(1) Connecting The DSA-3100 To Your Network

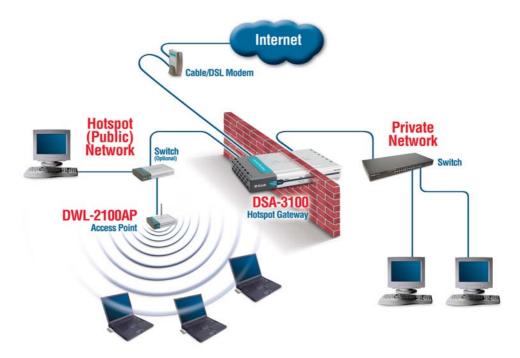

1 Connecting The DSA-3100 To Your Network (continued)

- A. Power on the DSA-3100.
- B. Connect an Ethernet cable from the Public LAN port to a switch or wireless access point on your public network. The Public LAN LED will illuminate to indicate a proper connection. If the Public LAN LED doesn't light up, please check the connections.
- C. Connect an Ethernet cable from the **Private LAN** port to an Ethernet port on your private network's switch. If properly connected, the Private LAN LED will illuminate. (*Note: For configuration purposes a computer can be connected directly to this port using a standard Ethernet cable*)
- D. Attach an Ethernet cable to the WAN port on the back panel of the DSA-3100. Connect the other end to a router or directly to a broadband modem. The WAN LED light will illuminate to indicate proper connection.

When you have completed the steps in this *Quick Installation Guide*, your connected network should look similar to this:

Using The Setup Wizard

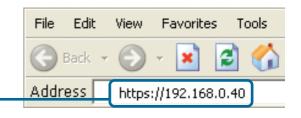

Connect the computer you will be using for configuration to the Private Network or directly to the Private LAN Port.

To obtain a new IP address from the DSA-3100 you may need to restart your computer or release and renew your IP address. Make sure that the network adapter in your computer is configured properly. Instructions for configuring the network adapter to obtain an IP address automatically from the DSA-3100 can be found in the Appendix.

The DSA-3100 provides Web based configuration. You can configure your DSA-3100 using a Web browser such as Internet Explorer or Netscape Navigator in Windows, Macintosh, or UNIX based environments.

Open your Web browser and type https://192.168.0.40 into the URL address box. Then press the Enter or Return key.

Be sure to use **https** instead of http when typing in the URL address. This ensures that a secure connection is made between your system and the DSA-3100.

(The IP Address shown in the example above is the default setting. If you've changed the IP Address of the DSA-3100 to conform to a network then input that IP Address instead of the default IP Address.)

Enter a User Name and Password information as necessary. User Accounts can be restricted to specific MAC addresses if desired. Click Add after entering each User Account. Repeat this step for each user.

Click Restart

Using The Setup Wizard (continued)

Setup Wizard Complete

Click **Restart** to complete your configuration.

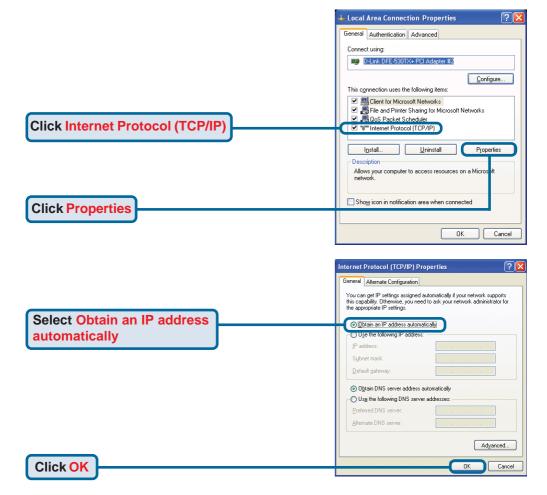

Appendix - IP Configuration

To connect to the network, make sure the network adapter in your computer is configured properly. Here's how to configure the network adapter to obtain an IP address automatically from the DSA-3100 *Air*spot[™] Public/Private Gateway.

Microsoft Windows XP:

Go to Start > right click on My Network Places > select Properties > Right-click on the Network Connection of the Ethernet adapter connecting to the DSA-3100 and select Properties.

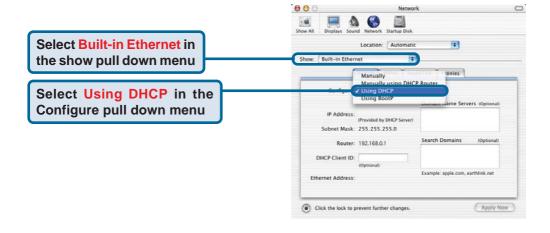

Appendix - IP Configuration (continued)

Apple Mac OS X:

Go to the **Apple Menu** and **Select System Preferences.**

000

The IP address information, the Subnet Mask, the DSA-3100 IP address and the Ethernet adapter address will appear.
