Installation Guide using CD ROM for DSL modem routers DSL-2740B (Rev F1) and DSL-2750B (Rev B1)

This document details how to configure the DSL-2740B and DSL-2750B using the supplied Setup Disc.

There are several ways to configure your modem: using a Setup Wizard available on the Setup Disk supplied with your modem, or manually configuring the modem using your Internet Browser, allowing for more flexibility in your configuration.

If your modem has been previously configured, running the Setup Disk will overwrite the previous configuration with the new settings you provide during the setup.

Configuring your modem using the supplied Setup Disk

1. Insert the CD into your computer and the install wizard should start automatically. Click on [START] button

If the Install wizard does not start up automatically, you can start it up manually by double clicking on the **DSL-2740B.exe** file in the CD-ROM Drive

2. Select [First Installation] and click on [NEXT] button.

3. Follow the instructions to switch on the modem and click on [NEXT] button.

4. Connect the modem to your computer via an Ethernet cable and click on [NEXT] button.

Well done! Your router is	now up and running		
	You are now connected to the Internet via a wired connection. To access the Internet wirelessly, your computer needs to join the wireless network that you just set up. The next screen will give you some instructions on how to do this.		
If at a later stage you need to change any settings, your Internet Service Provider information or enable <u>Parental Control</u> , you can do so by using the <u>Advanced User Interface</u> , just click on the link at the bottom of this page. You will find all of the information you need to log on in the Quick Installation Guide that came in the box with your router.			
If you just want to start browsing right away, please	simply click here:
