

D-Link

Firmware Version: V2.00.023 Prom Code Version: V1.10.009 Published: 2013/9/30

These release notes include important information about D-Link DXS-3600 Series firmware revisions. Please verify that these release notes are correct for your switch:

- If you are installing a new switch, please check the hardware version on the device label; make sure that your switch meets the system requirement of this firmware version. Please refer to <u>Revision History and System Requirement</u> for detailed firmware and hardware matrix.
- If the switch is powered on, you can check the hardware version by typing "show system" command or by checking the device information page on the web graphic user interface.
- If you plan to upgrade to the new firmware release, please refer to the <u>Upgrade</u> <u>Instructions</u>:

D-Link switches support firmware upgrade via TFTP server. You can download the firmware from D-Link web site http://tsd.dlink.com.tw, and copy the downloaded firmware to the TFTP server folder. Please make sure that the TFTP server is accessible from the switch via networks.

For more detailed information regarding DXS-3600 Series switch products, please refer to <u>Related Documentation</u>.

You can also download the switch firmware, D-View modules and technical documentation from http://tsd.dlink.com.tw.

Revision History and System Requirement

Firmware Version	Date	Model	Hardware Version
Runtime: v2.00.023	2012/0/20	DXS-3600-16S	D1
PROM: v1.10.009	2013/9/30	DXS-3600-32S	B1
Runtime: v1.10.023	2012/0/21	DXS-3600-16S	D1
PROM: v1.10.007	2012/8/31	DXS-3600-32S	B1
Runtime: v1.00.024	2011/12/26		A 1
PROM: v1.00.007	2011/12/20	DXS-3600-32S	A1

Firmware Version	Supported module
Runtime: v1.10.023 and later Prom: v1.10.007 and later	DXS-3600-EM-8TDXS-3600-EM-8XSDXS-3600-EM-4QXSDXS-3600-EM-4XTDXS-3600-PWR-FBDXS-3600-FAN-FBDXS-3600-PWR-BFDXS-3600-FAN-BFDXS-3600-FAN-BF
Runtime: v1.00.024 Prom: v1.00.007	DXS-3600-PWR-FB DXS-3600-FAN-FB DXS-3600-PWR-BF DXS-3600-FAN-BF

Upgrade Instructions:

Note1: EI & SI features are all included in the firmware. While upgrading, system will automatically distinguish it and enable the associated features only. Note2: v1.10.023 and later versions only work for B1 hardware version and NOT backward compatible to A1 hardware version. The v1.00.024 only works for A1 hardware version and CANNOT use for B1 hardware version. Please be caution when upgrading the firmware.

D-Link switches support firmware upgrade via TFTP server. You can download the firmware from D-Link web site <u>http://tsd.dlink.com.tw</u>, and copy the downloaded firmware to the TFTP server folder. Please make sure that the TFTP server is accessible from the switch via networks.

Upgrade using CLI (serial port)

Connect a workstation to the switch console port and run any terminal program that can emulate a VT-100 terminal. The switch serial port default settings are as follows:

- Baud rate: **115200**
- Data bits: 8
- Parity: None
- Stop bits: 1

The switch will prompt the user to enter his/her username and password. It should be noted that upon the initial connection, there is no username and password by default.

To upgrade the switch firmware, execute the following commands:

In this example TFTP server address is 192.168.0.100, firmware file name is R110B25.had

DXS-3600-16S>enable DXS-3600-16S#copy tftp: flash Address of remote host []? 192.168.0.100 Source filename []? R110B25.had Destination filename []? R110B25.had Accessing tftp://192.168.0.100/R110B25.had... Transmission start... Transmission finished, file length 8437308 bytes. Please wait, programming flash...... Done.

DXS-3600-16S#

5 2012-11-28 10:28:13 INFO(6) Firmware upgraded by console was successfully (Username: Anonymous)

DXS-3600-16S#dir Directory of flash: 1 -rw- 8437308 2012/11/28 10:27:54 R110B25.had 2 -rw- 8137216 2012/07/19 16:50:17 23.had 3 -rw- 118294 2012/08/29 11:05:06 test.cfg 4 -rw- 156 2012/10/16 15:31:51 config.cfg 5 d--- 0 2012/11/28 10:13:43 system 1048064 KB total (1030692 KB free)

DXS-3600-16S#config t DXS-3600-16S(config)#boot system flash R110B25.had DXS-3600-16S(config)#ex DXS-3600-16S#show bootup Bootup Firmware : /c:/R110B25.had Bootup Configuration : /c:/config.cfg DXS-3600-16S#reboot Are you sure you want to proceed with the system reboot?(y/n) y

Upgrading by using Web-UI

- 1. Connect a workstation installed with java SE runtime environment to management port of the device and also connect console cable to switch's console port.
- By default, the management port will contain an IP address, 192.168.0.1/24. Be sure to use CLI to create an administrator's account and associated password first before login the switch via Web UI.

