of the formats and click on "OK" to continue.

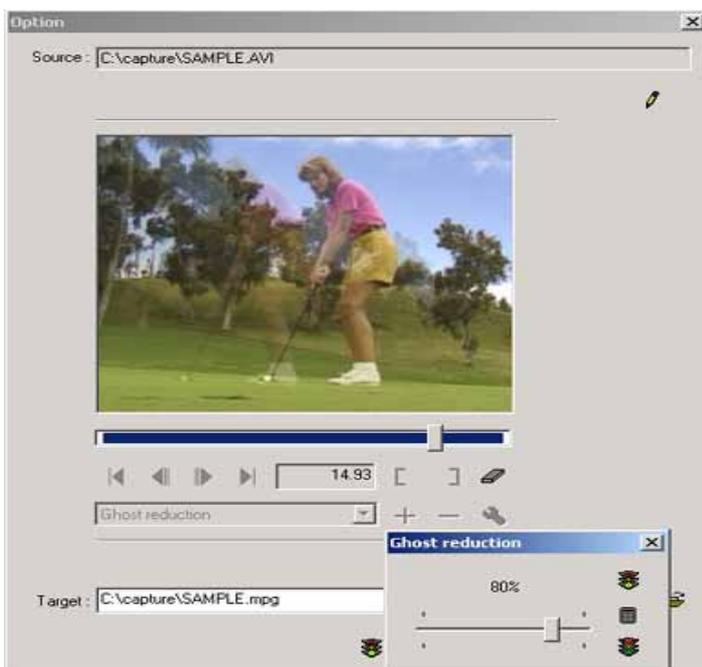

In the upper right hand corner of the Option Dialog Window is a "Change to Edit" icon. When selected, this feature makes it possible to select video segments in the file to be transcoded. It also allows video filters to be applied.

The "Change to Edit" dialog box.

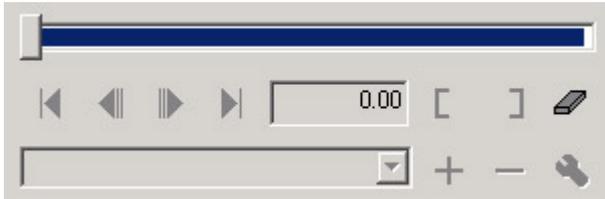

The "Change to Edit" dialog box provides filter options that can be applied to video segments during the transcoding process. These filters can be selected from the "Effect List" drop down box. (Note: As of this writing, ten filters come bundled with Encoder 5.0.) Time segments of the video can be isolated using the "Mark-in" and "Mark-out" icons with the slider bar and arrow buttons used to move the video along the time axis.

The next screen is an example of the Ghost reduction filter being applied to the original file.

The slider bar controls the level of the filter being applied to the video segment. Twenty filters (maximum) can be applied to any video segment. Features of the "Change to Edit" dialog box are (from left to right):

Slide Bar	This bar represents the time line of the video file to be transcoded. Movement of the Slider Bar can be controlled by the mouse or key board.
First	Moves to the starting point of the video segment.
Previous	Moves forward along the video time axis 0.5 seconds.
Next	Moves backward along the video time axis 0.5 seconds.
Last	Move to the ending point of the video segment.
Time Display Part	Indicator of the point in the video where slide bar is indicating.
Left trim	Button "Marks in" the starting point of the video segment being edited.
Right trim	Button "Marks out" the end point of the video segment being edited.
Erase	Removes any video trimming and assigns the whole video segment for editing.
Filter display box	Drop-down list box showing all filters currently available for application to the video segment.
Add filter	Button used to add new filter to the Filter Display Box.
Delete filter	Button used to delete filter(s) from those displayed in the Filter Display Box.
Adjust filter	Button used to execute the Filter Adjustment Dialog window, to adjust the level of the filtering being applied to the video segment

There are four output file format categories represented by the four tabs in the Options Dialog Box (MPEG-1, MPEG-2, WMV and AVI). Each category can be viewed by clicking on the category tab.

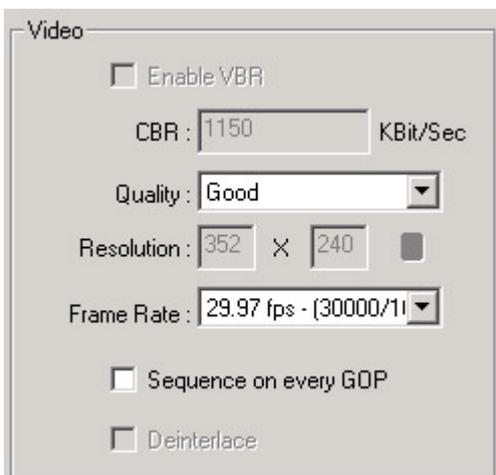

a. The following figure shows the MPEG 1 menu.

The MPEG-1 menu includes 7 profiles from which to choose. Each profile displays the video bit rate of that format.

Following lists are explanations for profiles.

Auto	Calculate most appropriate data rate in consideration of screen size of the translating file
Internet low band	256Kbps, QCIF(160*120), 23.976frame/sec, QCIF(Quarter CIF)
Half Screen Intranet	384Kbps, QCIF(160*120), 23.976frame/sec, QCIF
Full Screen Intranet	768Kbps, CIF(320*240), 23.976frame/sec, CIF(Common Intermediate Format)
PAL	Create MPEG file suitable for NTSC of American color TV broadcastings
NTSC	Create MPEG file suitable for PAL of European color TV broadcastings
Video CD	Create MPEG file suitable for manufacturing video CD

An inverse relationship exists between bit rate (information saved) and compression: as the bit rate increases, the screen quality gets clearer, but the compression rate drops. If "automatic adjustment" is selected, the application will pick the optimize the bit rate with respect to screen size. (Note: MPEG 1 & 2 formats have "variable bit rates", that is, bit rates that can be adjusted.) Selecting "Enable Variable Bit Rate" results in the application automatically compressing the video while maintaining satisfactory screen quality within the maximum bit rate. Adjustments for screen quality, screen size and frame rate can be manually set.

Enable VBR	When selected, it transcode file to VBR (Variable Bit Rate) type.
Bit rate	Display video bit rate per second and bit rate of selected profile. Higher bit rates result in better screen quality, but less compression.
Quality	Select translation method. Screen quality preferred, standard, translation speed preferred and fastest translation are provided.
Resolution	You can set screen size of MPEG file you are creating.
Frame rate	Set number of frames per second.
Sequence on every GOP	This option allows you to output Sequence header for each GOP of MPEG file.
Deinterlace	This option is used to delete horizontal line pattern of input file.

b. Following figure shows MPEG 2 Menu.

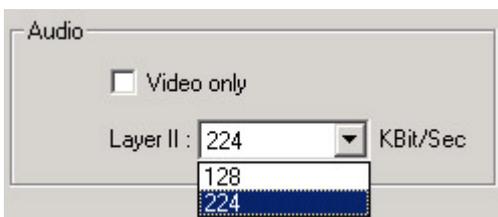

Seven MPEG 2 profiles with corresponding levels of picture quality are available. Industry standard MPEG 2 SVCD and DVD profiles are included. Variable bit rate overrides can be manually selected.

