**What is the button on the side of my modem/router used for?**

## What is the button on the side of my modem router used for?

This button is the Wi-Fi Protected Setup button. **Wi-Fi Protected Setup (WPS)** is a simple way to connect to a wireless network without much configuration. With WPS, it will automatically configure a wireless network with a network name (**SSID**), WPA security key and authentication. WPS is designed to support various Wi-Fi certified 802.11 products.