Example:

dlinklareen

Create an administrator "admin" with privilege 15 and password "admin". DXS-3600-16S(config)#username admin privilege 15 DXS-3600-16S(config)#username admin password admin

- 3. Open the web browser from the workstation and enter the IP address of the switch. The switch's default IP address is 192.168.0.1
- 4. Enter administrator's username and password when prompted. Enter the user name and

password you just created. Here is "admin" with password "admin" as an example.

- 5. To update switch's firmware or configuration file, select Management from the banner and input associated information in "Download Firmware" function block.
- 6. Enter the destination path and the desired file name.
- 7. Click "Browse" button and enter the name of the firmware file located on the source computer.
- 8. Click "Download" button.

ownload&Upload	
Download Firmware:	
Destination File c:/runtime.had	
Source File Desktop\DXS-3600-32S-R1.0	0 Browse
	Download

9. Wait until the status displays "Success".

ownload&Upload	
Download Firmware:	
Destination File c:/runtime.had	1
Source File	Browse
	Download
¥	
Success.	

Note: Web management does not support selecting the boot up image which uses for next reboot or reboot device function.

New Features

dlink

Firmware Version	New Features
V2.00.023	 Support Physical Stacking DXS-3600-32S with DXS-3600-EM-Stack stacking module and DEM-CB50CXP, the 120G CXP Direct Attach Cable, can support 480G stacking bandwidth DXS-3600-16S/32S with DXS-3600-EM-4QXS, the 40G expansion module and DEM-CB100QXS/300QXS, the 40G QSFP+ Direct Attach Cable, can support 160G stacking bandwidth Support Virtual Stacking The Layer 2 function supports following new features: Loopback Detection (LBD)
 roon	

- L2 Protocol Tunneling
- Ethernet Ring Protection Switching (ERPS)
- Limited IP Multicast (IGMP Snooping Filter)
- Proxy Reporting
- MLD Snooping
- Multicast VLAN
- 4 The VLAN function supports following new features
 - Private VLAN
 - Super VLAN
 - VLAN Translation
- 5 Support Explicit Congestion Notification (ECN)
- 6 The ACL function supports following new features
 - ACL Statistics
 - CPU Interface Filtering
- 7 The Security function supports following new features
 - IPv6 SSH
 - SSL v1/v2/v3
 - IPv4/v6 SSL access
 - D-Link Safeguard Engine
 - BPDU Attack Protection
 - ARP Spoofing Prevention
 - DHCP Snooping
 - DHCPv6 Guard
 - Route Advertisement (RA) Guard
 - IPv6 Snooping which contains following features
 - DHCPv6 Snooping
 - IPv6 ND Snooping
 - IPv6 Source Guard
 - IPv6 Neighbor Discovery (ND) Inspection
 - DHCP Server Screening
- 8 The AAA function supports following new features
 - Web-based Access Control (WAC)
 - MAC-based Access Control (MAC)
 - Microsoft[®] Network Access Protection (NAP)

6

- Compound Authentication
- Authentication Database Failover
- 9 The L3 function supports following new features
 - Gratuitous ARP
 - ARP Proxy

dlinklareen

Loopback Interface

- Null Interface
- RIPng
- OSPFv3
- RIPng and OSPFv3 are able to configure the Route Preference parameter
- Static Route supports IPv6 address
- Default Route supports IPv6 secondary route and Route Redistribution
- Route Redistribution supports IPv6 static route, RIPng and OSPFv3
- IPv6 Tunneling
- 10 The Green function supports following new features
 - Green v1.0 supports power saving by link status and cable length
 - Green v3.0 supports power saving by shutting down port or main chipsets
 - Energy Efficient Ethernet (EEE)
- 11 The Management function supports following new features
 - Web UI supports IPv6 address
 - IPv6 Telnet Server and Telnet Client
 - IPv6 TFTP and FTP client
 - Secure FTP (SFTP) server
 - Remote Copy Protocol (RCP)
 - SNMP over IPv6
 - Inconsistency airflow notification
 - IPv6 log server
 - Simple Mail Transfer Protocol (SMTP)
 - RMONv1 & RMONv2 support getting information through SNMPv6
 - sFlow
 - IPv4 BootP client
 - DHCP client supports DHCPv6 client and option 12
 - DHCP Auto Configuration
 - IPv6 Stateless Address Autoconfiguration (SLAAC)
 - IPv6 DHCP Server
 - DHCP Server supports option 60, 61, 82
 - DHCPv6 Relay Agent
 - Trusted Host

dlinkareen

- IPv6 Path MTU Discovery
- IPv6 Ping and Traceroute
- Microsfot[®] Network Load Balancing (NLB)
- DNS Relay supports IPv6 and AAAA record
- IPv6 Neighbor Discovery Protocol
- When errors are detected in Management Port, switch is able to send traps or keep logs
- 12 The OAM function supports following new features

