

DUB-T210 TV tuner / video capture How To Record Video

Double click on the shortcut to the TV PLUS software.

Once the program is launched you will see the following screen, click on the TVR button, this will launch the capture program.

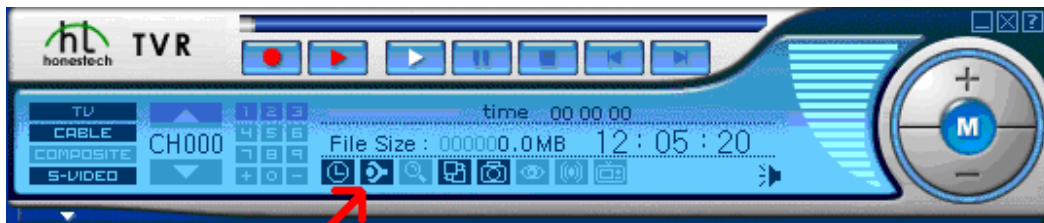

You should now be given the following display panel, please select your input type, in most cases this will be "Composite" as shown:

Once selected you should see the image in a separate screen as shown below

If the image is not displayed please choose the region settings by clicking the  button on the control panel:

The following options will become available

Once all is displayed in the viewing box, you are now ready to Record. To start recording click on the  button on the control panel:

To stop recording please hit the  button once more, and your movie will now be saved and shown below the control panel, as shown in the next screen.

The default save directory can be found under the Tools option in the Record Settings box.
