DDNS

DDNS SETTINGS :

The Dynamic DNS feature allows you to host a server (Web, FTP, Game Server, etc...) using a domain name that you have purchased (www.whateveryournameis.com) with your dynamically assigned IP address. Most broadband Internet Service Providers assign dynamic (changing) IP addresses. Using a DDNS service provider, your friends can enter your host name to connect to your game server no matter what your IP address is.

[Sign up for D-Link's Free DDNS service at www.DLinkDDNS.com.](http://www.DLinkDDNS.com)

DDNS SETTING :

DDNS Enable Disable

Server Address <<

Host Name (e.g.: me.mydomain.net)

Username or Key

Password or Key

Verify Password or Key

Timeout (hours)

Status **Disconnected**

Helpful Hints..

To use this feature, you must first have a Dynamic DNS account from one of the providers in the drop down menu.