		Cable Diagnostic
		• 802.3ah Ethernet Link OAM
		Connectivity Fault Management (CFM)
		• Y.1731
		 Optical Transceiver Digital Diagnostic Monitoring (DDM)
		13 The L3 Multicasting function supports following new features
		IGMP Source Specific Mapping (SSM)
		• IGMP/MLD Proxy
		 IPv6 PIM-Sparse Mode (SM)
		 PIM-Source Specific Multicast (PIM-SSM)
		 Multicast Listener Discovery (MLD) v1/v2
		14 Support IPv6 Core Ready logo phase II certification
		15 Support IP-MAC-Port Binding which is composed by following functions:
		 ARP Inspection
		• IP Source Guard
		 DHCP Snooping
		 DHCPv6 Guard
		 Route Advertisement (RA) Guard
		 IPv6 Snooping
		 IPv6 Source Guard
		 IPv6 Neighbor Discovery (ND) Inspection
		1 Support DXS-3600-16S/32S B1 hardware version
		2 Support Data Center Bridging (DCB) features which include
		 802.1Qaz Enhanced Transmission Selection (ETS)
		 802.1Qbb Priority-based Flow Control (PFC)
		 802.1Qau Congestion Notification (QCN)
		3 Support below MPLS features
		MPLS Label-Forwarding
		 MPLS QoS
		 MPLS Ping & Trace Route
	V1.10.023	 LDP
		 MPLS LSP Trigger Filter
		 VPWS
		 VPLS
		 L2 Protocol Tunneling Through PW(pseudowire)
		 Pseudowire redundancy
		4 Support below L3 VPN features
		 MPLS/BGP L3 VPN
		 VRF-Lite
dia 1	1000	
dlinkig	reen	

 MP-BGP Support VRF Aware Application which includes Socket API Telnet DHCP Server/Relay Ping Trace route FTP, TFTP SNMP 		
 Socket API Telnet DHCP Server/Relay Ping Trace route FTP, TFTP 		• MP-BGP
 Telnet DHCP Server/Relay Ping Trace route FTP, TFTP 		5 Support VRF Aware Application which includes
 DHCP Server/Relay Ping Trace route FTP, TFTP 		Socket API
PingTrace routeFTP, TFTP		• Telnet
Trace routeFTP, TFTP		DHCP Server/Relay
• FTP, TFTP		• Ping
		Trace route
		• FTP, TFTP
		• SNMP
 Syslog 		• Syslog
• AAA		• AAA
• TACAS+		• TACAS+
RADIUS Servers		RADIUS Servers
V1.00.024 First release, please refer to datasheet and manual for detail function support	V1.00.024	First release, please refer to datasheet and manual for detail function support

Changes of MIB & D-View Module

D-Link

The new features of MIB file are also included in the corresponding D-View module. Please download the D-View module on http://tsd.dlink.com.tw. For detailed changes of MIB content, please refer to the modification history in each MIB file.

Firmware Version	MIB File	New Features
V2.00.023	None	
	MPLS MIB	New MIB to support MPLS features
V1.10.023	L3 VPN MIB	New MIB to support L3 VPN features
	LLDP DCBX MIB	New MIB to support Data Center Bridging Exchange Protocol (DCBX)
	IP MIB	
	LED-DXS-3600-16S	
	General-mgmt	Add new table "swGenExpansionModuleMgmtTable" to General-mgmt MIB to support expansion modules
V1.00.024	First release, please refer to	datasheet for detail MIB support

Changes of Command Line Interface

D-Link

The section below only shows command line changes that may bring backward compatibility issues with configuration settings for previous version of firmware. Any new feature commands that do not have backward compatibility issues are not included in the below section.

Note: When upgrading the firmware from version R1.10 to R2.00; if configuration file is saved in the flash first and then processes the upgrade procedure, the switch will automatically convert the CLI commands to new format.

Firmware Version	Changes
	 AAA (Authentication, Authorization and Accounting) commands aaa changes to aaa anew-model aaa authentication network default method1 [method2] changes to aaa authentication dot1x default METHOD1 [METHOD2] aaa authorization exec {default list-name} method1 [method2] is replaced by aaa authorization console is removed as when user passes the authentication, the console will accept the predefined authorization level which is configured in AAA server authorization exec {default list-name} is replaced by authorization exec {default list-name} is replaced by authorization exec {default list-name} aaa local authentication login {default list-name} aaa local authentication attempts max-attempts is replaced by aaa local authentication lockout-time lockout-time is removed; the switch's lockout time is 60 seconds by default aaa authorization network default method1 [method2] is replaced by aaa authorization network default method1 [method2] is replaced by aaa authentication [dot1x mac-auth]jwac web-auth] default method1 [method2] show aaa server group is replaced by show aaa authentication {login enable network} is replaced by show running-configure, for example <i>show running-config all</i> <i>begin AAA</i> show aaa authorization {exec network} is removed as authorization {exec network}
dlinkigreen	