MPEG 2 Profiles and Explanations:

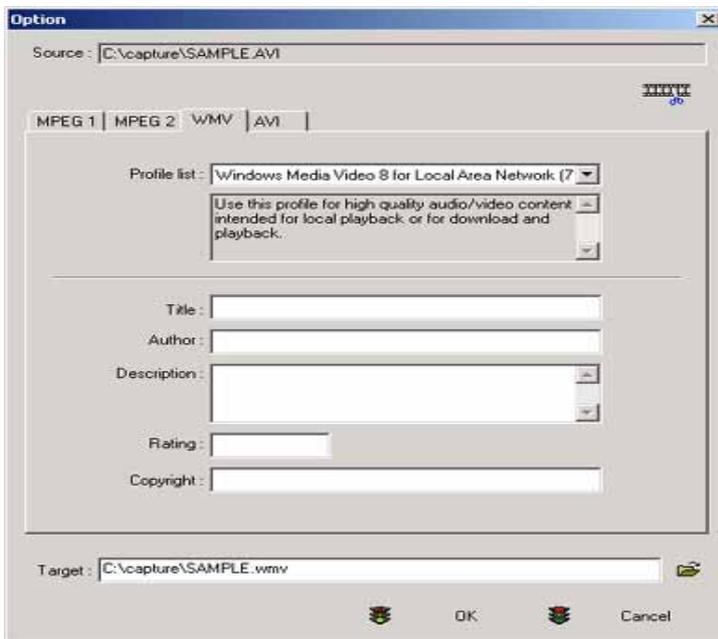

HP@H14	80Mbps, 1440*1152 (High Profile at High-1440)
HP@ML	20Mbps, 720*576
MP@HL	80Mbps, 1920*1152 (Main Profile at Main Level)
MP@H14	60Mbps, 1440*1152
DVD	Create MPEG file suitable for creating DVD. Default 6Mbps
MP@LL	4Mbps (Main Profile at Low Level)
SVCD	Create MPEG file suitable for creating SVCD. 2.5Mbps

MPEG 1 & 2 profiles create audio files that are MPEG 1, Layer 2 in specification with bit rate choices of 128 Kbit/sec and 224Kbit/sec.

Video only : When selected, Encoder 5.0 transcodes only video and doesn't transcode audio.

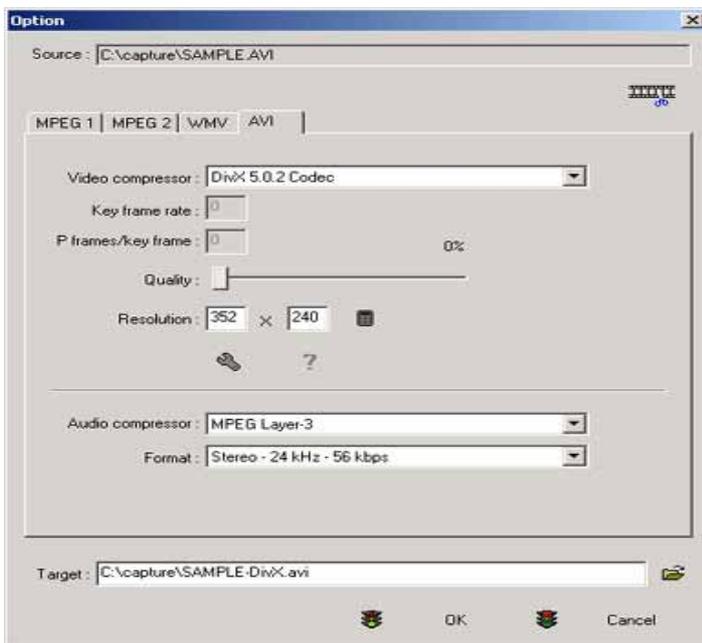

c. Following figure shows WMV Menu.

This option window is used when creating Windows Media Version 9 files. The WMV window offers several video formats from which to choose. It also makes it possible to change the name the output file, list the author, provide a description/explanation, provide a video rating and other copyright information.

Profile list	Offers a list of video output formats from which to choose. The edit box located below the Profile List display details information about the selected profile (if Windows Media Format 9 Series Runtime is installed).
Title	Select media title.
Author	Input name of author.
Description	You can input explanation for media file. Maximum of 255 characters are allowed to input.
Rating	Display class.
Copyright	Display copyright holder.

d. Following figure shows AVI Menu

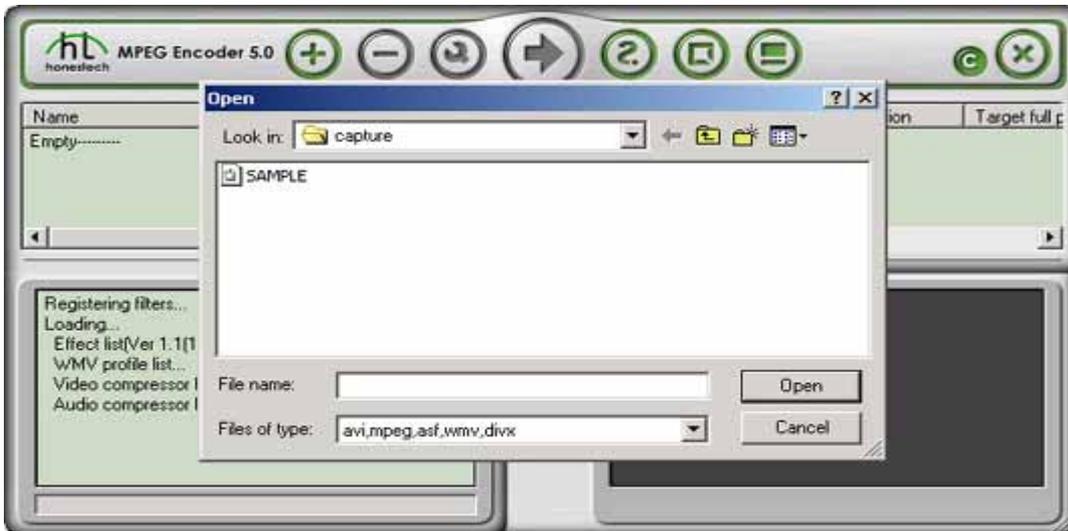

Video Compressor		Select the correct codec to compress/change the video file to the desired output format. (Codecs are software modules used to transcode video files from one format to another.) Some codecs permit manual selection of video variables
	Key frame rate	Sets the cycle of the standard frame. The unit of measure for the AVI video is the standard frame. If the value gets higher, screen quality of created file gets lower and it requires longer searching time when you play the file after creation.
	P frame rate / key frame	Set number of reference frame displayed between standard frames. No value greater than standard frame may be used.
	Quality	Set video quality. You can select within 0~100%. 100% means the best quality provided by the compressor. (Note: as video quality increases, the ability of the compressor to shrink the file size decreases.)
	Resolution	Allows for manual selection of screen size.

When manual variable changes cannot be made, the automatic compressor option is activated.

4.6. Practice Streaming Video Translation

honestech MPEG Encoder 5.0 transcodes multimedia files between video formats. For multimedia files to be transcoded using Encoder 5.0, they must be able to be played with Windows Media Player. File formats that can be transcoded are: AVI, DV-AVI, MPEG 1, MPEG 2, ASF, WMV, DivX, DAT, and AVS.

To add a multimedia file to be transcoded, click on the "+" or "Add" button. This will open the "Browse" dialog box. Browse to the directory/file wanted and click on "Open". (Another method of adding files to the Batch Process Display Window is to simply highlight a file, then drag and drop it into the Batch Process Display Window.)

Once the multimedia file is added to the Batch Process Display Window, the Option Selection Dialog Box appears. This begins the process of selecting the output format for the transcoder to create. Chose among four categories of formats: MPEG 1, MPEG 2, WMV and AVI; Category tabs appear at the top of the window. After selecting a format category, chose a specific video format (and detailed options if necessary). For more information, refer to the Translation Option Dialog Session.

The output file will be created in the same directory as the original file unless a different path is manually chosen. It will also maintain the original video file name and add a file extension matching the video format of the output type selected. The file name can also be manually changed.

Once the output video format and options are selected and the "OK" button is clicked, the file will appear in the Batch Process Display Window.

