After installing the Utility and Card per instructions with the 2.36 drivers, you will need to install the Aegis software to use WPA.

Windows 98 Second Edition/ME

Step 1 Download and extract the WPA supplicant for the 2.36 driver.

Step 2 Double-click the Aegisl 2.exe file to install the files necessary to support WPA.

Step 3 You should see **Protocol Binding Completed Successfully**. Close the Utility by clicking the **X** in the upper-right of the window and restart your computer. After rebooting, you should now be able to use the WPA feature with your DWL-G520/G650 and your WPA-enabled Access Point/wireless router.