•	hosts will be authorized automatically after successfully authenticated show aaa accounting {exec network}
	is replaced by
•	show running-configure, for example <i>show running-config all</i> <i>begin AAA</i> show aaa application [{line http network}]
	is replaced by
•	show running-configure, for example <i>show running-config all</i> <i>begin AAA</i> following commands
	- radius-server key text-string
	- tacacs-server key string
	- radius-server retransmit retries
	- radius-server timeout seconds
	- tacacs-server timeout seconds
	are replaced by
	radius-server host
•	show radius-server configuration
·	is replaced by
	show running-configure, for example <i>show running-config all</i> <i>begin AAA</i>
•	show tacacs-server configuration
	is replaced by
	show running-configure, for example <i>show running-config all</i> <i>begin AAA</i>
2. Ne	twork Access Authentication commands
•	network-access guest-vlan VLAN-ID
	changes to
	authentication guest-vlan VLAN-ID
•	<pre>network-access authentication-mode {port-based host-based} changes to</pre>
	authentication host-mode {multi-host multi-auth [vlan VLAN-ID [, -]] }
•	dot1x timeout quiet-period <sec 0-65535=""> changes to</sec>
	authentication timer restart <seconds 1-65535=""></seconds>
٠	dot1x timeout reauth-period <sec 1-65535=""> changes to</sec>
	authentication timer reauthentication <seconds 1-65535=""></seconds>
•	dot1x reauthentication
	changes to
	authentication periodic
•	dot1x system-max-user <int 1-4096=""></int>
	changes to
	authentication max users <number 1-4096=""></number>
•	dot1x port-max-user <int 1-4096=""></int>
	changes to
	authentication max users <number 1-4096=""></number>

dlinkigreen

 show network-access guest-vlan is replaced by show running-configure, for example Switch#show running-config all | begin COMP **# COMPOUND AUTHENTICATION** configure terminal interface ethernet 2/0/1 authentication guest-vlan 1 end show network-access auth-configure [interface <interface-id>] is replaced by show running-configure, for example *show running-configue all* | *begin* COMP 3. DoS Prevention commands defense [land | blat | null-scan | xmascan | tcp-synfin | port-less-1024 | ping-death | tiny-frag] enable changes to dos-prevention [all | land | blat | tcp-null-scan | tcp-xmas-scan | tcp-syn-fin tcp-syn-srcport-less-1024 | ping-death | tcp-tiny-frag] show defense changes to show dos-prevention [all | land | blat | tcp-null-scan | tcp-xmas-scan | tcp-syn-fin | tcp-syn-srcport-less-1024 | ping-death | tcp-tiny-frag] 4. Port Security commands switchport port-security [{mac-address <mac-address> [vlan <vlan-id>] | mac-address sticky [<mac-address> [vlan <vlan-id>]]}] changes to switchport port-security [mac-address [permanent]<mac-address> [vlan VLAN-ID]] clear port-security {all | configured | dynamic | sticky} [{address <mac-address> | interface <interface-id>}] changes to clear port-security {all | {address <mac-address> | interface [<interface-id> | <interface-list>]} [vlan VLAN-ID] } 5. DHCP Relay commands ip dhcp relay information option82 changes to ip dhcp relay information option following commands are replaced by "class", "option hex" and "pool" parameters ip dhcp relay option60 ip dhcp relay option60 identifier desc 255 relay ip-address

dlinkareen

		[exact-match partial-match]
		 ip dhcp relay option60 default relay ip-address
		 show ip dhcp relay option60 [identifier desc 255 default]
		- ip dhcp relay option61
		 ip dhcp relay option61 identifier {string desc 255 mac-address
		macaddr} {relay ip-address drop}
		- ip dhcp relay option61 default relay ip-address
		- show ip dhcp relay option61
		6. Traffic Segmentation commands
		 switchport protected unidirectional { tenGigabitEthernet PORTLIST
		gigabitEthernet PORTLIST fortygigabitethernet PORTLIST }
		changes to
		traffic-segmentation forward interface { range Ethernet PORTLIST
		Ethernet PORT }
		7. BPDU Protection commands
		 spanning-tree bpdu-protect { enable disable }
		changes to spanning-tree bpdu-protection { drop block shutdown }
		8. 802.1X commands
		 dot1x reauthentication
		changes to
		dot1x re-authentication
		 dot1x re-authenticate { interface <interface-id> mac-address</interface-id>
		<mac-address> } in Global Configuration Mode</mac-address>
		changes to
		dot1x re-authenticate [interface INTERFACE-ID [mac-address
		MAC-ADDRESS]] in Privileged EXEC Mode
		 dot1x initialize { interface <interface-id> mac-address <mac-address> }</mac-address></interface-id>
		in Global Configuration Mode
		changes to
		dot1x initialize [interface INTERFACE-ID [mac-address MAC-ADDRESS]] in Privileged EXEC Mode
		 dot1x system-max-user <int 1-4096=""> changes to</int>
		authentication max users <number 1-4096=""></number>
		 dot1x port-max-user <int 1-4096=""></int>
		is replaced by
		authentication max users <number 1-4096=""></number>
		 remove dot1x system-fwd-pdu command, this version does not support
		configuring global system forwarding PDU capability, only supports per
		interface configuration, for example (config-if)#dot1x forward-pdu
		9. SSH commands
		• ip ssh port <int 1-65535=""></int>
Sallie .		changes to
dlink a	reen	