Name	Status	Video	Audio	Fps	Size	Duration	Target full p
SAMPLE.AVI	Skip	352x240, 16bpp	stereo,44.100K...	29.97	16.67MB	19 sec	C:\capture\

The Batch Process Display Window shows three states of process in the Status column.

1. Waiting means that the media file displayed is queued for transcoding (compression and/or translation). The transcoding of video files in the "Waiting" state begins when the Encoding button is clicked.
2. Exclusion means that transcoding of that file will not occur.
3. Done means that the transcoding (compression and/or translation) is successfully completed.

To change a file's status between Waiting and Exclusion (and vice versa), double click on the file line. The Waiting state will change to an Exclusion state and be reported as "Skip". Similarly, a file with a "Skip" status when double-clicked, will change to "Waiting."

Following figure shows the status Exclusion that changed status of previously added at above by double clicking with mouse.

Name	Status	Video	Audio	Fps	Size	Duration	Target full p
SAMPLE.AVI	Skip	352x240, 16bpp	stereo,44.100K...	29.97	16.67MB	19 sec	C:\capture\

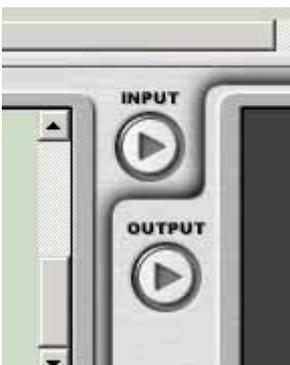

Although you push Encoding button in this status, it will not execute compression and translation process. Change the status to [Waiting] by double clicking with mouse and push Encoding button() to execute compression and translation process.

During Transcoding, the Status column changes to display the percent of progress accomplished. Also, once the transcoding process has begun, the (right arrow) Encoding button changes to a Stop button. If the Stop button is clicked-on during transcoding, the process will stop.

Once the transcoding process completes successfully, the status will change to Done. To transcode the same file again - for example, with an option change - double click on the file in the Batch Process Display Window and the Status will change to Waiting. To change the options again, highlight the file with a single mouse click and then click on the Option or Edit button to execute the Option Selection Dialog box.

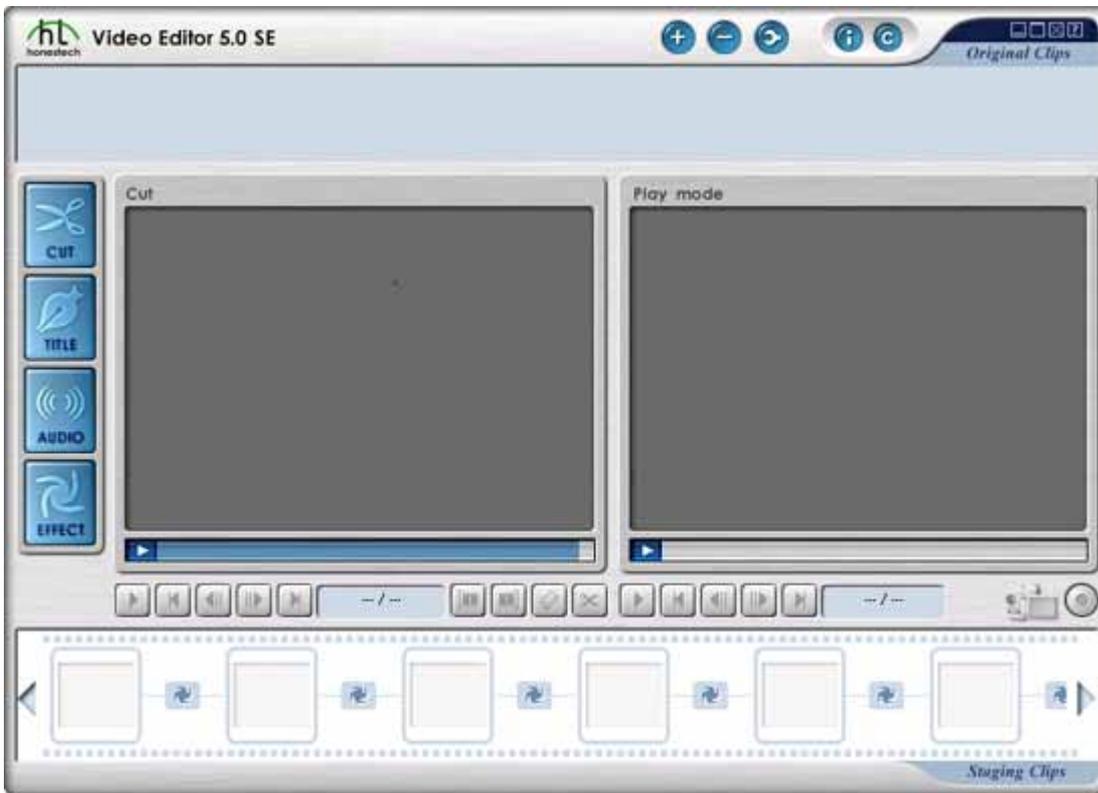

To view the transcoded output video file, highlight the video file and click-on the Output Play button

5.Video Editor

Screen Layout and Explanation

Click on **an area or items below** to get full explanation.

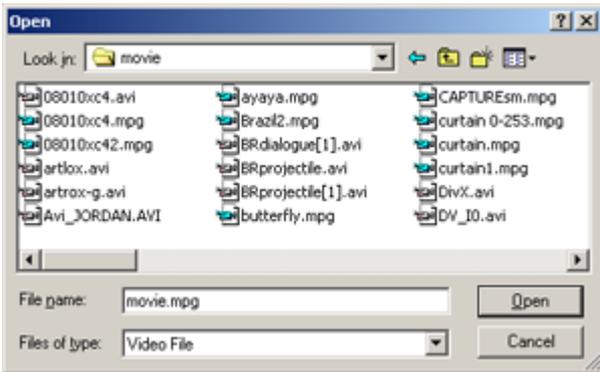

honestech Video Editor's screen has following areas.

- Menu Area: file open, file/video clip delete, video property, change skin color, minimize, maximize, close and help.
- Display Area: play original video clips, play edited video clips (preview), display saving progress information.
- Video Clip Staging Area: Original Clips, Staging Clips.
- Frame Edit Area: mark frame range, sequence arrangement, merge multiple frames into one video.
- Title Edit Area: add title, font style, size, color, movement (straight line, curve line)
- Audio Edit Area: add audio and create sound effect
- Special Effect Edit Area: use Color Effect, Filter Effect, Transition Effect, Transition In Effect, Transition Out Effect, Noise Reduction Filter

