D-Link Model Name: DSL-2885A Hardware Version: A1 Firmware Version: 1.00.04

### Welcome

Internet — DSL-2885A — Wi-Fi Client

This wizard will guide you through a step-by-step process to configure your new D-Link device.

- Step 1: Install your device
- Step 2: Configure your Network and Wi-Fi settings
- Step 3: Set your router password

English

http://192.168.1.1/Wizard\_Manual.html

D-Link Model Name: DSL-2885A Hardware Version: A1 Firmware Version: 1.00.04

### Install

Please plug one end of the grey phone cable included with your device into the port labeled DSL on your device. Plug the other end of this cable into your wall mounted phone jack. If you live in AU or NZ, you will need to connect the microfilter splitter that we supplied to your wall mounted phone jack first. Then connect the grey phone cable to the DSL port on the microfilter splitter.

Your Device

### Configure Your Internet Connection

Internet — DSL-2885A — Wi-Fi Client

Please select your Internet connection type below:

- DHCP Connection (Dynamic IP Address)**  
Choose this if your Internet connection automatically provides you with an IP Address. Most cable modems use this type of connection.
- Username/password Connection (PPPoE)**  
Choose this option if your Internet connection requires a username and password to get online. Most DSL modems use this connection type of connection.
- Static IP Address Connection**  
Choose this option if your Internet Setup Provider provided you with IP Address information that has to be manually configured.

### Wi-Fi Settings

**Internet** — **DSL-2885A** — **Wi-Fi Client**

To setup a Wi-Fi network you will need to give your Wi-Fi network a name (SSID) and password.

**2.4GHz Wi-Fi Network Name:**

**5GHz Wi-Fi Network Name:**

The Wi-Fi Network Name is up to 32 characters. You will need to join your Wi-Fi network using this Network Name (SSID).

**2.4GHz Wi-Fi Password:**

**5GHz Wi-Fi Password:**

The password must contain at least 8 characters. You will need to join your Wi-Fi network using this password.

## Internet

 Use this section to configure your Internet Connection type. There are several connection types to choose from Static IP, DHCP, PPPoE, PPPoA, and Bridged. If you are unsure of your connection method, please contact your Internet Service Provider. Note: If using the PPPoE option, you will need to remove or disable any PPPoE client software on your computers.

## Time

Your router's internal clock is used for data logging and schedules for features. The date and time can be synchronized with a public time server on the Internet, or set manually.

Management >> System Time

[Schedule](#)

### Time Configuration

Time Zone:

Time: 2016/01/01 03:40:00 PM

NTP Server:

## Schedule

Some features, such as the firewall and website filters, can be turned on or off based on a schedule. One common use of schedules is to control access to the Internet by a specified device during specified time periods.

# System Log

On-board diagnostics run continually in the background to monitor the health of your router. The results are recorded in the system log if it is enabled. This info can be used to diagnose common problems or help Customer Support resolve issues more quickly.

## System

This page lets you save your router's current settings to a file, restore your settings from a file, restore your router to factory default settings, or reboot the device. Please note that restoring the settings to the factory defaults will erase all settings, including any rules you have created.