		ip ssh service-port TCP-PORT 10. Storm Control commands
		 storm-control {broadcast multicast unicast} {pps pps-rise [pps-low]
		level level-rise [level-low]}
		changes to
		<pre>storm-control { {broadcast multicast unicast} level { pps PPS-RISE [PPS-LOW] kbps KBPS-RISE [KBPS-LOW] LEVEL-RISE [LEVEL-LOW] }}</pre>
		 storm-control action { block shutdown drop }
		changes to
		<pre>storm-control action { shutdown drop none } 11.FDB commands</pre>
		 clear mac-address-table filtering [address MAC-ADDR vlan VLAN-ID] and clear mac-address-table static [address MAC-ADDR interface INTERFACE-ID vlan VLAN-ID] commands
		change to no mac-address-table static {all MAC-ADDR vlan VLAN-ID [interface INTERFACE-ID] [, -] }; the static parameter will include both original
		static and filtering parameters
		 mac-address-table filtering MAC-ADD vlan VLAN-ID
		changes to
		mac-address-table static MAC-ADDR vlan VLAN-ID {interface INTERFACE-ID [, -] drop}
		• no mac-address-table filtering MAC-ADD vlan VLAN-ID
		changes to
		no mac-address-table static {all MAC-ADDR vlan VLAN-ID [interface INTERFACE-ID] [, -] }
		 mac-address-table notification [interval SECONDS history-size VALUE]
		changes to
		mac-address-table notification change [interval <i>SECONDS</i> history-size <i>VALUE</i>]
		 snmp trap mac-notification {added removed} changes to
		<pre>snmp trap mac-notification change {added removed}</pre>
		 show mac-address-table notification [interface INTERFACE-ID history] changes to
		show mac-address-table notification change [interface [INTERFACE-ID] history]
		 show mac-address-table count command
		is replaced by other show mac-address-table commands
		- show mac-address-table
		- show mac-address-table dynamic
		- show mac-address-table static
		• show mac-address-table filtering [address MAC-ADDR vlan VLAN-ID]
dlinkia	reen	

	changes to
	show mac-address-table [dynamic static] [address MAC-ADDR interface
	[INTERFACE-ID vlan vlan-id], the filtering parameter is replaced by static 12. LLDP commands
	 Ildp message-tx-hold-multiplier value
	changes to
	lldp hold-multiplier VALUE
	 Ildp reinit-delay seconds changes to
	lldp reinit SECONDS
	 Ildp message-tx-interval seconds changes to
	lldp tx-interval SECONDS
	 Ildp-med fast-start-repeat-count value
	changes to
	lldp fast-count VALUE
	 "Ildp notification" and "Ildp-med notification-topo-change"
	changes to
	lldp [med] notification enable"
	 Ildp-med tlv-select [inventory-management capabilities]
	changes to
	lldp med-tlv-select [capabilities inventory-management]
	 Ildp-dcbx tlv-select [ets-configuration ets-recommendation
	pfc-configuration]
	changes to
	lldp dot1-tlv-select dcbx [ets-configuration ets-recommendation
	pfc-configuration]
	• Ildp-dcbx run
	is removed as when LLDP is enabled, LLDP-DCBX will be enabled
	automatically in this version
	 Ildp notification-interval seconds
	is removed; the notification interval will be 5 seconds by default.
	 show Ildp statistics
	changes to
	show Ildp traffic
	 show lldp statistics interface interface-id [, -]
	changes to
	show lldp traffic interface INTERFACE-ID [, -]
	 show lldp local interface interface-id [, -] {brief normal detail}
	changes to
	show lldp local interface INTERFACE-ID [, -] [brief detail]
	 show IIdp remote interface interface-id [, -] {brief normal detail}
	changes to
dlinkigreen	

show lldp neighbors interface INTERFACE-ID [, | -] [brief | detail]

- The following original show commands for LLDP, LLDP-MED and LLDP-DCBX
 - show IIdp-med
 - show lldp-med interface interface-id [, | -]
 - show lldp-med local interface interface-id [, | -]
 - show lldp-med remote interface interface-id [, | -]
 - show lldp-dcbx interface INTERFACE-ID
 - show lldp-dcbx local interface INTERFACE-ID
 - show lldp-dcbx remote interface INTERFACE-ID

are combined into following commands

- show IIdp
- show lldp interface INTERFACE-ID
- show lldp local interface INTERFACE-ID
- show lldp neighbors interface INTERFACE-ID
- 13. Syslog commands
 - logging buffered [LEVEL] | [write-delay { SECONDS | INFINITE }] changes to logging buffered [severity {severity-level | severity-NAME} | discriminator