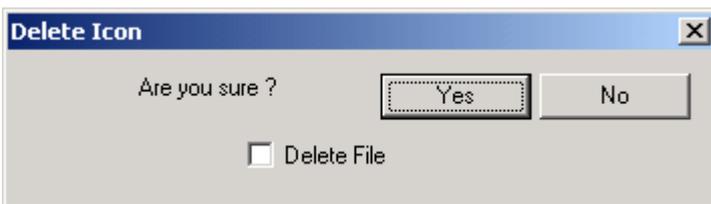

5.1. Menu Area

: File open

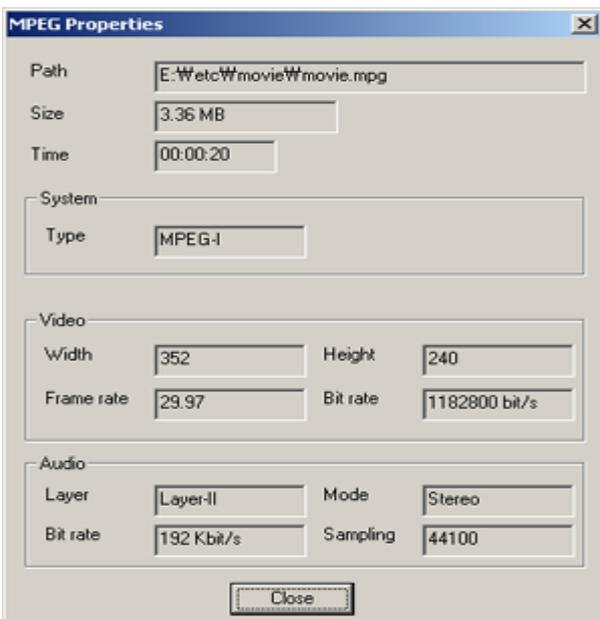

- Support MPEG-1, 2 system file(Video and Audio), AVI(DV-AVI).
- Select a file and click Ok button.

: Clip/File delete

- Delete clips registered in Original/Staging Clips.
- Actual file on a hard disk is deleted when "Delete File" is checked.

: Property of Clip/File

- File path, size and play time.
- File System type
- Video information (screen size, frame rate, bit rate)
- Audio information (layer, mode, bit rate, sampling frequency)

: screen color change

: Minimize

: Maximize

: Previous screen size

: Close program

5.2. Video Display Area

Original Video Display Window

- Displays videos in Original Clips(Double Click or Drag and Drop)
- Videos in Staging Clips cannot be displayed in this window.
- In Title editing mode, Title can be edited in this window.
- In Audio editing mode, it displays registered audio files.
- In Special Effect mode, it displays all available filters.
- Displays the progress information when final video is created.

Edited Video Display Window

- Displays videos in Staging Clips(Double Click or Drag and Drop)
- Videos in Original Clips can be displayed in this window.
- Preview function displays edited video in this window.

5.2.1 Edit Buttons

:Play back video clip. Button changes to Pause when clicked

:Pause playing back. Button changes to Play when clicked

: Move to the beginning.

: Move to the previous frame.

: Move to the next frame.

: Move to the end.

: Display the total number of frames and current frame position. When clicked, it displays frame information in terms of time.

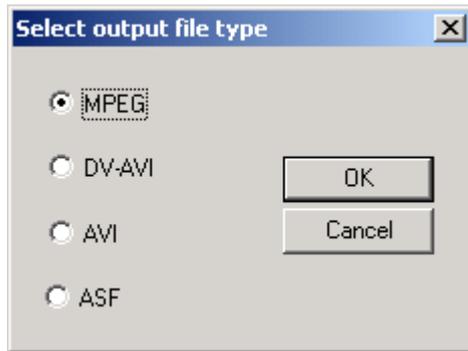

: Frame Mode

: Time Mode

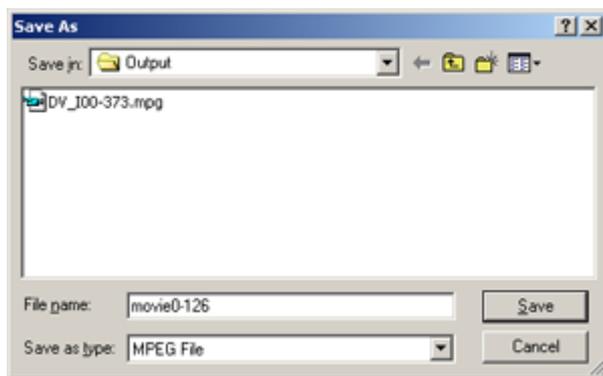

5.2.2. Preview and Save Button

1.  (Preview Button) : Merges and plays back video clips in the Staging Clips. Video is played back in the Play mode window.
2.  (Save Button) : Merges and saves video clips in Staging Clips area into a single permanent video file. Clicking this button displays the following dialog box so that users can select

output video format.