NAME][write-delay {SECONDS | infinite }]

- logging console [LEVEL] changes to logging console [severity {severity-level | severity-NAME}] [discriminator NAME]
- logging source interface INTERFACE-ID changes to logging source-interface INTERFACE-ID
- logging trap LEVEL is replaced by logging server

dlinkareen

- logging facility FACILITY-TYPE is replaced by logging server
- logging on is replaced by logging buffered [severity {severity-level | severity-NAME}] [discriminator NAME][write-delay {SECONDS | infinite }]
- "logging count" and "show logging count" commands are replaced by show logging
- "save log" and "logging file flash" are removed as the log will be automatically saved when rebooting the switch

change to
show channel-group [channel [<value 1-16="">] { detail neighbor} </value>
load-balance sys-id]
22. Interface and IP commands
 interface out-band <int 1-1=""> changes to</int>
interface mgmt 0
• ip domain-lookup
changes to
ip domain lookup
• ip telnet server enable
changes to
ip telnet server
 arp timeout <min 0-65535=""> original command mode was Global</min>
Configuration Mode and changes to Interface Configuration Mode in R2.0
software version 23. Mirror commands
 no monitor session SESSION-NUMBER destination interface INTERFACE-ID
[acl NAME]
is separated to following commands
- no monitor session SESSION-NUMBER destination interface
INTERFACE-ID
- no monitor session SESSION-NUMBER source acl ACCESS-LIST-NAME
• no monitor session all
is replaced by
no monitor session SESSION-NUMBER
 show monitor [session SESSION-NUMBER]
changes to

dlinkigreen

show monitor session [SESSION-NUMBER | remote | local] 24. File System commands Is directory is replaced by dir cp dest {destine_file | directory} sour source_file and cp sour source_file dest {destine_file | directory} are replaced by copy rm filename and del filename are replaced by delete FILE-URL makefs dev devname fs fsname and makefs fs fsname dev devname are replaced by format FILE-SYSTEM [fat32 | fat16] pwd & cd directory are replaced by cd [DIRECTORY-URL] 25. ACL commands • the following commands ip access-list standard {[id|name]} ip access-list extended {[id | name]} mac access-list extended {[id | name]} expert access-list extended {[id | name]} ipv6 access-list name are changed to ip access-list [extended] NAME [NUMBER] mac access-list extended NAME [NUMBER] expert access-list extended NAME [NUMBER] ipv6 access-list [extended] NAME [NUMBER] the NAME of ACL changes to necessary parameter not an optional one • ip access-list resequence {id | name} start-sn inc-sn changes to access-list resequence { NAME | NUMBER } STARTING-SEQUENCE-NUMBER INCREMENT ipv6 traffic-filter name {in | out} changes to ipv6 access-group { NAME | NUMBER } [in|out] match ip address { acl_name | acl_id }+8 changes to

dlinklareen

match ip address { ACL-NAME | ACL-NUMBER }
R2.0 only supports one entry in VLAN sub map

- match mac address { acl_name | acl_id }+8 changes to match mac address { ACL-NAME | ACL-NUMBER } R2.0 only supports one entry in VLAN sub map
- [sn] {permit | deny} {source-mac-address mask | host source-mac-address | any} {destination-mac-address mask | host destination-mac-address | any} [ethernet-type] [cos out [inner in]] changes to

[SEQUENCE-NUMBER] { permit | deny } { any | host SRC-MAC-ADDR | SRC-MAC-ADDR SRC-MAC-WILDCARD} { any | host DST-MAC-ADDR | DST-MAC-ADDR DST-MAC-WILDCARD} [ethernet-type TYPE MASK] [cos VALUE [inner INNER-COS]] [vlan VLAN-ID [inner INNER-VLAN]] [time-range PROFILE-NAME]

[sn] {permit | deny} protocol [vlan out [inner in]] {source source-wildcard | host source | any} {source-mac-address mask | host source-mac-address | any} {destination destination-wildcard | host destination | any} {destination-mac-address mask | host destination-mac-address | any} [precedence precedence] [tos tos] [fragments] [time-range time-range-name]

changes to

dlinklareen

[SEQUENCE-NUMBER]{permit|deny} PROTOCOL { SRC-IP-ADDR SRC-IP-WILDCARD | host SRC-IP-ADDR | any} {SRC-MAC-ADDR SRC-MAC-WILDCARD | host SRC-MAC-ADDR | any} { DST-IP-ADDR DST-IP-WILDCARD | host DST-IP-ADDR | any} { DST-MAC-ADDR DST-MAC-WILDCARD | host DST-MAC-ADDR | any} [vlan OUTER-VLAN[inner INNER-VLAN]] [[precedence PRECEDENCE] [tos TOS] |dscp DSCP] [time-range PROFILE-NAME]

In R2.0, the "protocol" parameter changes to optional

- the following commands
 - [sn] {permit | deny} tcp [vlan out [inner in]] {source source-wildcard
 | host source | any} {source-mac-address mask | host
 source-mac-address | any} [operator port]] {destination
 destination-wildcard | host destination | any}
 {destination-mac-address mask | host destination-mac-address | any}
 [operator port] [precedence precedence] [tos tos] [fragments]
 [time-range time-range-name] [tcp-flag]
 - [sn] {permit | deny} udp [vlan out [inner in]] {source source-wildcard | host source | any} {source-mac-address mask | host source-mac-address | any} [operator port] {destination destination-wildcard | host destination | any} {destination-mac-address mask | host destination-mac-address | any} [operator port] [precedence precedence] [tos tos] [fragments]

[time-range time-range-name]

[sn] {permit | deny} icmp [vlan out [inner in]] {source source-wildcard
 | host source | any} {source-mac-address mask | host
 source-mac-address | any} {destination destination-wildcard | host

The R2.0 version removes the support for configuring "fragment" parameter for TCP/ UDP/ ICMP command. If users need to configure the "fragment" parameter, they need to use "Protocol" ACL to accomplish it. 26. QoS commands

 match {access-group ACCESS-LIST-NAME | ACCESS-LIST-ID} changes to

match {access-group name ACCESS-LIST-NAME}

R2.0 does not support ACL index and add a keyword name for this command. If all configuration file are saved and then upgrade to R2.0, switch will convert the

command to new format automatically mls qos map dscp-cos DSCP-LIST to COS-VALUE in Global Configuration mode changes to Interface Configuration mode police sr-tcm BPS [bc BURST-NORMAL] [be BURST-MAX] conform-action ACTION exceed-action ACTION [violate-action ACTION] and police rate BPS BURST [exceed-action ACTION] change to police KBPS [BURST-NORMAL] [BURST-MAX] [conform-action ACTION] exceed-action ACTION [violate-action ACTION] police tr-tcm cir CIR [bc CONFORM-BURST] pir PIR [be PEAK-BURST] [conform-action ACTION [exceed-action ACTION [violate-action ACTION]]] changes to police cir CIR [bc CONFORM-BURST] pir PIR [be PEAK-BURST] [conform-action ACTION] [exceed-action ACTION [violate-action ACTION]] queue QUEUE-ID bandwidth MIN-BANDWIDTH-KBPS and MAX-BANDWIDTH-KBPS change to queue QUEUE-ID rate-limit MIN-BANDWIDTH-KBPS MAX-BANDWIDTH-KBPS hol_prevention is removed as this function will always be enabled in R2.0 the following commands show mls qos interface [INTERFACE-ID] show mls qos rate-limit [interface INTERFACE-ID [, |-]] show mls qos scheduler [interface INTERFACE-ID [, |-]] show mls gos maps dscp-cos are combined to show mls qos interface [INTERFACE-ID [, |-]] { cos | scheduler | trust | rate-limit | queue-rate-limit | dscp-mutation | map {dscp-color | cos-color | dscp-cos} } the following commands show mls qos interface [INTERFACE-ID] [policers] show policy-map [POLICY-NAME [CLASS-MAP-NAME]] are combined to show policy-map [POLICY-NAME | interface INTERFACE-ID] R2.0 does not support CLASS-MAP-NAME optional parameter • show interface [*INTERFACE-ID* [, | -]] priority-flow-control changes to show interfaces [INTERFACE-ID [, | -]] priority-flow-control • qcn cnpv CNPV-PRIORITY-VALUE [cp-creation { enable | disable }] changes to qcn cnpv CNPV-PRIORITY-VALUE [cp-creation { auto-enable | auto-disable }]

dlinklareen

27. OSPFv2 commands
• area <area_id></area_id>
is removed as the area id can be created by other command
 route-preference ospf {intra-area <value> inter-area <value> </value></value>
external-1 <value> external-2 <value>}</value></value>
changes to
distance ospf { inter-area intra-area external-1 external-2 } <value></value>
 ip ospf authentication [{message-digest null}]
changes to
ip ospf authentication [message-digest] 28. BGP commands
 route-preference {ibgp ebgp} value
changes to
distance bgp EXTERNAL-DISTANCE INTERNAL-DISTANCE 29. VRRP commands
 vrrp vrid critical-ip ip-address
changes to
vrrp VRID track critical-ip IP-ADDRESS
30. RIP commands
 route-preference <value></value>
changes to
distance <distance></distance>
• ip rip receive enable and
ip rip send enable
change to
passive-interface {default INTERFACR-ID} 31. Protocol Independent commands
 clear ip route and
show ip ecmp load-balance
are changed to RD level commands
 the following commands
 route-preference [vrf vrf-name] default value
 route-preference [vrf vrf-name] static value
are changed to
 distance [vrf VRF-NAME] {static default} DISTANCE
 ip ecmp load-balance [{sip crc32_lower crc32_upper} dip port](1) changes to
<pre>ip route ecmp load-balance [{sip crc32_lower crc32_upper} dip port]</pre>
 show ip route-preference is replaced by show running-config
 show ip route [vrf vrf-name] [network [net-mask]] [{count connected
static rip ospf bgp weight}]
changes to
show ip route [vrf VRF-NAME] [[ip-address [mask] protocol] hardware]
show ip route summary [vrf VRF-NAME]