3. Select output video format, specify file name and click "Save" button.

4. Another window will show up to specify video setting information according to the selected video format.

- AVI Format
- DV-AVI Format
- MPEG Format
- Window Media(WMV) Format

5.3. Frame Edit Mode

Frame Range Selection for Editing

- Specify frame range
- To add an entire video clip, drag the clip from the Original Clips area and drop it in the Staging Clips area.
- To add portions of a video clip, drag the clip from the Original Clips area and drop it in the left preview window. Then using the Mark-in/Mark-out buttons, cut the portion of the video clip to be edited and then click the  button to transfer the clip to the Staging Clips area.
- Users can repeat the above steps to add multiple video frames.

Video Frames Editing and Saving

Adding Video Clip

- Use the  button in the menu area to browse and select video clips to add to the Original Clips area.
- Drag and Drop video files to the Original Clips area.
- Double click on added video clips in Original Clips area or Drag and Drop them to Original Video Display Window to view and select frames for further editing.

Selecting frame ranges for video editing Click Mark-in to specify the beginning of a clip and

Mark-out to set the end of the clip. Next, click on the  button to move the clips from the Auto Edit window to the Staging Clips area.

Editing video frames

- Select video frames in Staging Clips area.
- Users can rearrange the sequence of videos.
- Users can repeat the same scene by putting the same video frames multiple times.
- Users can delete sections of video they do not want.

5.Minimize, Close, Help

: Minimize HT Burn DVD window.

: Close HT Burn DVD.

: Open HT Burn DVD help.

6.3. Digital Versatile Disk / Video CD / Super VCD Spec

- Digital Versatile Disk(DVD) Spec - NTSC :

Size : MPEG2 720 X 480 pixels

Video bit rate : Up to 9.8 Mbit/sec

Frame rate : 29.97 frames/sec

Audio : LPCM, MPEG-1 Layer2

- PAL

Size : MPEG2 720 X 576 pixels

Video bit rate : Up to 9.8 Mbit/sec

Frame rate : 25.00 frames/sec

Audio : LPCM, MPEG-1 Layer2

- Video CD(VCD) Spec - MPEG1 352 X 240 NTSC

Size : MPEG1 352 X 240 pixels

Video bit rate : 1150 kbit/sec

Frame rate : 29.97 frames/sec

Audio : 224 kbit/sec MPEG-1 Layer2

- MPEG1 352 X 288 PAL

Size : MPEG1 352 X 288 pixels

Video bit rate : 1150 kbit/sec

Frame rate : 25.00 frames/sec

Audio : 224 kbit/sec MPEG-1 Layer2

- Super VCD(SVCD) Spec - NTSC

Size : MPEG2 480 X 480 pixels

Video bit rate : max 2524 kbit/sec MPEG-2 (if the audio is in 224 kbit/s), audio + video
bitrate max bitrate is 2748 kbit/s.

Frame rate : 25.00 frames/sec

Audio : from 32 - 384 kbit/sec MPEG-1 Layer2

- PAL

Size : MPEG2 480 x 576 pixels

Video bit rate : max 2524 kbit/sec MPEG-2 (if the audio is in 224 kbit/s), audio + video
bitrate max bitrate is 2748 kbit/s.

Frame rate : 25.00 frames/sec

Audio : from 32 - 384 kbit/sec MPEG-1 Layer2

Q&A :

Question 1--- After recorded files, sometime the audio & video were not sync when playback. Why?

Answer 1--- Firstly we suggested users to check if your system performance cannot run this application well (please check the **system requirement** again in this manual), because this product is based on software compression of A/V. Or please change the record setting to lower level in application software settings; it will help to solve the sync problem. Besides, if you use Windows™ 2000 for your operating system, please update to Service Pack 4 to increase the supporting of multimedia performance.

Question 2--- Did this product support Windows™ NT?

Answer 2--- Sorry, this product only supports Windows™ 2000 & Windows™ XP. And please be sure about your operating system can update to latest service packages.