dlinkigreen

32. VLAN commands mac-base MAC-ADDRESS [priority COS-VALUE] in VLAN Configuration Mode changes to mac-vlan MAC-ADDRESS vlan VLAN-ID [priority COS-VALUE] in Global **Configuration Mode** subnet-base { NETWORK-PREFIX /PREFIX-LENGTH | IPV6-NETWORK-PREFIX /PREFIX-LENGTH } [priority COS-VALUE] in VLAN **Configuration Mode** changes to subnet-vlan { ipv4 NETWORK-PREFIX NETWORK-MASK | ipv6 IPV6-NETWORK-PREFIX / PREFIX-LENGTH } vlan VLAN-ID [priority COS-VALUE] in Global Configuration Mode switchport native vlan VLAN-ID changes to switchport hybrid native vlan VLAN-ID and switchport trunk native vlan { VLAN-ID | tag } 33. GVRP commands gvrp changes to gvrp global in Global Configuration Mode and gvrp enable in Interface Configuration Mode forbidden vlan VLAN-ID [,|-] changes to gvrp forbidden {all | VLAN-ID [, | -] | {add | remove } VLAN-ID [, | -] } 34. Problem Fixed

dlinkigreen

Firmwar Version	re Problems
	 Fix the issue that when PC pings DXS-3600's IPv6 prefix address, not the switch's address, the switch still replies OK instead of ignoring it. (DUSA2013030900002)
	 Fix the issue that the configuration file cannot be transmitted completely via FTP server (DI20130108000006, DI20130313000001)
	 Fix the issue that when user enables VRRP and DHCP Relay on DXS-3600, if DHCP client sends a DHCP request to DHCP server, the server will receive duplicated DHCP request packets. (DI20130304000009, DI20130307000006, DI20130307000011, DI20130307000014, DI20130308000010, DI20130308000011)
V2.00.02	 4. Fix the issue that when customer enables both Q-in-Q VLAN Translation and DHCP Relay service, DXS-3600 will not replace the VLAN ID. (HQ20130327000020)
	 Fix the issue that when enables AAA local authentication for console port; user does not need to enter the user name and password when trying to access the switch via console port. (DRU20130415000001)
	 6. Fix the issue that clients cannot get IP address when sending DHCP renew packet to DHCP server, the root cause is that DXS-3600 will filter the unicast DHCP renew packet when DHCP service is enabled. (DEUR20130415000008)
	 Fix the issue that the modified port speed cannot be saved to configuration file if there's no "duplex" parameter followed the port speed modification command. (DUSA2013053000004)
	 Fix the issue that when enabling Q-in-Q function, IGMP Snooping will not work.(DRU20120322000008)
V1.10.02	 2. Fix the issue that when configuring TACACS key string via CLI, the key will be incorrect bug. (DRU2012032900002)

- 3. Fix the issue that when executing command "show running-config", the display speed of pressing space bar for "next page" will be faster than the speed with "all" parameter in the command. (DEUR20120627000006)
- 4. Fix the issue that when customer tries to connect to the switch via ssh protocol and needs to transmit lots of data by SSH server, such as executing "show log" or "show tech_support", the server will fail to transmit data to client and the client will also display "Incorrect MAC received on packet" error message. (DRU20120622000001)

V1.00.024 First release

* D-Link tracking number is enclosed in ()

Known Issues

	Firmware Version	Issues	Workaround
	V2.00.023	 When executing "show environment" command, the display of "Detail Power Status" will show "Internal Power" and "External Power" instead of "Power 1" and "Power 2". 	It's a display bug and will not affect the whole function. This issue will be fixed in next release.
		 Some of the CLI commands' format is different between R1.10 and R2.00. Users cannot execute the R1.10 original command in R2.00 version. 	In order to prevent the previous configuration file missed after upgrading the firmware version to R2.00. Users can save the configuration files first before processing the upgrade.
		 CVE-ID: CVE-2013-0149 Due to the ambiguous definition in OSPF protocol as specified in RFC2328, the attacker can send a false Link State Advertisement (LSA) which will evade the fight-back mechanism so that the LSA may be accepted and propagated by a "genuine" router on the network. 	 Enable MD5 authentication for OSPF Enable OSPF Passive Interface to stop sending or receiving routing table update on interfaces that do not participate in OSPF Enable MAC-based Access Control (MAC) to authenticate devices before they are able to communicate with the network
